4-1005.2 Assist Audit Approach

4-1006 Audits Performed by Foreign Auditors Under Reciprocal Agreements

4-000 General Audit Requirements **

4-001 Scope of Chapter **

This chapter presents general guidance and basic auditing concepts and techniques to assist the auditor in accomplishing the objective of contract auditing. Amplification of this guidance will be found in later chapters and appendixes.

4-100 Section 1 - FAO Coordination with Procurement and Contract Administration Personnel **

4-101 Introduction **

This section presents guidance on general coordination with procurement and contract administration personnel. It is important for the auditor to be familiar with the specific services DCAA provides and how to coordinate with the customer throughout the planning and execution of audits, as detailed throughout CAM (based on the type of audit and audit objectives). For example, CAM Chapter 9 includes this information for audits of cost estimating and pricing proposals.

4-102 Coordination with Contractor and Government Contract Administration Personnel **

a. The maintenance of effective communications and interface with the people with whom DCAA is involved on a day-to-day basis is an important aspect of the audit function and is referenced in various sections of CAM.

b. Periodic visits are made to various field audit offices by DCAA regional/CAD personnel (RD/CAD, DRD/DCAD, RAM/CAM) in conjunction with reviews of the adequacy and status of audits performed by such FAOs. Occasional visits are also made to FAOs by members of the DCAA Headquarters staff in connection with their assigned duties. In view of the importance of effective communication, regional/CAD and Headquarters personnel should, during visits to

FAOs, make a reasonable attempt to arrange for meeting with appropriate contractor and Government contract administration officials. The primary purpose of such meetings is to provide contractor and Government representatives with an opportunity to express their views on relationships with DCAA and any significant developments or problems where DCAA may be involved or be able to provide assistance. In addition, it is expected that significant audit matters and problems requiring the cooperation or assistance of contractor or Government contract administration personnel would be discussed at these meetings. Discussions should be informal and conducted with an objective of mutual benefit.

c. In the case of visits to branch offices, it is contemplated that contacts would ordinarily be limited to contractor representatives at suboffices visited and Government contract administration offices in the same locality as the branch offices or suboffices visited.

d. The FAO should work with the appropriate FLA to facilitate discussions with the buying command on significant or sensitive proposals identified or potential high-risk areas that are of concern to the contracting officers. FAOs should present the results of recently completed audits at the contractor, identified deficiencies in the estimating system, and how DCAA can provide support in a timely and effective manner.

e. Throughout each audit assignment maintains effective communication with Government contract administration personnel on significant matters, as necessary. Such communication alerts officials to matters needing immediate attention and allows them to take corrective action before the final report is completed. Document all discussions in the working papers, including date, participants' names and titles, and primary discussion points.

4-103 FAO Participation in Procurement Meetings Prior to Receipt of Audit Request **

The FAO should continue to identify and monitor the individual pricing proposals the contractor expects to submit, as well as the services government procurement representatives expect to request. Pertinent information includes the nature of the procurement (competitive or sole source), expected date of proposal submission, solicitation clauses, and estimated dollar value. The intent is to obtain a complete and accurate understanding of the pricing activity for the contractor.

a. Prior to receiving an audit request, auditors may be invited by procurement representatives responsible for major procurements to attend meetings between the various stakeholders, e.g., the buying command, DCMA and the contractor. These meetings may occur early in the process, even before the contracting officer initiates a request for proposal (RFP). Auditors may participate in such meetings for the purpose of discussing general issues related to the procurement such as procurement schedule requirements, expectations on timely contractor support, and the identification of expected major subcontracts. In addition, auditors may provide general advice on what constitutes an adequate proposal and explain the [FAR 15.408](#) (Table 15-2) requirements for adequate certified cost or pricing data. Auditor participation in meetings held for these purposes does not impair auditor independence.

b. However, auditors are reminded that DCAA does not participate in meetings established to discuss proposal development, or review or provide input on draft proposals, which is a common practice for members of integrated product teams (IPTs). Regardless of the circumstances, auditors should always refrain from comments that could be construed as advising the contractor on how to develop its proposal. For example, auditors should not advise the contractor on

specific methodologies for developing a cost element included in its proposal. However, auditors may advise the contractor that to be adequate, the proposal must include an explanation of the estimating process, including judgmental factors and the methods used in the estimate of that cost element.

c. Prior to accepting an invitation to such meetings, the FAO should discuss these ground rules for DCAA participation with the procurement representative. In addition, the auditor should discuss the ground rules at the start of the meeting so that other attendees are aware of the limitations for DCAA participation.

d. The FAO's participation in procurement meetings should be documented in a memorandum for record (MFR).

4-104 Establishing the Engagement/Acknowledgment/Notification Letter [](#)**

a. Upon receipt of the audit request, the auditor should hold discussions with the requestor before beginning the audit to gain a clear understanding of the requestor's needs, to identify specific areas of concerns, and to discuss how DCAA can best meet those needs and address the requestor's concerns while complying with GAGAS. In some cases DCAA may be asked to perform an audit of only part(s) of a proposal rather than the entire proposal. The FAO should accept requests for audits of part(s) of a proposal. However, if the auditor is aware of risk factors that indicate additional part(s) or the entire proposal should be audited, the auditor should discuss those risks with the contracting officer and follow the procedures in 9-108.

b. The auditor should acknowledge the request in writing (via e-mail) within five days of receipt. If the risk assessment is not complete, the e-mail should document the conversation from paragraph a. and indicate we will furnish an acknowledgment letter once the risk assessment is complete and we have coordinated an agreed-to date with the requestor. Buying Commands have stressed that they want a realistic date upfront so they can plan the procurement and schedule the additional actions required before contract award. Therefore, in establishing an agreed-to date, the audit team should consider risk factors for the particular contractor and the engagement, and allow time for the necessary procedures and reviews. Other factors for consideration include: experience of the auditor, scheduled leave, and holidays. After considering these factors, the audit team should coordinate with the requestor to establish a mutually agreed-to date. Milestone plans can be a useful tool for the audit team to use in developing realistic due dates. Milestone plans are required for audits of all high risk proposals, major contractor incurred cost submissions, significant claims/terminations, and business system audits, but can be used as deemed necessary for other assignments as well. If the timeframe for completion identified by the audit team varies significantly from the needs of the requestor, the coordination of an agreed-to date may require involvement of regional management with the requestor and their chain of command.

Once the risk assessment is complete, the FAO should issue an acknowledgement letter which includes the agreed-to report date and details regarding the scope of the services to be provided and other information required by GAGAS 7.09 (see [2-305](#)). The pro forma memo delivered by CaseWare (Acknowledgment – Notification to ACO.doc) meets the GAGAS requirements and should be used. That document is also available on the DCAA Intranet. For requested audits, the risk assessment should be completed as promptly as possible after receipt of the request and the walkthrough of the proposal/submission by the contractor (see 4-302.1c).

c. After committing to an agreed-to date, everyone involved in the audit needs to make every effort to ensure that we provide the audit on or before the date. The auditor should provide the completed working paper package for review with sufficient time to allow for completion of the necessary reviews. Independent reference, supervisory and other management reviews also should be completed in a timely manner to ensure that we meet the agreed-to date.

d. If the proposal is inadequate but the requestor still wants an audit of that proposal, auditors should follow the guidance in [9-205d](#).

e. For audits that are not requested (e.g., incurred cost audits, postaward audits, and audits of contractor business systems), the auditor should contact the contracting officer to notify him/her of the audit commencement and discuss any concerns or other information that the contracting officer might have relevant to the audit. In addition, after the risk assessment is completed, a notification letter should be electronically transmitted to the planned recipient(s) of the audit report (using the pro forma memo Acknowledgment – Notification to ACO.doc which is delivered by CaseWare).

f. Requests for agreed-upon procedures should be acknowledged using the AUP pro forma memo (DCAA_Acknowledgement_Letter_-_Agreed_Upon_Procedures.doc) which is delivered by CaseWare and is also available on the DCAA Intranet. Before issuing the acknowledgement letter, follow the guidelines in [14-1002.3](#), Establishing an Agreement on the Terms of the Engagement.

g. Relevant discussions and meetings held during this phase of the audit should be documented in the working papers (e.g., discussions with the requestor/contracting officer regarding the clarification of the request and specific concerns).

4-105 Interim Discussions [](#)**

a. Continuous communication throughout the audit keeps the requestor/contracting officer informed of major preliminary audit issues and problems. Prior to such discussions, the auditor should coordinate with the supervisor to ensure there is agreement on the audit position. Since the audit is not completed, the auditor should not provide an audit opinion during these interim discussions but should clearly communicate the status of the audit to the requestor.

b. As discussed in 4-104, the audit team will consider the risk assessment, the audit scope and the Contracting Officer's needs and coordinate an agreed-to due date for the engagement. If for any reason we are unable to meet an agreed-to due date, the auditor or supervisor should call the requestor as soon as he or she knows it will not be met, and request an extension and assistance in resolving contractor delays as necessary.

c. Occasionally, before an audit is completed, the requestor may ask the FAO to cancel the audit or change the scope of the audit or type of engagement (e.g., to an agreed-upon-procedures engagement, examining parts of a proposal or providing specific cost information). In certain limited cases, this may be appropriate, for example, if there is a change in circumstances that affects the requestor's requirements or there was a misunderstanding about the nature of the original services or alternative services originally available. However, before an auditor agrees to a contracting officer's request to convert or cancel an engagement (e.g., agreed-upon procedure, examination, providing rate information or other advisory service), the FAO should consider the reason given for the request, especially if the audit procedures are substantially complete. Under no circumstances should DCAA agree to a contracting officer's request to cancel or convert an

engagement to avoid a scope limitation, the reporting of an adverse or qualified audit opinion, or any other result that may be considered unfavorable. Generally, any changes that the requestor wants to make to their original request should be provided to the FAO in writing. The FAO should discuss the matter with the requestor to obtain a clear understanding of the reason for the request and explain any concerns regarding risk to the Government. The verbal discussion should generally be followed by written confirmation, either concerning the changes to the engagement that the FAO believes are appropriate or the reason why the change cannot be made. In addition, the matter should be elevated if necessary to resolve any differences.

d. All interim discussions with the contracting officer including coordination of a due date extension should be documented in the working papers. That documentation should include the date, participants' names and titles, and primary discussion points. As discussed above, some discussions should be confirmed in writing to the requestor/contracting officer.

4-106 Exit Conferences and Release of Draft Audit Reports **

a. The auditor should invite the requestor/contracting officer to the exit conference, especially if there are major or complex audit issues. The information provided to the contractor at or in anticipation of the exit conference (i.e., draft report/results or, in the case of forecasted costs subject to negotiations, factual information) should be provided concurrently to the requestor/contracting officer. (See 4-304 for guidance on exit conferences.)

b. The FAO manager may approve the release of the draft audit report on a proposal to the contracting officer after the exit conference when it is anticipated that the final report will be issued shortly. Such release may be made before the FAO manager completes the final review; if the FAO manager believes it is appropriate based on his/her involvement with the audit, and/or the complexity of the audit and the experience of the audit team. This allows the contracting officer to start developing the negotiation position, pending the issuance of the final report. The draft report should be clearly marked draft and also include the following or a similar statement "Subject to change based on final management review until the final report is issued". This draft report can be issued in Microsoft Word password protected format.

4-107 Post Issuance Support **

After the audit report is issued, auditors should provide the contracting officer assistance as needed to understand the audit conclusions and rationale. Providing such assistance is a normal part of any audit and does not impair an auditor's independence. Such assistance may involve answering questions informally, attending or otherwise supporting negotiations or attending DCMA Boards of Review. Documentation of support of negotiations or Boards of Review should be prepared in accordance with [15-404](#) and [1-403.4](#), respectively, and file the documentation in the "Post-Lockdown Documents" folder generated by CaseWare in the same folder with the official audit working paper files (see 4-407d(7)). Detailed guidance on supporting negotiations is at [15-400](#) and on attending Boards of Review at 1-403.4.

4-108 Negotiation Memorandum and Findings on Appeals **

a. FAR provides that the contracting officer shall forward to the cognizant DCAA auditor one copy of the negotiation agreement (e.g., price negotiation memorandum (PNM) ([FAR 15.406-3\(b\)](#))), Memorandum of Disposition of Post-award Audits ([FAR 15.407-1\(d\)](#)), and Final Determinations on Contractor Appeals to DCAA Forms 1. In order to be timely and fully responsive to the needs of DoD management in providing information on audits, negotiations,

etc., all field audit offices will establish formal follow-up procedures to ensure that copies of these contracting officer advices are timely received and promptly reported in the status reports required by Headquarters. For a contract awarded under competitive negotiation procedures, a PNM may not be prepared, but the information required by [FAR 15.406-3\(a\)](#) should be reflected in the evaluation and selection document, to the extent applicable, and forwarded to the cognizant audit office that provided assistance.

b. If the negotiation agreement (e.g., PNM) provided for by [FAR 15.406-3\(b\)](#) is not received by the auditor within 90 days following issuance of the audit report, and negotiations are known or expected to be completed (for price proposals, questioned costs should exceed \$500,000 to warrant follow-up unless the pricing action has been selected for a defective pricing audit), the field audit office will request a copy of the document directly from the cognizant procurement or administration activity with a copy of the request to the FLA. If necessary, the field audit office should issue a second follow-up request, identified as such, within 90 days of the first follow-up request for the PNM. Upon receipt of the second follow-up request, the FLA will become responsible for all further follow-up until the contracting officer distributes the PNM. Where the FLA encounters a continuing problem with timely distribution of PNMs, and corrective action is not effected, the FLA should elevate the matter for resolution by the region with its counterparts in the acquisition or administration activity.

c. Those activities with FLAs are listed in the [FLA Locator](#) on the DCAA Intranet site.

d. Auditors at subcontractor locations also require similar information relating to prime contractor or higher tier subcontractor negotiations with subcontractors. This information is needed for postaward auditing, assessing performance, and reporting purposes. The auditor at the prime contractor or higher tier subcontractor location should ensure that maximum support is given to subcontract auditor requests. In the event a contractor refuses to release the information for use outside its organization, it will be necessary for the auditor at the prime contractor or higher tier subcontractor sites to review the subcontract file and report pertinent information to the subcontract auditor.

e. Follow-up is required for copies of Final Determination on Contractor Responses to DCAA Forms 1. CAM [6-908c](#) states that the auditor must have received a copy before a resubmission voucher can be processed.

4-200 Section 2 - Contractor Internal and External Audits [](#)**

4-201 Introduction [](#)**

This section provides direction for requesting, using, and monitoring access to contractor internal and external audits.

For detailed guidance concerning requests for contractor internal audit reports, refer to [DCAA Instruction 7640.17](#) 'Procedures for Requesting Access to Contractor Records and Internal Audit Reports, for Subsequent Contractor Denial of Records, and for Coordination with Regional Offices, Corporate Audit Directorates, And Headquarters, Policy and Plans', available in the DCAA Intranet Library.

4-202 Access to Contractor Internal and External Audits [](#)**

a. The auditor's evaluation of a contractor's compliance with DFARS 252.242-7006 Accounting System Administration may disclose, particularly at a major defense contractor

location, that a contractor maintains a highly professional internal audit staff. In addition, the majority of larger contractors also engage an external public accounting firm to conduct an audit of their financial statements. While these internal and external auditors' final audit objectives are not the same as DCAA's, the information contained in their reports may be useful to DCAA in the course of our audits.

b. The Yellow Book advises that when planning the engagement, the audit team should ask the management of the audited entity to identify previous audits, attestation engagements, and other studies that directly relate to the subject matter or an assertion about the subject matter of the examination engagement being undertaken. This should also, include whether related recommendations to previous finding have been implemented. The audit team should use all of this information in assessing risk and determining the nature, timing, and extent of current work. The team will also use this to determine, the extent to which testing the implementation of the corrective actions is applicable to the current examination engagement objectives.

The audit team, as part of the risk assessment, should coordinate with the FAO point of contact (POC) for internal audits. If the office does not have a POC the auditor should ask contractor management if any internal audits were performed and request a summary listing of the internal audits that would assist in understanding and evaluating the efficacy of the internal controls relevant to the subject matter of the audit. If relevant internal audits are identified the auditor should follow the guidance below when requesting internal audit reports. The Yellow Book advises that the auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that could have a material effect on the subject matter, or an assertion about the subject matter, of the examination engagement.

c. SEC registered public companies are subject to additional certification and reporting requirements as a result of the [Sarbanes-Oxley Act of 2002](#). These companies are required to certify to the financial and other information contained in the quarterly and annual reports filed with the SEC, and are to include with their annual filing, a report of management on the company's internal control over financial reporting. They are also required to include with the annual report the independent auditor's attestation report on management's assessment of the company's internal control over financial reporting. As a result, public companies and their independent auditors may now perform additional audit effort to support the certification and reporting requirements. Auditors should be aware of the potential for increased opportunities in reviewing these audits as part of their audit risk assessment.

d. DCAA Instruction 7640.17 discusses DCAA's documentation and safeguarding responsibilities required by the [2013 National Defense Authorization Act \(NDAA\)](#). DCAAI 7640.17 also provides detailed procedures and reporting information regarding requests for contractor internal audit reports.

The 2013 NDAA Section 832 requires DCAA maintain appropriate documentation of requests for access to defense contractor internal audit reports. Refer to DCAAI 7640.17 for documentation DCAA is required to maintain.

e. The NDAA also requires DCAA include appropriate safeguards and protections to ensure that we do not use the contractor internal audit reports for any purpose other than understanding, evaluating, and testing the efficacy of contractor internal controls and the reliability of associated contractor business systems. DCAA should handle internal audits obtained from contractors in

accordance with the procedures outlined in [1-507](#), Security Requirements for Contractor Information, as well as the additional safeguarding requirements below.

f. In order to meet the requirements of the 2013 NDAA, and, with reference to the procedures outlined in DCAAI 7640.17, the following reporting requirements and safeguards over contractor internal audits are established.

(1) Corporate Audit Directorates (CADs) and Major Contractor Offices. CAD offices and FAOs at major contractor locations will establish a central point of contact (POC) and a process to obtain and monitor access to and use of internal audit reports. If a segment of a CAD has its own internal audit department, the local FAO responsible for that segment should designate its own POC. The segment POC should coordinate with the overall CAD POC to ensure no duplication of effort. The segment POC must also support any segments reporting to their segment. The semi-annual report for each CAD location should include all documentation related to that CAD; therefore, POC's at segment locations must be sure to provide the documentation necessary to the CAD POC prior to the end of the reporting period (see g below). The process to obtain and monitor access to and use of internal audit reports will include a method for tracking requests for internal audit reports and working papers, when needed, and the contractor's disposition of these requests. The central point of contact will:

(a) Coordinate with the contractor and obtain a semi-annual summary level listing of all internal audit reports issued. The summary document should contain sufficient descriptions to ascertain whether the internal audit may affect Government contracts.

(b) Review the summary list of internal audits and use the list in discussions with the contractor to identify internal audits that are relevant to the subject matter of the DCAA audits. If the summary is not adequate to determine which internal audits may affect Government contracts, coordinate with the contractor to obtain the necessary information.

(c) Provide the summary list to the CAD or the FAO's audit teams responsible for audits of the contractor for use when inquiring about relevant internal audits during the audit entrance conference as part of the risk assessment.

(d) Send a request to the contractor for access to the internal audit reports and/or working papers considered pertinent for performing the audit and coordinate with the contractor to obtain access to the internal audit report (i.e. some contractors provide copies of the reports; others provide access to the report for the purpose of taking notes.). The request should describe the scope of the DCAA audit. It should explain why the internal audit would assist in: 1) understanding and evaluating the efficacy of the internal controls; and 2) assessing risk for the controls relevant to the audit. Additionally if the contractor provided a copy of the report to DCAA for a prior audit, the request should seek the contractor's agreement for the point of contact to provide access to the report for the current audit.

(e) Safeguard the internal audit report or notes taken on the content of the report (see [1-507](#) for more information on handling contractor proprietary information).

(f) Implement a process to track auditor's requests for internal audit reports and the contractor's response to the requests.

(g) Provide the CADs and Regions a semi-annual summary of all requests for internal audit reports. The summary should be grouped by contractor and include the contractor's response to each request, the audit assignment that required access to the internal audit report,

and the usefulness of the internal report. If a CAD segment is tracking and monitoring at a local FAO, their semi-annual summary must be provided to the overall CAD POC to allow sufficient time for consolidation and submission to Headquarters by the due date discussed in f(2) below.

(2) CADs and Regional Offices. The CADs and Regions will consolidate the POCs submissions by contractor. The consolidated CAD and Regional semi-annual reports are due to Headquarters on June 1st and December 1st (email to DCAA-PAS@dcaa.mil). The June 1st report should include information on requests still open from prior periods and new requests through April 30th. The December 1st report should include information on requests still open from prior periods and new requests through October 31st.

(3) Field Offices. The FAO audit team will:

(a) For Major contractors, comply with the guidance in (1)(g) above and DCAAI 7640.17.

(b) For non-major contractors, a formal tracking process or a central point of contact is not mandatory. However, when requesting access to internal audit reports auditors should comply with the requirements of the 2013 NDAA discussed in paragraph d and the guidance in paragraph f(3)(a) through (d) above.

4-203 DCAA Response to Accounts Receivable Confirmation Requests from CPA Firms **

a. Auditors occasionally receive requests from CPA firms to confirm the amounts represented by their clients as receivables due from the Government. These requests normally apply to contracts where provisional approval for interim payment of costs incurred to date is DCAA's responsibility. Confirmation of receivables is a generally accepted auditing procedure whereby the CPA seeks to verify the existence and accuracy of the dollar amounts reported as accounts receivable on the contractor's financial statement. Under Government contracting, it may be expected that the CPA will request positive rather than negative confirmation; in either case, it is DCAA policy to acknowledge each request.

b. Contractors usually establish a receivable under cost-reimbursement type contracts, in the amount of a public voucher, at the time it is submitted to the auditor. However, we cannot reasonably determine the exact timing of contractor payment by the disbursing office or the total amounts unpaid at any prior point in time. Furthermore, public vouchers represent claims for interim payments which are provisional in nature and subject to retroactive adjustments at any time prior to approval and payment by the Government of the contractor's completion voucher. Therefore, the auditor is not in a position to issue an unqualified confirmation of accounts receivable amounts, and could not issue a qualified confirmation of outstanding billings without the disbursing office coordination.

c. A confirmation request may also include contract billings which are not subject to audit approval, such as for progress payments, economic price adjustments, or deliveries under fixed-price type contracts. It is not appropriate for DCAA to expend any effort attempting to confirm such billings.

d. Because of the above considerations, auditors will not attempt to confirm amounts claimed by contractors as due from the Government. Tactfully and promptly acknowledge a CPA's confirmation request by letter, with a brief statement as to why we are not in a position to confirm a contractor's accounts receivable. Also provide, if available, the name and address of

the Government disbursing office where additional information may be pursued if the firm so desires. For example, the acknowledgment might read:

We acknowledge receipt of your confirmation request dated August 15, 20XX, concerning amounts represented by the XYZ Company as due from the Department of the Army as of July 31, 20XX.

Until completion of a cost-reimbursement type contract and later final settlement of the costs, we are not in a position to confirm that amounts claimed by a contractor are payable under the contract. Also, under any type of Government contract, we cannot determine the unpaid billed amount at any prior point in time because we do not maintain records of payments made. If you wish to pursue confirmation of the outstanding billed amounts, we suggest that you address your inquiry to the Army Finance Office, (address).

4-300 Section 3 - Conferences with the Contractor (Entrance, Interim, and Exit) on Audit Plans and Results **

4-301 Introduction **

a. This section provides guidance on audit conferences with the contractor. It states the basic requirements for and the extent and nature of discussions during entrance, interim, and exit conferences in general and under each type of audit assignment.

b. FAOs will communicate with their contractors and contracting officers during the preparation of the requirements and future plan to identify areas of risk, including discussions related to the contractor's business systems and FAR requirements. See [3-100](#) for additional information on coordinating with contractors and contracting officers during the preparation of the requirements and future plans.

c. Guidance on annual program plan and operating plan conferences with contractors is contained in chapter [3-102](#) and [3-103](#).

d. See [2-303.2](#) or [2.503](#) for supplementary guidance for supervisory auditor and FAO manager participation.

e. Special guidance on preliminary conferences after a contract termination (before the contractor submits a settlement proposal) is in [12-205](#).

f. Conduct all discussions with contractors with objectivity and tact in a forthright, professional manner.

4-302 Contractor Conferences – Entrance **

4-302.1 General Procedures for Entrance Conferences **

a. Except as provided in 4-302.4, hold an entrance conference with the contractor's designated representative(s) at the start of each separate audit assignment (or each group of assignments to be covered in a single field visit). (See 4-302.1c regarding the "walkthrough" of the contractor's assertion that should generally take place either before or during the entrance conference.) Document the date, participants' names and titles, and primary discussion points, including specific identification of requested data to control what was requested and provided

during the audit. The significance or sensitivity of the assignment will dictate the level and number of audit personnel who should attend the conference.

b. As a minimum, explain the purpose of the audit, the overall plan for its performance including the estimated duration, and generally the types of books, records, and operations data with which the auditor will be concerned. If applicable, the following matters should be handled during or shortly after the entrance conference:

(1) Make arrangements for any necessary work space and administrative support. Primarily, this applies to mobile assignments; however, auditors in a resident office or suboffice may also need temporary space in a particular operating location to effectively accomplish the audit.

(2) Ask the contractor to designate primary and alternate officials with whom audit matters are to be discussed during the course of the assignment. However, make it clear that such an arrangement does not preclude access to other knowledgeable contractor personnel as needed during the audit. Also make it clear that these arrangements should not cause delays or extra audit work (hence the advisability of having named alternate officials to expedite the audit should the primary official be unavailable). Complex, detailed, and time consuming procedures, such as requiring all data requests be written and/or funneled through a single individual only, are an obstruction to efficient audit operations. Contractor representatives' actions which unreasonably restrain, restrict, or delay the audit should be processed using the denial of access to records procedures set forth in [1-504.5](#).

(3) Discuss, or obtain a briefing on, the contractor's proposal(s) or other cost representation(s) to clarify any preliminary questions, understand the basis of each submitted cost element, and learn the nature and location of supporting data. Follow-up on items discussed at a separate walkthrough meeting if applicable (see 4-302.1c below).

(4) Visit all office and/or plant operating areas used in performing current and proposed contract(s).

(5) Arrange to review the planning documents, working papers, and audit reports of the contractor's internal and external auditors for any audits or reviews performed or planned that should be considered as part of the DCAA audit. See 4-202 for guidance on coordinated efforts with the contractor's auditors.

(6) Arrange for any needed IT audit assistance (see 4-500).

(7) When the assignment involves a subcontractor's cost representation(s), resolve any restrictions on release of audit findings and report information to higher-tier contractor(s) according to the guidance in [9-106](#).

(8) Do not enter into written agreements with contractors, or affix concurrence signatures to contractor letters, which contain procedural arrangements that inhibit and/or delay the audit performance or restrict the reproduction of necessary supporting evidential matter.

c. At the commencement of the audit, the contractor should provide Government representatives (e.g., DCAA, ACO, and PCO) with a "walkthrough" of the subject matter for its written assertion (e.g., forward pricing proposal, incurred cost submission). The walkthrough should generally take place after the auditor performs an initial adequacy review of the contractor's assertion and may occur either before or during the entrance conference. At these

meetings, the contractor should fully explain its assertion and allow the audit team to ask questions to fully understand the contractor's assertion. This process will facilitate the early identification of any inadequacies with the contractor's assertion that need to be addressed. For example, where the request relates to a forward pricing proposal, the contractor should perform a walkthrough of the proposal for the Government after proposal submittal and preliminary review by the Government. This provides an opportunity for all stakeholders to understand the composition of the proposal, identify any obvious data omissions, and may indicate whether the proposal contains inadequacies or if there are other issues that must be addressed before audit and/or negotiations (e.g., the contractor has not finished its price/cost analysis of subcontracts). Having the requestor participate in the walkthrough will help to expedite the appropriate action if the proposal is not adequate or there are other issues that require the requestor's assistance. The auditor should document the walkthrough meeting in the working papers.

4-302.2 Special Considerations for Entrance Conferences on Major Operations Audits **

a. Hold a planning meeting with the contract administration office technical specialist(s) in advance of the joint entrance conference with the contractor, whenever technical assistance is being provided or a joint review/audit is being conducted. The technical specialist(s) should help develop the entrance conference agenda, such as identifying necessary data to be requested from the contractor. Also invite the specialist(s) to participate actively in the conference itself.

b. Notify the contractor's management several weeks before starting an operations audit or other system audit. This notice may be oral or in writing depending on resident working arrangements (4-302.4).

c. As applicable, mention the following matters during the initial contact before the entrance conference, and follow up during the entrance conference on each major system in addition to those matters common to all assignments (4-302.1).

(1) Request the cooperation of the contractor's top management and operating area management to expedite the audit.

(2) Give the contractor's management personnel an opportunity to explain how they have discharged their responsibilities to establish and maintain adequate internal accounting and administrative controls in the area being audited.

(3) Request the contractor to identify all reports and analyses used by any management level to evaluate and control the effectiveness, economy, and efficiency of the audit area.

(4) Request the contractor to provide an informational briefing on the organization and operations involved in the area to reduce the audit time. Such briefings may cover: organizational assignments affecting the area; system descriptions and/or flowcharts of transaction flows and system controls; and any identified problems and planned corrective actions or other planned changes in the area.

(5) Explain in advance the DCAA procedures for submitting draft statements of conditions and recommendations, and establish time frames for the contractor's written responses (see 4-304.5b).

4-302.3 Contractor Notification Letter **

a. [GAGAS 7.09 and 8.20](#) requires auditors to communicate certain information regarding

the audit, in writing to the contractor during the planning phase of the audit (see [2-305](#) and [2-502.12](#)). In order to fully comply with the GAGAS requirements auditors should provide the required information in a notification letter to the contractor using the pro forma letter delivered in CaseWare (WP 11b – Contractor Notification Letter.doc). The letter is also available on the DCAA Intranet. The contractor notification letter will generally be addressed to the management official who signed the proposal or submission or who is responsible for overseeing the subject matter under audit when there is no proposal or submission. Because the letter provides an estimated report issuance date, generally it will need to be issued after completion of the risk assessment. The contractor notification letter does not replace the entrance conference.

b. The notification letter to the contractor on major system audits and other major audit assignments should also confirm the arrangements made and significant matters discussed at the entrance conference. Keep the letter's tone courteous and express appreciation for the arrangements made. However, make it clear that the arrangements should not in any way restrict access to records or personnel necessary to the audit performance. Predeterminations of all records, facilities, contractor personnel, etc. that may be needed before starting an audit are not possible.

4-302.4 Resident Working Arrangements for Entrance Conferences [](#)**

a. Where auditors are assigned full time at the contractor site, it is usually desirable to establish local working arrangements for entrance conferences with the contractor. For example, some contractors may require that the auditor contact certain key personnel before starting specific types of audits (see 4-302.1b.(2)). The contractor may designate a permanent Government liaison representative for audits of a general nature, or the contractor's controller as the contact point for any financial system or compliance type audit and the chief of estimating as the principal contact for price proposal audits. A contractor might also desire a formal entrance conference only on major or nonrecurring audits while price proposal audits or other recurring audits are handled in a prearranged manner.

b. Working arrangements should be established only upon full mutual concurrence of the contractor and the FAO manager. They should not be permitted to restrict access to records or otherwise limit the audit scope. They should expedite the audit and not become so cumbersome as to cause delays or extra work.

c. Do not sign agreements for local working arrangements. If documentation is necessary, a confirming letter may be issued by the contractor, subject to cancellation or revision at any time upon the auditor's request. Make it clear that the auditor will bypass the arrangements anytime that they impede the audit. Additionally, do not enter into written agreements or affix concurrence signatures to contractor letters containing any access to records provisions. Understandings with contractors on reasonable conditions and procedures for the conduct of an audit shall not prejudice DCAA's access rights to perform audits and shall not be formalized in written agreements signed by DCAA representatives.

d. As a minimum, the FAO Manager will hold periodic conferences, usually more than one a year, with the appropriate level of contractor's representatives. Invite contracting officers as appropriate to attend these conferences. At such conferences, discuss any audit matters that need special management attention and advise the contractor of any significant changes in planned audit effort. Document such discussions.

4-303 Contractor Conferences – Interim **

4-303.1 General Procedures for Interim Conferences **

a. Through-out the audit, the auditor should discuss matters with the contractor as necessary to obtain a full understanding of the basis for each item in the contractor's pricing data or other cost representation, or each aspect of the area subject to audit. Disclose to the contractor any factual duplications, omissions, or other mistakes noted in the contractor's assertion, records, or supporting data.

b. The auditor should discuss preliminary audit findings (e.g., potential system deficiencies, potential FAR/CAS noncompliances, etc.) with the contractor to ensure conclusions are based on a complete understanding of all pertinent facts. These types of discussions do not impair auditor independence and are generally necessary to obtain sufficient evidence to support audit conclusions.

(1) Discussions of the preliminary audit issues should be limited to factual matters when the audit is of forecasted costs that will be subject to negotiations. (See 4-304.2b below for a discussion of what constitutes factual matters.)

(2) In some circumstances, depending on the complexity of the issues and the auditor's experience level, it may be appropriate for the auditor to discuss the preliminary audit issues with the supervisor prior to the discussion with the contractor.

c. On occasion, the contractor may revise its submission during the course of the audit. Auditors must never request or suggest that the contractor revise its submission/proposal to correct or adjust for issues identified during an audit. However, in some cases the contractor may, of its own accord, make such revisions after the auditor has discussed preliminary issues with the contractor. In those cases, the audit report should reflect the results of the audit of the original submission and include all questioned cost and/or deficiencies identified during the audit. The requestor/contracting officer should be notified that the audit report will reflect the audit of the original submission, and will consider the contractor's management approved revised submission the contractor's concurrence with DCAA's audit position.

d. In the interest of equitable dealings with the contractor and in the proper discharge of official duties, apprise the contractor of any significant understatements noted in price proposals, reimbursement vouchers, or other cost representations when such understatements are clearly the result of obvious and unintentional oversight, bookkeeping or arithmetic errors, etc. Such cases may include mathematical errors in using improvement curve and other computational analysis techniques.

e. If apparent understatements of estimated costs in price proposals or related submissions do not meet the criteria stated above, do not discuss the auditor's conclusions with the contractor unless the negotiating contracting officer so requests. (See 4-304.2c.)

f. Handle errors on reimbursement vouchers as set forth in 6-1005f.

g. Document interim discussions in the working papers, including date, participants' names and titles, and primary discussion points. If warranted, the discussions should be confirmed in writing to the contractor, and if necessary, a copy should be sent to the ACO.

h. Communicate major audit problems encountered to contractor officials authorized to make a decision. Oral notification should be made at the earliest possible time, with written

confirmation, and if necessary, a copy to the ACO. Do not wait until the final exit conference or the issuance of the audit report. Document any oral discussions with appropriate memorandums or notations in the working papers. Major audit problems include:

- (1) Denial of access to records, including but not limited to:
 - (a) Unavailability of contractor personnel,
 - (b) Failure of contractor personnel to complete audit schedules on a timely basis,
 - (c) Unreasonable delays by management in permitting the commencement of the audit or in providing needed information.

Follow procedures in [DCAA Instruction 7640.17](#), Formal Reporting Procedures for Denial of Access to Contractor's Records, when denial of access is encountered.

- (2) Significant deficiencies/material weaknesses and/or deficiencies that are less severe than significant deficiencies/material weaknesses but important enough to merit the attention of responsible contractor management officials,
- (3) Significant differences concerning the application of generally accepted accounting principles,
- (4) Conclusions regarding the reasonableness of estimates used in developing forward pricing/bidding rates,
- (5) Any other items that may affect audit performance.

4-303.2 Operations Audits – Interim Conferences [](#)**

a. During the audit, keep the contractor's designated representative informed of any problems encountered and interim results of completed phases. If necessary for the efficiency of the audit, a written follow up of the discussions should be sent to the contractor as soon as possible.

b. If contract administration personnel are assisting or participating in the audit, fully coordinate interim findings and recommendations with them before discussing deficiencies with the contractor. Joint reviews require especially close coordination to assure team members' consensus and complete understanding of the findings by the contract administration office. Also coordinate with contract administration technical personnel when the findings involve their area of expertise, but their assistance could not be provided during the audit. Discussions with the technical personnel in such cases can help clarify and/or support the findings when presented to the contractor.

4-304 Contractor Conferences – Exit [](#)**

4-304.1 General Procedures for Exit Conferences [](#)**

a. Upon completion of the field work on each separate assignment, the auditor should hold an exit conference with the contractor's designated representative to discuss the audit results and obtain the contractor's views concerning the findings, conclusions, and recommendations for inclusion in the audit report as required by GAGAS (see [2-403.5](#) and [2-603.7](#)). Except for audits requiring RAM review, the exit conference may be held after the supervisor completes his/her review of the working paper and draft report but before the FAO manager completes the final review if the FAO manager believes it is appropriate based on his/her involvement with the

audit, and/or the complexity of the audit and the experience of the audit team. In such cases, the auditor should inform the contractor that the results are subject to management review and that the contractor will be advised if any significant changes are made. For audits requiring RAM review, all applicable management reviews must be completed prior to holding the exit conference.

b. The auditor should invite the requestor/contracting officer to the exit conference, especially if there are major or complex audit issues. The requestor/contracting officer may choose to invite additional participants who were involved with the audit or are interested in the results (technical personnel, price analyst, etc.).

c. Even when there are no questioned or unsupported costs, noncompliances, system deficiencies, or cost avoidance to be reported, the exit conference is a minimum courtesy to the contractor and is an important part of sound contractor relations. An exit conference may not be appropriate when the audit is performed in support of litigation (4-304.7), or investigations (4-702.5).

d. Confirm or follow up on requests for the contractor's reaction to any audit exceptions for inclusion in the audit report. See separate paragraphs as referenced for guidance on incurred costs (4-304.4), operations audits (4-304.5), and CAS adequacy and compliance audits (4-304.6).

e. For other than audits involving forecasted costs subject to negotiations, such as forward pricing audits, the auditor should provide the contractor a copy of the draft report, or at a minimum, the results of audit section of the draft report (including the opinion and any exhibits and notes, or statement of conditions and recommendations). To facilitate the discussion of the audit results and to obtain the contractor's views of the results, this information may be provided prior to the exit conference as long as the parameters regarding management review discussed in 4-304.1a have been met. If the report includes forecasted costs that are subject to negotiations, such as forward pricing audits, the auditor should not provide the contractor a copy of the draft report or results and should limit the discussion to factual matters/differences (see 4-304.2).

f. The information provided to the contractor at or in anticipation of the exit conference (i.e., draft report/results or, in the case of forecasted costs subject to negotiations, factual information) should be provided concurrently to the requestor/contracting officer. Prior to releasing the draft audit report and other electronic files they should be protected using Microsoft Word (i.e., be password protected to prevent modifications and clearly marked "CUI").

g. Document the exit conference in the working papers, including date, participants' names and titles, and specifically discussed items, and associated contractor's reaction, if any. The documentation should include copies of any draft reports or other information provided.

The auditor may obtain written comments from the contractor representative or oral comments at the exit conference. When only oral comments are provided the auditor should prepare a summary of the oral comments and provide a copy of the summary to the contractor official to verify the comments are accurately stated.

h. The oral and written comments should be included in the audit report as instructed in [10-208.5d\(1\)](#).

4-304.2 Price Proposals **

a. This category includes contractor proposals to establish:

- (1) initial prices under all types of negotiated contracts;
- (2) successive target prices and interim prospective prices under FPR- and FPI-type contracts;
- (3) price changes for contract change orders;
- (4) other contract price adjustments and Contract Disputes Act (CDA) claims including those for alleged delay and disruption and requests for extraordinary contractual relief;
- (5) forward pricing rate agreements; and
- (6) special rates.

Treat the incurred cost portion of final FPR/FPI price redetermination proposals, equitable adjustment proposals and CDA claims as an incurred cost proposal (4-304.4) and the projected portion under this paragraph.

b. Discuss any factual differences found during the audit with the contractor and obtain a reaction for further analysis or inclusion in the audit report. However, pursuant to [FAR 15.404-2\(c\)\(1\)\(i\)](#), do not disclose to the contractor the audit conclusions and recommendations on projected costs or rates that are subject to contracting officer negotiation, except as specifically requested by the negotiating contracting officer. (Discussion of actual cost submissions, even if subject to negotiation, is covered in 4-304.4.) As an example, a labor cost estimate proposed by the contractor may reflect a learning or improvement trend different from the contractor's prior cost experience, with no apparent justification. In this example, you would discuss with the contractor the factual aspects of the prior cost experience and inquire why the experienced trend was not considered appropriate to project future costs. You would not, however, discuss your audit conclusions or disclose the amount of proposed labor costs to be questioned, if any, in the audit report. As another example, the auditor would discuss with the contractor why a proposed raw material factor was based on history from the development phase of a particular contract when the contractor has available more current and relevant history from follow-on production contracts. In this case, the auditor would not disclose the audit conclusion (e.g., that DCAA's results were based on the history for the follow-on productions contracts) or the overall questioned cost, the questioned cost by cost element, or how much of a specific rate/factor was questioned unless specifically directed to do so by the requestor.

c. Discuss with the contractor any discrepancies noted in the certified cost or pricing data, as defined in [FAR 2.101](#), whether they increase or decrease the contract price. As part of these discussions, inform the contractor of any certified cost or pricing data found to be inaccurate, incomplete, or noncurrent. Confine the discussions to factual aspects of the data, and do not attempt to influence the contractor to change the proposal. Any changes in the proposal should be based on the contractor's own initiative by formal written submission to the contracting officer.

d. Advise the contractor of any costs to be reported as unsupported (see [10-210.3](#)).

e. Discuss with the contractor any other CAS and FAR noncompliances found during the audit and, as appropriate, provide details for the contractor's analysis and reaction.

4-304.3 Postaward Audits of Certified Cost or Pricing Data for Possible Defective Pricing **

a. Discuss any factual indication that certified cost or pricing data may have been defective to afford the contractor an opportunity (normally 30 days) to review the matter and provide any additional information for the auditor's consideration. A draft copy of the report exhibit(s) and accompanying footnotes normally should be provided to the contractor. Final determination as to the existence and extent of defective pricing remains the responsibility of the contracting officer.

b. The contracting officer should also be provided the draft report exhibit(s) and accompanying footnotes on apparent defective pricing issues and given the opportunity to provide comments. See [14-119](#) regarding discussions of the audit findings with the contracting officer. The auditor should discuss the findings throughout the course of the audit rather than only at the end.

c. The contractor may contend that there were understated estimates offsetting any potential price reduction that would result from a contracting officer's defective pricing determination. Request the contractor provide appropriate certification and specific data supporting the offsets for audit evaluation and inclusion in the audit report (see [14-115](#)).

d. Although the auditor should not expend resources examining uncertified contractor offsets, the auditor should objectively disclose all of the facts known. Therefore, apparent offsets discovered during the postaward audit should be disclosed to the contractor for its analysis and offset submission if the contractor deems appropriate. (Refer to 14-115 for treatment of offsets in the audit position on recommended price adjustments).

e. Coordination and discussion of the findings by all parties before the audit report is issued can minimize delays in the resolution process. Postaward audit reports should not be issued until the initial findings have been properly coordinated to ensure that findings are based on a complete understanding of all the pertinent facts.

4-304.4 Incurred Cost Proposals **

a. This category includes cost reimbursement vouchers and contractor representations of incurred costs to establish:

- (1) final prices on all types of completed negotiated contracts,
- (2) final indirect cost rates,
- (3) contract termination settlements, and
- (4) equitable adjustment proposals and CDA claims.

Contractor requests for progress payments authorized by the contract will be treated under this paragraph even though projected costs are involved in the calculations. Proposals to establish special rates and interim changes in contract prices are covered in 4-304.2.

b. Discuss all audit conclusions with the contractor's designated official and try to obtain the contractor's concurrence regarding any questions of conformity with generally accepted accounting principles, applicable cost accounting standards, and other cost principles incorporated in the contract(s). If there are audit exceptions to be reported, request the contractor's official reaction for inclusion in the audit report or in the notice of costs suspended

or disapproved.

c. See [6-902c](#) and d for special discussion procedures on costs to be suspended or disapproved under cost-reimbursement-type contracts.

d. As discussed in 6-902e, the auditor should notify the ACO of developing issues which may result in the issuance of a DCAA Form 1 as follows:

(1) Provide the ACO with written documentation of the audit results which were discussed with the contractor at the exit conference, unless the contractor immediately agreed to all audit exceptions and the written report will be issued within the next 30 days. The written documentation may be in the form of a memorandum to the ACO, a copy of a memorandum for the file setting forth the results of the exit conference, copies of a draft report exhibit and/or notes, or copies of working paper exhibits and/or supporting working papers. In other words, provide the ACO with whatever information or subset thereof that was provided to the contractor at the exit conference.

(2) Provide the ACO a copy of the contractor's written rebuttal to the audit findings immediately upon receipt.

(3) Discuss significant unresolved issues with the ACO at any mutually agreeable time.

4-304.5 Operations Audits – Exit Conferences [](#)**

a. This paragraph covers evaluations of contractor's operations for economy and efficiency. After full discussion of each matter requiring contractor action, provide the contractor a draft statement of the condition(s) and recommendations. Carefully design the discussions and drafts to elicit contractor concurrence with recommended system improvements and/or cost avoidance. Request an official written response for inclusion in the audit report, and establish a time frame for the contractor's response. Allow ample time for the contractor to consider the audit presentations, and consider alternatives the contractor may suggest that will satisfy the audit objectives.

b. If the contractor does not agree with the audit recommendations and provides a response, the auditor should provide in the report comments to specifically address the contractor's response. If specialist or technical assistance is required in evaluating the contractor's response, the auditor should obtain the assistance. Do not merely restate or amplify a position already stated all additional information that was submitted by the contractor in its response should be considered.

c. If the evaluation results in cost avoidance recommendations, make the contractor aware that, effective immediately, any impact of such recommendations will be reflected as questioned costs in reports on price proposal evaluations when applicable (in accordance with the criteria in 9-308).

4-304.6 Cost Accounting Standards Audits [](#)**

a. This paragraph covers CAS compliance audits, CAS disclosure statement audits, audit reports on CAS noncompliance, and cost impact proposal audits.

b. Thoroughly discuss apparent CAS noncompliances with the contractor to establish that the audit findings are based on a proper understanding of the issues and that all pertinent facts

have been considered. Do not state that the auditor is making a determination of noncompliance, since the contracting officer makes this determination. Provide the contractor a draft copy of the audit report for its comments. The letter transmitting the draft audit report should solicit the contractor's specific comments on the compliance issues and advise that the comments will be included in the audit report if received by a specified date.

c. Discuss the results of cost impact proposal audits with the contractor to establish that the audit findings are based on a proper understanding of the issues and that all pertinent facts have been considered. Provide the contractor a draft copy of the audit report for its comments. The letter transmitting the draft audit report should solicit the contractor's specific comments on the audit exceptions and advise that the comments will be included in the audit report if received by a specified date.

4-304.7 Litigation Support **

a. Audit work is privileged when performed at the request of Government litigation counsel in support of ongoing or anticipated litigation (see [15-503](#)). If there is reason to believe that the audit has been requested in support of litigation, ask the requestor if the audit will be covered by the attorney work product privilege. If so, an exit conference could compromise the privilege. When audit work is covered by the attorney work product privilege, explain the importance of the exit conference in resolving audit issues and avoiding errors, and attempt to obtain permission to hold an exit conference. However, to prevent inadvertent compromise of the attorney work product privilege, do not hold an exit conference without litigation counsel's written consent and coordination.

b. Litigation support is not investigation support (see 4-702.6). In litigation support, audit access arises from contractual requirements.

4-400 Section 4 - Audit Working Papers **

4-401 Introduction **

This section contains guidance for the preparation, format, contents, and filing of audit working papers, whether prepared manually or using computers. The preparation of working papers assists the auditor in accomplishing the objectives of an audit assignment and serve as the principle support for the conclusions in the audit report. They also provide a record of the work performed; record of communications with the contractor and/or Government personnel; evidence of adequate supervision; are used as supporting data during negotiations, appeals, and litigations; and provide a basis for any other quality assurance reviews.

4-402 General **

a. Extensive copying of contractor records for inclusion in working papers is unnecessary. It is generally sufficient to reference the records and source documents examined during the course of the audit. However, where audit exceptions are found and reported, the working papers should include copies of the evidential material examined, including contractor source documents.

b. Auditors should prepare and maintain audit working papers on a current basis. Working papers should reflect the progress of the audit, ensure continuity of audit effort, and permit reassignment of auditors without significant loss of time.

c. The audit report is not a working paper. It summarizes and reports the Agency's final

conclusion on the Subject of Audit, based on the data and analysis documented in the working papers. The working papers must support the final conclusion(s) reached. Auditors should follow 4-403f, which discusses superseded working papers, for guidance on the treatment of working papers that do not support the final report conclusion(s). Only the final report and the final cross-referenced draft should be retained in the original file.

d. The nature of working papers requires that proper control and adequate safeguards be maintained at all times. Working papers frequently reflect information considered confidential by the contractor and should be marked "CUI" if released outside of DCAA. Working papers containing classified information for Government security purposes must be marked at the highest classification level of the source data (e.g., top secret, secret, confidential).

e. E-mail is used to routinely communicate audit related information within DCAA. When sending e-mail within DCAA, the use of compression software is recommended for anything in excess of 500KB in size. In addition, auditors should ensure recipients have enough information in the subject and body of the e-mail to efficiently identify the subject matter (typically, without opening the attachments). Items that should be considered for inclusion (as appropriate) are as follows:

- (1) audit assignment number (if not already in an attached filename),
- (2) if inter-FAO correspondence, consider using the assignment number established by the requesting FAO, which is more meaningful to them,
- (3) contractor name,
- (4) assignment subject.

See [10-203.9](#) for guidelines on preparation of e-mails to customers, including use of compression software.

4-403 Format and Contents of Working Papers [](#)**

a. Standardization in design, content, and arrangement of working papers is desirable because it facilitates the audit, the supervisory auditor's review, and report preparation. This section provides guidance on the Agency's standard working paper format.

b. Conditions and circumstances vary with each audit. The nature, timing and extent of audit documentation require the exercise of professional judgment. A constant awareness of the purpose and use to be made of working papers is helpful in determining their content. See guidance in 4-410 on revisions to audit working papers after the audit report is issued.

c. Working papers can consist of electronic files, such as spreadsheets, word-processing files, graphical images, etc., as well as hardcopy documents when electronic files are not practical. Auditors should strive to use electronic working papers, to the extent possible, to capture the efficiencies provided by information technology, such as storage, search functions, accuracy, and processing speed.

d. Two types of working papers are generated during the audit -- administrative working papers and audit working papers.

e. Administrative working papers do not document field work or audit procedures. The administrative working papers generally contain information and documentation that is used internally by the Agency. Figure 4-4-2 contains an outline of the Agency standard administrative

working papers. Each audit working paper package will include an index of the Administrative Working Papers. Administrative working papers typically include:

(1) notes or correspondence documenting interaction with Government or contractor representatives;

(2) an audit report or memorandum to document the completion of the assignment;

(3) EPIC data entries (including computations of dollars audited and cost savings); and

(4) audit lead sheets. An audit lead sheet should be prepared when an issue arises that an auditor feels needs to be addressed, but is not an area within the scope of the current audit. Auditors should provide a brief description of audit leads, identify areas potentially impacted, and suggest audit steps, if appropriate. Supervisors will review draft lead sheets and provide directions for appropriate follow-up. The timing for follow-up on the audit lead will be based on risk. Appropriate follow-up may include documenting specific consideration in appropriate future assignment(s), immediately establishing a new assignment to review the lead, or providing additional guidance to review the lead in the current assignment. Final approved audit lead sheets are to be maintained in the originating assignment working papers, as well as the FAO contractor permanent file. Supervisors are responsible for ensuring audit leads are addressed, documented, and dispositioned appropriately. Field office managers are responsible for reviewing audit lead sheets periodically to verify appropriate actions have been taken.

f. Audit working papers are generated during the field work portion of the audit to document the significant conclusions and judgments of the auditor. They should contain descriptions of the transactions and records examined, and the objectives, scope, and methodology (audit procedures) used to develop the conclusions. The audit working paper file consists of current working papers and, if applicable, superseded working papers. A description and discussion of current, and superseded working papers and working papers for cancelled assignments follows.

(1) Current working papers. Current working papers should be relevant to the audit assignment and support the report conclusions. In preparing current file working papers, the auditor should not unnecessarily duplicate information contained elsewhere in the same audit assignment or located in the permanent file. Frequently, the most expeditious method is to reference the current file to the permanent file data (see 4-405 for information pertaining to permanent files). GAGAS requires that documentation in the working papers be appropriately detailed and organized to provide a clear link to the findings, conclusions, and recommendations contained in the report. When a revision in audit scope occurs, the working papers should document the reasons for the change in the engagement objectives. The revisions to the audit program, and conclusions based on the revised scope, are classified as current working papers because they are relevant to the reported audit conclusion. An increase or decrease in audit scope should be adequately documented as part of the “revised scope” working papers. If the revision in the audit scope is significantly different from the working paper B risk assessment, the auditor should also make a notation in this section as well. The documentation, in all cases, should briefly describe the original audit scope and the reason for the revision in scope.

The supervisory auditor must demonstrate and certify that the engagement’s working papers have been reviewed and are compliant with GAGAS. The supervisory statement on sufficiency of evidence, working paper 01b automatically generated in CaseWare, demonstrates this requirement.

(2) Superseded working papers. Superseded working papers should be clearly identified as such and include any working papers prepared during the course of the audit that do not support or are not relevant to the conclusions in the audit report. This will include, for example, working papers changed due to revisions in audit methodology that are not relevant to the audit conclusions.

(3) Working papers for cancelled assignments. Working papers for all cancelled assignments should be retained and archived in CaseWare using the lock-down process regardless of the number of hours charged. For assignments cancelled with 8 or more hours, auditors should prepare a MFR to fully document the audit work performed and why the assignment was cancelled. If the contractor and contracting officer were notified of the assignment through a notification/acknowledgment letter or informal communication (e.g., verbally or e-mail), the auditor should inform them that the audit has been terminated/cancelled and document that communication. Auditors and supervisors should generally use judgment in deciding whether to prepare a MFR for cancelled assignments with less than 8 hours. However, documentation requirements for unreconciled difference of opinion must always be followed even when the assignment is cancelled (4-409(d)).

g. The following is a description of the major audit working paper sections:

(1) WP Section A -- Summary working paper section contains:

- The customer's special requests and requirements (if any);
- The audit criteria (e.g., FAR, DFARS, CAS);
- Initial supervisory guidance and audit objectives;
- Concluding audit steps; and
- Interim/final supervisory guidance and review

(2) WP Section B -- Risk assessment and preliminary review working paper section contains:

- Documentation on the evaluation of materiality and sensitivity factors, and the impact of this evaluation on the audit;
- Documentation on the evaluation of inherent and other risk factors (e.g., prior audit findings, prior Government contract experience, financial condition, accounting changes, CAS compliance, etc.), and the impact of this evaluation on the audit;
- Documentation on the understanding of internal controls risk and the impact of this understanding on the audit;
- Documentation on any identified fraud risk indicators and responses/actions related to those identified risks;
- Documentation of other preliminary risk assessment procedures (e.g. reconciliations; review of Board of Director's minutes; internal audits; contractor use of service organizations; need for technical assistance and/or assist audits) and how they affect the cost elements being audited; and
- Documentation of the results of risk assessment & Scope of Audit and the impact.

the risk assessment has on the substantive testing required to accomplish the specific audit objectives (See Figure 4-4-3 for audit objectives by assignment activity code).

(3) Lead working papers and related audit program (e.g., WP C-01) contain:

- The lead schedule for each cost element/area being evaluated (e.g., schedule of proposed and questioned amounts, schedule of control objectives audited and the results);
- The tailored audit steps for the evaluation of that cost element/area; and
- If findings will be reported, the structured audit report note (see [10-211.2](#)), for inclusion in the audit report, which describes the work performed for the cost element/area being audited. The structured note format does not need to be used if the cost element/audit area will be excluded from the audit report.

The structured note will address the following topics:

- (a) Summary of Conclusions
- (b) Basis of Contractor's Costs
- (c) Audit Evaluation
- (d) Contractor's Reaction
- (e) Auditor's Response

Another form of the structured note is the Statement of Condition and Recommendation. This format is used for internal control examinations, operations audits (refer to [10-211.2](#)) and CAS audits (refer to the appropriate Results of Audit section in [10-800](#)). If there are no findings, for these activities provide a narrative summary of the audit area, the audit work performed and a conclusion indicating no exception was taken.

(4) Detailed working papers contain:

- The supporting data, information, schedules, and computations for the audit steps on the applicable lead working paper.
- The on-page notes that document accomplishing the tailored audit steps, support the significant audit judgments and conclusions, and describe the transactions and records examined. These notes will address the following:
 - (a) Purpose – state the specific purpose of the working paper on each working paper or the first page of a group of related working papers. Avoid using general phrases such as “Review Labor” or “Review Material”.
 - (b) Include enough information to make it evident why we created the working paper and the reason why we are performing the audit step. The wording of the purpose should align with the audit program steps that the working paper will satisfy.
 - (c) Source of Information – identify the source of data or information shown on each working paper. The statement should include the name, title, and department of the individual who provided the information. If beneficial, also provide the receipt date. If the information comes from a contractor-generated report, provide the name and date of the report. Also, if the data was obtained from the contractor’s systems, indicate how the information was

obtained to facilitate another auditor obtaining the same type of information at a later date. If the information came from the FAO permanent file, the auditor should provide specific information regarding the source of the information, not merely referencing “permanent file”. Generalized statements, such as “contractor’s accounting records,” or “Jane Doe” are not sufficient.

(d) Scope of Analysis – provide a detailed description of the scope of the audit work performed to create the working paper. Include appropriate explanations when the scope has been limited or unusually expanded, including sampling plan or judgmental selection details when appropriate (see note below regarding transaction testing documentation requirements). It should also include the specific criteria (e.g., [FAR 31.205-33](#), [CAS 48 CFR 9904.412](#)) used to make the judgments and conclusions. Avoid using generic phrases, such as “reviewed the rates”.

(e) Auditor’s Conclusions and Recommendations – at the time of determination, document the conclusions and recommendations on the working paper. For a group of related working papers, a single conclusion on the first page of the group is acceptable. The conclusion should not duplicate, but should relate to, the information included in the purpose (e.g., if the purpose of the working paper is to determine the acceptability of costs, the conclusion should state whether the costs were acceptable).

- If the working paper is an Excel spreadsheet and contains multiple tabs, it is not necessary to include the purpose, source, scope and auditor conclusion and recommendation (P,S,S,C) on each tab of the worksheet provided the work on the tab is understandable and supported by the P,S,S,C included on the lead tab for the working paper.
- Document the following in the working papers when selecting items for transaction testing, regardless of the method of selecting the items. (Refer to the Variable and Attribute Sampling Guidebooks for additional information regarding statistical sampling documentation.)

(1) A description of the universe from which the items are selected, including specific source information (e.g., contractor’s January 1, 20XX bill of material totaling \$2.5 million).

(2) Identification of the items to be tested (e.g., material parts with an extended value over \$50 thousand) and the attributes to be tested.

(3) When judgmental selection techniques are used, include an explanation describing how the selection results in adequate audit coverage of the universe to meet the audit objectives (e.g., We judgmentally selected 35 items/transactions of the 345 in the universe which represent 60% of the dollars. The remaining 310 items/transactions or 40% of the dollars are composed of small dollar items and similar transactions. Therefore, in our opinion, because of the similar transaction types and the results of our review of the 35 items/transactions, which disclosed no material misstatement, we believe we have sufficiently addressed the risk in our review and can opine on the universe.).

h. Auditors are to prepare working papers in electronic format to the maximum extent possible. CaseWare incorporates working paper templates and audit report shells that must be used for audit activity codes.

i. Naming Conventions:

(1) To simplify the indexing process in an electronic environment, DCAA has adopted a standardized file naming convention. This convention also establishes standardized procedures

for storing in-process electronic working papers, as follows (see 4-407d for naming conventions related to closing actions):

- For each assigned audit, the CaseWare software will establish a new folder on the CaseWare Smart Sync server. This new folder is assignment specific and will be given the actual assignment number generated from EPIC, such as: 20251010000000. All in-process electronic working papers will be stored within the appropriate electronic assignment folder. DCAA electronic working paper software supports this naming and storing convention.

(2) Detailed and administrative file names should begin with the actual working paper reference, such as B-02a, T-04, etc. This will be followed with a brief description or actual title of the working paper, such as Evaluation of Engineering Labor Rates or Determination of Current Labor Rates. The combined result will make the identification of electronic working papers much clearer. An example of the file naming convention is shown below:

WP	Description
08c-1	Contractor's Explanation of Depreciation (email)
11	Audit Acknowledgement Memo – Assignment No. xxx
D-02	Direct and Indirect Labor-Information Reliability.doc
D-03	Detailed Evaluation of Labor Rates.doc
D-03a	Determination of Current Labor Rates.xls
D-03a-1	Actual Engineering Rates to Date.doc

To make it easier to find documents, auditors should make use of longer, more descriptive file names.

j. Working papers should contain the following information:

(1) Heading. Head each hard copy working paper with the name of the contractor, the assignment number, and a title or description. The title or description should convey the purpose of the working papers. Headings are optional for electronic working papers, however, most working papers generated using the Agency electronic working paper application (CaseWare) will automatically generate the appropriate headings based on EPIC assignment information.

(2) Auditor's and Supervisor's Sign-Off. The requirement for the auditor's and supervisor's sign-off (initials and dating) applies to both hardcopy documents and electronic working papers. The work of all auditors contributing to the working paper content, including that of technical specialists, should be identified to the individual work product. CaseWare provides functionality for "prepared by" for auditors on working papers. For hard copy working papers, the auditor who prepares or completes a working paper should place his or her initials and the month, day, and year the work was performed or completed on each hard copy sheet. For hard copy working papers, to provide a standard location for reviewers, the auditor normally identifies his/her work by initialing and inserting the date in the lower right corner of the audit working papers.

An acceptable example:	
	<i>W.H.R.</i> 12/16/03

Supervisory guidance, review, and approval must be evident in the working papers. For electronic working papers, CaseWare provides the functionality to sign-off as “Reviewed by” for the supervisor. Sign-off by the supervisor is evidence that the working papers have been reviewed to the extent necessary for the supervisor to ensure the audit objectives have been accomplished and there is adequate evidential matter to support the audit findings (also see [2-S103.4b\(4\)](#)).

(3) References. The working paper reference scheme should follow a "top-down" approach. Avoid referring from lower level working papers (i.e., detailed working papers) to higher level working papers (i.e., lead and summary working papers). As a minimum, reference the following:

- All significant judgments, findings, conclusions, and recommendations that are included in the draft report. This includes: summary results and notes to the summary and lead working papers; the report scope section on how the contractor’s internal control systems affected the scope of audit; all report qualifications; and if applicable, the Other Matters section of the report.
- Information in the summary working papers to the related lead working papers.
- Risk assessment/preliminary review working papers to the related detailed working papers.
- The lead working papers to the detailed working papers.
- The detailed working papers to the next lower level of supporting working papers.

Audit working papers may follow the top-down approach using any one of the following examples:

- See WP K-02a
- Source WP K-02a
- WP K-02a

All are acceptable, provided they clearly direct the auditor to the appropriate source working paper. It may be preferable to provide a more detailed reference, such as: "See WP L-1, line 45, column B". The level of reference detail is subject to individual auditor judgment and to any supervisory or FAO specific preferences.

Electronic working papers can complicate the referencing process. CaseWare allows for electronic references to source data. Specifically, such functions as CaseWare Add-ins Document Connector, hyperlinks, copy and paste, linked objects, embedded objects, etc., increase the auditor's ability to manipulate data within and between working papers. Auditors are encouraged to make use of this technology; however, it is essential to maintain the requirement to specifically annotate the appropriate working paper reference.

k. Stated References. Electronic working papers and the draft audit reports that are electronically referenced must also include a stated reference. A stated reference is an actual

working paper reference, such as A-01, B-02a, T-04, etc. Maintaining a stated reference within the electronic working paper is a sound business practice. It may be needed if the working paper is printed at a later date. Hyperlinks are excellent navigational aids, but the electronic links can be severed, making the stated reference the only navigational aid to the supporting documentation. When manually entered working paper references should be distinguished using the Bold font. Color fonts may also be used to further distinguish working paper references; however, care should be taken in selecting colors that are easy to read when printed. CaseWare includes a tool on the Add-ins tab (Document button) to aid auditors when developing hyperlinks that take advantage of using stated references. This tool will also apply the desired attributes (bold and color).

l. Indexing.

(1) Index each working paper as it is prepared. The Agency standard indexing protocol is described in Figure 4-4-1. In practice, auditor working paper packages can consist entirely of electronic files or include a mix of electronic files and hardcopy working papers. Each audit working paper package, whether in electronic or hardcopy form, will follow the standard indexing structure.

(2) Every audit working paper package should include an index of the Administrative and Audit Working Papers. The required index is provided by CaseWare as working paper 00 Working Paper Index. It automatically generates a listing of all electronic documents in the assignment folder within the CaseWare assignment folder, organized in accordance with the Agency standard indexing protocol as described in Figure 4-4-1. It also provides entries for the standard administrative working papers as described in Figure 4-4-2. If there is an electronic version for a particular administrative working paper entry, the index removes the entry and lists the electronic file. Hard copy working papers should be referenced by adding a placeholder working paper into the CaseWare assignment folder at the location and using the working paper number of the hard copy. If the assigned file name does not adequately describe the electronic file, additional narrative should be provided in the description column. Entries for any unused administrative working papers with no electronic file should be removed at the conclusion of the audit using the index's function for that purpose so that it is clear that those working papers are not a part of the working paper package.

m. When the audit report has been electronically transmitted to the customer, the exact same file transmitted must be included in the working paper package (see 4-407d(2)). An electronic copy of the draft audit report, cross-referenced to the working papers, and an electronic version of the acknowledgment letter must be retained in the audit working paper package.

Figure 4-4-1 Standard Working Paper Format and Indexing **

Summary Working Paper, which includes:	A-00
Audit Summary	
Executive Summary	
Results of Audit	
The following working papers are also required:	
Planning Document, which includes:	A-01
Subject of Audit	
Initial Supervisory Guidance/Audit Objectives	
Concluding Audit Steps	
Risk Assessment/Preliminary Review Working Paper	B-00
Summary of Risk Assessment	
The following working papers are also required:	
Audit Planning Considerations/Preliminary Audit Steps	B-01
Assessment of Relevant Internal Controls	B-02
Assessment of Need for Specialist Assistance-Assist Audit	B-03
Lead Working Papers	C-00, D-00, etc.
Tailored Audit Steps for the Cost Element/Area Being Audited	C-01, D-01, etc.
Information Reliability	C-02, D-02, etc.
Detailed Working Papers	C-03, D-03, etc.
Supporting Working Papers	C-03a, D-03a, etc.

Note: Electronic indexing of page numbers should be done using currently available means within the software application in which the work is performed. Hard copy indexing of page numbers should be done using the format: A (1/3), A (2/3), A (3/3).

Figure 4-4-2 Administrative Working Papers ******

Following are the contents of the Agency administrative working papers section and their sequence:

	REPORTS, LEADS, EPIC DATA
01	Audit Report/Memorandum
01a	Cumulative Allowable Cost Worksheet (CACWS)
02	Computation of Dollars Audited & Cost Savings
03	Defective Pricing Lead Sheets
04	
05	Audit Leads
	CORRESPONDENCE

23	Revised Contract Submission / Data
	OTHER HEADQUARTERS GUIDANCE OR WORKSHEETS
30	Other Audit Guidance (or worksheets)
31	Activity Code Specific Policy Guidance (or worksheets)
32	Independent Reference Review
34	Audit Specific Independence Determination
35	Legal Guidance

Figure 4-4-3 Audit Objectives by Assignment Activity Code [](#)**

The table below includes a description of the primary audit objectives, by audit assignment type and activity code. The table also includes the type of structured note to use in the audit report to communicate to the cognizant contracting official.

Audit Assignment Type and Activity Code	Audit Assignment Objectives	Type of Structured Note
Incurred Cost 10100, 10160, and 11015	Assist the cognizant Administrative Contracting Officer's (ACO's) negotiation by examining the contractor's indirect rate proposal to determine if costs charged to auditable Government contracts are allowable, allocable, and reasonable in accordance with contract terms, applicable generally accepted accounting principles, cost accounting standards and Government acquisition regulations.	Explanatory Note
Real Time Testing 10310, 10320, 13500	The auditor's primary objective is to perform real time audit procedures related to either purchased materials/services existence or consumption at major and non-major contractor locations or to perform labor floorchecks/interviews and to evaluate the accuracy of contractor employee (salaried and/or hourly) labor hour charges to contracts, indirect accounts, or other cost objectives, The work performed from these procedures will be included in the applicable contractor FY incurred cost audit.	Explanatory Note
Forward Pricing 21000, 23000 and 27010	Evaluate the contractor's forward pricing proposal for the cognizant Procuring Contracting Officer (PCO), to assist in determining: <ul style="list-style-type: none"> • a fair and reasonable price; • rates and factors for the award; • administration, modification, or repricing of Government contracts; and • if contractor price proposals comply in all material respects with FAR Part 15 and 31, as well as applicable CAS provisions and solicitation terms. 	Explanatory Note
Post Award Defecting Pricing TINA Compliance 42000	Evaluate the negotiated contract price for the cognizant PCO to establish if the negotiated contract price was increased by a significant amount because the contractor did not submit or disclose accurate, complete, and current certified cost or pricing data to the Government.	Explanatory Note
Pre-Award Accounting System 17740	Obtain an understanding of the accounting system to appropriately complete the Pre-award Survey of Prospective Contractor Accounting System, SF 1408, and notify the cognizant ACO as to whether the design of the contractor's accounting system is acceptable for the award of a prospective Government contract.	Statement of Condition and Recommendation (SOCAR)
Business Systems 17741, 11070, 12500, 24010	Support the cognizant Administrative Contracting Officer's adequacy determination, by examining the contractor business system compliance with the applicable DFARS business system requirements (i.e., DFARS 252.215-7002- Cost Estimating Systems Requirements, DFARS 252.242-7004-Material and Management and Accounting System, and DFARS 252.242-7006- Accounting System Administration).	SOCAR
Business System Deficiency 11090	Report Business System Deficiencies identified during other than business system audits (i.e., incurred cost, price proposal, etc.) to the cognizant ACO, to assist in the ACO's determination of business system compliance with the DFAR criteria. Auditors will establish whether the	SOCAR

	noncompliance identified in the originating audit represents a material weakness or system deficiency.	
Terminations 17100	<p>Examine the contractor's termination proposal to assist the Termination Contracting Officer's (TCO's) negotiation, by determining if the contractor's termination proposal contains the following:</p> <ul style="list-style-type: none"> allowable costs; settlement expenses; applicable profit and/or loss; and <p>proposed costs that are compliant with applicable Government acquisition regulations and contract terms.</p>	Explanatory Note
Claim, Delay, Disruption Proposed Amounts 17200	Evaluate the quantum (amount of the monetary adjustment) aspect of an equitable adjustment due to an asserted Government caused delay/disruption and to determine if the costs were incurred, related to the alleged changed condition and are an acceptable basis for negotiation or settlement for the PCO/Government Legal Counsel. The evaluation should focus on determining the reasonableness, allocability, and allowability of amounts submitted by the contractor related to proposed or claimed increased/decreased costs due to the events giving rise to the adjustment applicable Government acquisition regulations and contract terms will be used as the criteria to audit the claimed costs due to the alleged Government caused delay/disruption.	Explanatory Note
Claim, Other Proposed Amounts 17200	Evaluate the quantum (amount of the monetary adjustment) aspect of an equitable adjustment proposal or claim submitted under the disputes clause (FAR 52.233-1), the changes clause (FAR 52.243), or other basis and provide the PCO a report regarding the acceptability of proposed or claimed costs and the reliability of contractor data furnished in support of the proposal or claim. The evaluation should focus on determining the reasonableness, allocability, and allowability of amounts submitted by the contractor related to proposed or claimed increased/decreased costs due to the events giving rise to the adjustment.	Explanatory Note
Progress Payments - Cost Claimed Amounts and Progress Payments - Percentage of Completion Claimed Amounts 17500	Evaluate contractor progress payments to assist the cognizant ACO in validating progress payments submitted by the contractor are in conformance with FAR 52.232-16, so that timely payments are made to contractor's with interim financing for a percentage (stated in contract) of allowable costs incurred for undelivered and uninvoiced items.	Explanatory Note
Defense Security Cooperation Agency (DSCA) Compliance 17900	The auditor's primary objective is to determine if the contractor complies with specific elements contained in its signed DSCA Certification and Agreement and report on the contractor's compliance. If the contractor is found to be in noncompliance with any of the certification elements, the auditor is to describe the situation and include the amount of any corresponding/related costs in the report for DSCA's disposition.	SOCAR
Compliance of Initial Disclosure Statement or Revisions to the Initial Disclosure Statement with Cost Accounting Standards (CAS) 19100	Evaluate the contractor's initial disclosure statement or revisions to the initial disclosure statement are compliant with applicable (CAS) and to confirm that the contractor's disclosure statement adequately describes the contractor's practices for estimating, accumulating and reporting contract costs and if its disclosed practices will: (1) achieve consistency in the cost accounting practices used in estimating costs for its proposals with those practices used in accumulating and reporting costs during contract performance, and (2) provide a basis for comparing such costs. The results	SOCAR

	are reported to the cognizant, ACO to assist in his/her determination of CAS compliance.	
Cost Accounting Standards (CAS) Compliance 194XX	Evaluate the contractor's disclosed policies, procedures, and practices used to estimate, accumulate, and report costs on Government contracts are compliant with the applicable CAS criteria (e.g., CAS 403, 418, etc.), being examined. CAS compliance audits are conducted as standalone CAS compliance audits or during examination of other audits such as incurred cost, system reviews, etc. The results are reported to the cognizant, ACO to assist in his/her determination of CAS compliance.	SOCAR
Non-Compliance with Cost Accounting Standards (CAS) 19200	Report CAS non-compliance(s) identified during an incurred cost, price proposal, or any other type of audit that is not a specific CAS examination (i.e., not 19100 or 194XX assignments) to the cognizant ACO to support the determination of CAS compliance.	SOCAR
Cost Impact Proposed 19500	Evaluate the contractor's cost impact proposed amounts due to its failure to comply with CAS or to follow consistently their disclosed cost accounting practices in estimating, accumulating and reporting costs on contracts and subcontracts containing the CAS clause; to determine if the proposed amounts comply with contract terms for administering Cost Accounting Standards under FAR 52.230-6. The audit results will assist the ACO in negotiating price adjustments if required.	Explanatory Note

4-404 Working Papers - Agenda Sheet **

During the assignment, matters may arise that are not settled immediately either because the information is not available or the auditor wishes to avoid interrupting the work at hand. The auditor should develop a separate agenda sheet or "To Do" sheet listing matters for further examination as the audit proceeds. In CaseWare, Issues are electronic review notes used to identify and resolve concerns in the audit package. Reminders in Issues is an automatically generated location to develop the "To Do" list. Before completion of the audit, each item in Reminders/Issues should be resolved. Items which may be placed on the agenda sheet include:

- (1) Differences to be investigated.
- (2) Items to be discussed with contractor personnel.
- (3) Additional audit steps to be performed after preparation of an analysis or schedule.
- (4) Unavailable contractor records to be examined later.
- (5) Follow-up on partially completed transactions.
- (6) Items requiring discussion with or approval of the contracting officer or technical or supervisory personnel.

4-405 Permanent File **

a. The permanent file on each contractor is a central repository of information gathered during audits that has continuing value and use to subsequent audits expected to be performed at the same contractor. Permanent files are useful in preparing the audit program and in determining the appropriate scope of subsequent audits. They also provide ready means for auditors to become familiar with the contractor's operations and any existing audit problems or contractor system weaknesses. While summary information on the contractor's organization, financial structure, and policies and procedures may sometimes be included in permanent files

for smaller contractors, such information on large contractors with continuing audit activity is generally maintained in the field audit office at a central reference library.

b. Auditors are required to maintain and update permanent files for new or changed contractor organizations, operations, policies, procedures, internal controls, software programs, and accounting methods that influence the nature, level, and accounting treatment of costs being charged or to be charged to Government contracts. This also includes the update to documentation on the contractor's contract briefing system or auditor-prepared contract briefs. This requirement ensures that any of the above type information gleaned from current audit work is summarized or referenced where it is likely to have a continuing value to subsequent audit work. It is not necessary to establish separate audit assignments to gather organizational or procedural manual changes, and to file such information in the permanent files when it has no immediate or obvious influence on future audit assignments. In distinguishing between what is needed and all other information, the auditor must exercise judgment.

c. Auditors often refer to prior current audit working paper files as the permanent files. This is especially true with indirect cost audit files that contain audited contract cost information. Accordingly, when prior audit files contain information that would likely be useful in the performance of future audits, and it is not practical to transfer the data to a separate permanent file, the auditor should maintain and properly reference the prior audit file as part of the permanent file. Steps should be included in each current audit to identify the types of information that should be placed in the permanent file (see 4-405f). Auditors using the permanent file during a current audit are also expected to identify permanent file information that is outdated or no longer considered useful for future assignments. The auditor should submit recommendations to the supervisory auditor for removal of such data from the permanent file. The supervisory auditor should consider if the data is necessary for supporting GAGAS audits that are being relied upon prior to authorizing removal.

d. The permanent files should be maintained in a convenient, accessible manner. The Electronic Contractor Permanent File (ECPF) system is the Agency's standard tool for maintaining contractor permanent file records. During field visits to contractor locations, auditors are encouraged to obtain information electronically, if possible, to facilitate storage and maintenance of records in the ECPF system.

e. The structure of the ECPF uses a folder with the contractor name and UEI, and includes 13 primary folders subordinated to it. The primary folders are lettered A through M, as follows:

A-General Contractor Information

B-Audit Planning

C-Financial Capability

D-Financial Information

E-EVMS

F-Contract Information

G-Correspondence

H-ICAPS/ICQ

I-CAS

J-Forward Pricing

K-Incurred Cost-Indirect rates

L-Operations Audits

M-Miscellaneous

The primary folders also contain numerous subfolders, and there are versions available for both major and non-major contractors. The FAO can file at any level within the system of folders. Depending on the size and complexity of the contractor, the FAO can file in as simple or complex a fashion as required. Instructions and tools related to the creation, implementation, and use of the ECPF are located on the DCAA website under Comp Support/File Libraries.

f. The following items would logically be included in the permanent file as having continuing value in future audit assignments:

(1) Disclosure statement and revisions in accordance with CAS rules and regulations.

(2) CAS planning and cycling documentation.

(3) CAS compliance and noncompliance tracking.

(4) CAS Tracking of Issued Noncompliance (19200) Report (After FY 1991).

(5) Audit lead sheets.

(6) Internal control system planning and cycling documentation.

(7) Historical pension cost information. At a minimum include the following information for each defined benefit plan by fiscal year:

(a) For contractors not separately calculating pension costs by segment – total costs incurred, the contractor's established allocation base to allocate pension costs to segments, and the Government's participation in the allocation base, even if no pension costs were incurred for the year.

(b) For contractors calculating pension costs by segment – for each segment: total costs incurred, the portion of the costs allocated to contracts subject to CAS and FAR Cost Principles, and the year-end pension asset balance (market value), even if no pension costs were incurred for the year.

(8) Cumulative Allowable Cost Worksheet (CACWS).

4-406 Copies of Contractor Data in Working Papers **

a. When considering the extent of the contractor's data that should be copied and retained in the working paper files, the auditor should use the following guidelines:

(1) The audit file should contain copies of the contractor's records as part of the audit documentation if they are needed to enable an experienced auditor to understand the work performed, the evidence obtained and its source, and conclusions reached. The auditor should consider the continuing availability of source documents and contract data retention requirements when deciding whether to reference or reproduce contractor source documents.

(2) Where a particularly sensitive or material audit conclusion hinges on key source documents and referencing would not provide sufficient evidence of the content, copies should

be included in the working papers. This same consideration applies when the audit results can give rise to a Government claim against the contractor, such as an assertion of defective pricing or an allegation of CAS noncompliance. In these situations, the contractor data should be retained in the working paper files for consideration by the contracting officer in his/her decision-making processes. More routine audit conclusions may be sufficiently documented by reference and extraction of pertinent information.

(3) The auditor should recognize contractor concerns about reproducing copies of sensitive financial or other operating information. Instead of making copies, the auditor should take notes or extracts if this will satisfy the Government Auditing Standards (see above) and the needs of the contracting officer can be accomplished with a reasonable expenditure of audit effort.

b. The contractor must provide reasonable access to all records and corroborative documentary evidence necessary to achieve the audit objective. Auditors who are precluded from performing procedures considered necessary and material in the circumstances, including reproducing contractor records and documents, should follow Agency access to records guidance (see 1-504).

c. Scanned Documents. The decision to transfer hardcopy documentation to electronic form (scanning) is a matter for auditor judgment. When presented as evidence in litigation, the courts will treat a document reproduced from electronic format as an original. Documents which might be scanned include correspondence, invoices, travel vouchers, quotes, and similar records. Special care must be taken to avoid any alteration or appearance of alteration of the data. DCAA scanner software will default to saving scanned documents as image files, which cannot readily be modified. The software also has the capability to convert a scanned document to Optical Character Recognition (OCR) form. OCR scans are subject to transcription error and may easily be changed in word processing and spreadsheet programs. Agency policy requires scanned documents to be saved in PDF image format.

4-407 Computer-Aided Working Papers **

Agency standard naming conventions (see 4-403i) should be carried throughout the audit working paper package, including storage of the completed assignment official records and the corresponding audit report. As with any audit assignment, the integrity of our audit working papers must be maintained; this is vital with electronic audit files. During an audit, many interactions take place between an auditor, other team members, technical specialists, the supervisory auditor, and the FAO manager. The following requirements apply to the audit workflow process and incorporate standard procedures to protect working paper integrity, specifically the integrity of the official electronic working papers.

a. Working Paper Creation: In order to obtain the latest available guidance, the auditor must first set up an assignment in EPIC and then generate working papers using the CaseWare functionality in EPIC.

b. Work-In-Process Procedures (Interim): During the performance of an audit, working papers should be generated using the CaseWare User Interface. In particular, the report shell initially generated should be used as a starting point for drafting reports. In addition, the auditor must coordinate his/her work with the audit supervisor. This includes interim guidance using Issues in CaseWare as well as obtaining supervisory review and approval of individual working

papers. This requires that electronic files be accessible to audit supervisors and others.

c. Preparing the Completed Working Paper Package for Final Supervisory Review: The auditor should perform the following procedures when an audit has been completed and the working papers are ready for final supervisory review.

(1) Working papers include electronic media, as well as hardcopy working paper documents that are not practical to store electronically. A hard copy folder will be established to house the official hard copy files if there are any. In making a decision whether or not it is practical to scan hardcopy items, rather than maintain paper copies, the following factors should be considered: how long it will take to scan the hardcopy items; how often the item will be used; and any scanning preferences or guidance provided by the supervisor, FAO, or region.

(2) The auditor should confirm that all issues are completed and that auditor(s) have signed-off on all documents. Additionally, the auditor should verify that there are not any outstanding Sync Copies conflicts.

(3) Only three copies of the audit report should be retained in the official file, as follows:

(a) Final, cross referenced draft,

(b) Final report ready for signature, and

(c) Final report, signed and secured in PDF format.

d. Closing Actions: The final closing actions should be completed in accordance with Agency CaseWare package closing action procedures as soon as possible after report issuance and, except for very unusual situations, within 20 working days of report issuance. The procedures should also include the following elements:

(1) The final version of the draft audit report (containing all changes to the draft, except removal of the cross references and final spelling and format changes) must be cross-referenced (see 4-403j(3) & 4-403k) to the working papers and included in the working paper package. Previous versions of draft audit report should not be retained in the current audit working paper file.

(2) The final draft version of the final audit report must be stored with the working papers. The CaseWare software generates a copy of the draft audit report for final processing. The copy created by CaseWare is named "01 DCAA Report-draft". The auditor or supervisor must manually rename the document "01 DCAA Report [EPIC RECORD ID NUMBER] Draft.docx". This file is processed to accept/reject tracked changes, remove cross-references and comments, remove hyperlinks to other documents, and make final formatting changes. The electronic file should then be renamed to uniquely identify that file as the final report according to the convention "01 DCAA Report [EPIC RECORD ID NUMBER]-Final.docx". For audits closed with documents other than reports, replace "Report" with the type of document issued (i.e., MFF, MFR, Letter, etc.) as appropriate for the draft and final. For supplements or revisions, add the designator -S1 or -R1 after the -Final designator, as appropriate.

(3) Once the final draft report is ready for signature, the administrative staff will convert the document to PDF using Adobe Acrobat software. The administrative staff will then save the report in the PDF format and will name that report according to the convention "01 DCAA Report [EPIC RECORD ID NUMBER]-Final-Unsigned.PDF". Once the unsigned report has been reviewed for formatting errors and is ready for signature, the administrative staff will save

the report again in the PDF format and will name the second PDF report according to the convention “01 DCAA Report [EPIC RECORD ID NUMBER]-Final-Signed.PDF”. The version marked “Signed” will be the version that the FAO Manager will sign and secure. Only the signed and secured PDF version of the final report should be transmitted or otherwise used to support future actions related to this assignment.

(4) For reports sent to customers via e-mail, the transmission e-mail must be retained in the official files (see 10-203.9d for e-mail content). The transmission e-mail should be included separately in the CaseWare assignment folder. The e-mail can be added to the CaseWare assignment folder using the “drag/drop” or “copy/paste” method, which will automatically name the document with the email subject line. A copy of the transmittal email should also be saved as a PDF and maintained as part of the record. For supplements or revisions, add the designator –S1 or –R1 in the subject line or name as appropriate.

(5) Only three copies of the audit report should be marked Retain on Cleanup in the official CaseWare file, as follows:

- (a) Final, cross-referenced draft,
- (b) Final report ready for signature, and
- (c) Final report, signed and secured in PDF format

Configure the “Retain on Cleanup” column on the CaseWare Document Manager and uncheck any other copies of the audit report.

(6) The CaseWare package lock down copy should be prepared in accordance with Agency CaseWare package closing action procedures. After lock down of the assignment, assign the FAO personnel (resident auditor/branch manager, supervisors, auditors, FAQs, etc.) access to the archived assignment.

(7) If the auditor receives or prepares supplemental documents/correspondence (e.g., price negotiation memorandum, documentation related to negotiations (15-404), attending a Board of Review (1-403.4), or circumstances described in 4-409) that are directly related to an assignment that has already been finalized, stored and archived. The new documents should be filed in CaseWare in the “Post-Lockdown Documents” folder included in the original assignment folder in CaseWare. When adding documents to a locked-down assignment a dialogue box will prompt the auditor to provide an explanation for the new document.

(8) Records discovered to be missing, lost, or destroyed prior to the date that they are eligible for destruction (and which cannot be recreated) must be reported in accordance with [DCAAM 5015.1](#), Enclosure 6, paragraph 11.

4-408 Computer-Aided Audit Applications **

a. A computer-aided audit application is any audit task that has been automated using a software program. Any application that is developed must be tested before it is used. The extent and type of testing should be based on the complexity of the application and the inherent risk when relying on the results generated.

b. Audit applications done with a computer must fully satisfy the requirements of [2-306.8](#), [2-504](#), or [4-402b](#), as applicable. Thus, working papers prepared with the aid of a computer should be documented in the same manner as those prepared manually. They should clearly describe the

data and procedures employed in the computer application.

c. The amount of documentation will vary depending on the particular computer application employed; however, the data and procedures used in the application must be sufficiently documented and properly retained to satisfy the requirements of 4-402b and to facilitate the re-creation of the application. Examples of matters that may need to be documented to fully explain the computer-aided audit work are:

(1) the basis for formulas used in spreadsheet-type applications or in calculated columns of tabular schedules,

(2) detailed schedules supporting summary schedules, and

(3) the input data if it is not shown in the output.

Depending on the application, the required documentation may be in the form of supplementary printouts from the computer application program or explanatory annotations by the auditor.

d. Proper training, planning, and testing are important factors in ensuring that computers are effectively used and in minimizing the risk of generating inaccurate results. However, just learning about proper design methods and good construction techniques in developing an audit application provides no guarantee that the results will be error-free. Adequate control features need to be identified, designed, and incorporated into the documentation, data entry, processing, and output portions of an audit application. For example, the following control activities could be used for spreadsheet applications, where appropriate:

(1) Retain a listing of the formulas and their relationships.

(2) Attach instructions and identification data with the spreadsheet application.

(3) Create back up files.

(4) Use the software protection/locking features to protect formulas and overall structure.

(5) Use record counts, data totals, hash totals, or other control totals.

(6) Calculate key balances using two alternative methods and then compare the results to make sure they are equal.

(7) Use range and reasonableness check numbers to confirm totals.

(8) Run test data and review the output for accuracy.

e. Auditors should not create electronic files that are so large that they are difficult to store, e-mail, or otherwise handle. When scanning or otherwise obtaining electronic files, the auditor should obtain and retain only necessary data, and should properly prepare audit reports and working papers. When it is necessary to retain electronic copies of contractor data or documents (see 4-406), it should be in an efficient format. Pages scanned in accordance with Agency guidance will usually be less than 100 kilobytes in file size; however, if the settings are incorrect, a single page can take up several megabytes (e.g., when saved as a .BMP file rather than a .PDF file). A document saved in an .RTF format can be several times larger than the same document saved in a .DOC format. All overly large files should be reviewed to ensure they are in the most efficient format and do not contain unnecessary images or data. Significant amounts of data can be embedded or imported into a document or spreadsheet without realizing the significant impact

on file size. Images may be pasted into a document as a .BMP file which can make the document very large, but which may not be easily identified because they are embedded in the document and the auditor cannot see the portions that are in the .BMP format. Similarly, Excel workbooks shall not be embedded into audit reports (see [10-203.14](#)), although that process can be used in working papers. When issuing audit reports, a good rule of thumb is that the file size should be about 50 to 100 kilobytes per page. If the report is significantly larger, it should be checked. Regional RSA staff can provide assistance if needed.

f. Supervisory review to ensure compliance with the auditing standards applies to computer-aided audit applications, just as it applies to any other type audit application. The reviewer must evaluate each application based upon its objectives and the relative sensitivity of the audit conclusions.

4-409 Documentation of Differences of Opinion on Audit Issues**

a. GAGAS requires audit organizations to maintain procedures to provide reasonable assurance that appropriate consultation takes place on difficult or contentious issues that arise among team members in the course of conducting a GAGAS engagement. Examples of differences of opinion on audit issues may include disagreements on the audit opinion, the sufficiency and/or appropriateness of audit evidence, or the nature and extent of audit procedures necessary to meet the audit objectives.

b. Due to the complex nature of our work, it is not uncommon for differences of opinion on audit issues to arise between two or more members of the team during the performance of an audit. In most instances, the audit team can resolve the difference of opinion through discussion of the issue and should strive to do so at the lowest level possible. When differences of opinion occur, it is imperative that the team act in a manner which reflects our core values of teamwork and mutual respect. The audit team should make every effort to reconcile differences of opinion on audit issues before issuing the audit report. If any members of the audit team (auditors, technical specialist, FAQ, supervisor, FAO Manager, RAM) involved in the performance of the audit disagree with other members of the audit team on a significant audit issue, the audit team should meet to discuss and attempt to resolve the issues. Since effective communication is essential to resolving differences of opinion, as an issue is elevated, the discussions should include all parties involved.

c If the audit team members cannot resolve the issue, the issue should be elevated to the next highest level of management. It is the responsibility of the highest level audit team member involved in the disagreement to elevate the issue to the next highest level. Prior to elevating the issue to the RAM, the FAO should prepare a brief summary of the difference of opinion and be prepared to discuss the issues in detail. If the RAM is unable to reconcile the difference of opinion, he/she is responsible for elevating the issues to the Deputy Regional Director. If the Deputy Regional Director is unable to reconcile the difference of opinion, he/she will make a final decision. Each of these consultations must be documented in accordance with GAGAS 5.24.

d If the disagreement is not resolved to the satisfaction of an audit team member, they may, at their discretion, write a dissenting opinion and place the documentation in the “Documentation of Audit Disagreements” folder of the audit package. The documentation should include the specific basis and facts for the disagreement. Additionally, if the unreconciled difference of opinion results in differing questioned, unsupported, or unresolved costs, the documentation

should include information of the dollar impact. As auditing standards require the audit report be fully supported by the working papers, the final working papers must represent the final conclusions reached as contained in the audit report.

e The name of the audit team member who has documented an unreconciled difference of opinion may be excluded from the “DCAA Personnel” section of the applicable audit report if the member so chooses. The audit team must follow the guidance above for unreconciled differences of opinion on significant audit issues even if an assignment is subsequently cancelled.

4-410 Supplemental Revisions to the Audit Working Papers after the Audit Report is Issued**

- a. Audit documentation in the official files must not be altered, deleted or discarded after the report issuance date. This includes the original official electronic CaseWare and hard copy working paper files. However, circumstances may require additions to audit documentation after the report release date. In all cases, the original file must be left intact (see 4-410b). Under the AICPA auditing standards, additional audit procedures and supplemental working papers may be necessary after audit report issuance when, subsequent to the date of the audit report:

- (1) The auditor concludes that one or more procedures considered necessary at the time of the audit, in the circumstances then existing, were omitted.

- (2) The auditor becomes aware that additional facts regarding the subject of audit may have existed at the report date, and such facts might have affected the report.

- (3) Relevant and material developments or events have occurred (e.g., final determinations or resolutions of contingencies or other matters disclosed in the audit report or which had resulted in a departure from the auditor's standard report). See [10-213.1](#) for guidance on supplemental audit reports in this situation.

The auditor should supplement working papers and issue a supplemental report only when necessary under circumstances 1 through 3 listed above, or if a supplemental report would be useful to the requestor or other likely report users. For example, the audit issues are still outstanding/being negotiated or there is a possibility that the audit may be used to settle disputes. When working papers are supplemented, they should contain a concise explanation of the circumstances, and resolution of the issues involved. Guidance on supplemental audit reports is contained in [10-213](#).

- b. When additional audit procedures and/or supplemental working papers are needed after the audit report has been issued due to application of previously omitted procedures, additional facts, or to address subsequent events, the supplemental working papers should be created as a separate set of files. The electronic files should be stored within the “Post-Lockdown Documents” folder generated by CaseWare in the original audit working paper file following the procedures in 4-407d(7). If there are hard copy working papers for the assignment, care must be taken to ensure that the original set which existed at report issuance/assignment closure are not altered in any manner. The auditor should take prudent measures to ensure that the supplemental working papers will not be mistaken for part of the original official working paper package. Supplemental working papers should contain a concise explanation of the circumstance under which they were created. The auditor should ensure that the supplemental working papers:

- are clearly distinguished from the original content;
- fully document the circumstances leading to the additional effort;
- contain a lead schedule summarizing the cost elements/areas evaluated;
- contain structured notes or on-page notes as appropriate (see 4-403.g); and
- properly reflect who performed the additional procedures and the dates that the additional procedures were performed. Working papers must meet Agency documentation standards discussed in 4-403.

The Supplemental WP A and the supplemental lead schedules for the changed cost elements/areas evaluated should be annotated with the updated recommendations/conclusions, if any, and cross-referenced to the working papers supporting the update. Supplemental working papers will be separate from the documentation in the original audit files; place the working papers in the “Post-Lockdown Documents” folder generated by CaseWare.

c. Consideration of Omitted Procedures After the Report Date

Additional audit procedures are necessary when an auditor concludes that a procedure considered necessary at the time of the audit in the circumstances then existing was omitted

(1) The auditor should assess the importance of the omitted procedure to his/her present ability to support the previously expressed opinion or conclusions regarding the audit taken as a whole. The following procedures may be helpful in making an assessment of the importance of the omitted audit procedures:

- review the working papers;
- discuss the circumstances with the personnel involved in the audit (i.e., supervisory auditor, requestor, contracting officer), and others; and
- reevaluate the overall scope of the audit. For example, the results of other procedures that were applied may tend to compensate for the procedure omitted or make its omission less important. Also, subsequent audits may provide audit evidence in support of the previously expressed opinion.

(2) If the auditor concludes that the omission of a procedure considered necessary at the time of the audit report in the circumstances then existing:

- impairs his/her present ability to support the previously expressed opinion or conclusions regarding the audit, and
- the auditor believes there are persons currently relying, or likely to rely, on the report, the auditor should promptly undertake to apply the omitted procedure or alternative procedures that would provide a satisfactory basis for the opinion or conclusions.

(3) If the previously omitted procedure or alternative procedures cannot be applied, the auditor should discuss this matter with the supervisor and/or FAO manager to determine an appropriate course of action concerning responsibilities to the requestor, contracting activities, or other individuals who may rely on the report.

(4) If the additional procedures disclose that the report opinion, conclusions, or recommendations must be updated, follow the reporting guidance in [10-213](#). If no report revision is necessary, annotate the working papers to explain why this is the case.

d. Subsequent Discovery of Information Affecting the Audit Report Results

(1) If, subsequent to issuance of an audit report, the auditor becomes aware of facts or events that would have been evaluated during the course of the audit, had they been known at the time, the auditor should promptly:

- undertake to determine whether the information is reliable, and
- assess whether its impact may be material.

Information at issue may have come into existence either before or after the audit report date. In any case, the auditor should discuss the matter with the contractor at any management level deemed appropriate, and request cooperation in whatever evaluation may be necessary.

(2) When the subsequently discovered information is found to be reliable, the auditor should take action in accordance with the procedures described in the subsequent paragraphs if the nature and effect of the matter are such that:

(a) the report would have been affected if the information had been known at the date of the report and had not been reflected in the audit; and

(b) the auditor believes there are persons currently relying or likely to rely on the audit report who would attach importance to the information.

Consideration should be given, among other things, to the time elapsed since the audit report was issued. When the auditor has concluded, after considering (a) and (b) above, that action should be taken to amend the opinion, conclusions, or recommendations in the original report, a supplemental report should be issued in accordance with [10-213](#).

(3) If the effect on the audit report of the subsequently discovered information cannot be determined without a prolonged evaluation, the issuance of a supplemental audit report will necessarily be delayed. When it appears that the information will require a supplemental report, appropriate disclosure would consist of notification to the requestor and any other persons who are likely to rely on the audit report that supplemental work is being performed and a supplemental report will be issued upon completion of the evaluation.

4-500 Section 5 - Using Information Technology (IT) in Contract Auditing [](#)**

4-501 Introduction [](#)**

a. This section describes how IT can assist in audit of contract costs being estimated and/or incurred by contractors (to include internal control audits), and ways available to obtain related audit assistance. It includes policy and procedural guidelines for using both DCAA and non-DCAA IT resources for technical audit applications.

b. CAM sections [5-400](#) and [5-1400](#), along with the Information Systems (IS) Auditing Knowledge Base, available on the [Operations Technical Services web page](#), include general background and orientation material on IT, Information Systems (IS), and related terminology. More specific guidance on contract audit objectives related to IS includes:

- (1) Evaluating IS General Internal Controls (5-400).
- (2) Evaluating IS Application Internal Controls (5-1400).
- (3) Auditing the economy and efficiency of contractor IT operations.

4-502 Policy on Use of IT **

4-502.1 General Criteria for Using IT in Audit Applications **

a. Auditors are capable of performing many audit tasks using IT, and DCAA strives to take full advantage of this capability. The growing cost and scarcity of auditor time, coupled with increasing economy and efficiency of IT, can make the choice of using it increasingly cost-effective.

b. IT resources available to DCAA auditors include any computer system and software from:

- (1) the contractor that has submitted the data,
- (2) DCAA regional and field audit offices, and
- (3) Headquarters' Technical Audit Services Division (OTS).

If the data is written or copied to any electronic media, it can be accessed by any one of a number of data manipulation software tools. Due to the transportability of data, processing can take place at the contractor site or at any other processing site available to DCAA. Assistance in requesting and obtaining contractor data is available from regional and OTS specialists.

c. Documents used to enter information into the computer for processing, certain computer files, or other evidential matter required by the auditor may exist only for a short period or only in electronic form. In some computer systems, input documents may not exist at all because information is directly entered into the system. A contractor's data retention policies may require the auditor to request retention of some information for his/her evaluation or to perform audit procedures when the information is available. In addition, certain information generated by the computer for management's internal purposes may be useful in performing analytical tests (e.g., system management facilities and statistical analysis system data).

d. Using IT may also provide an opportunity to apply certain procedures to an entire population of accounts or transactions rather than performing sampling. In addition, in some accounting systems, it may be difficult or impossible for the auditor to analyze certain data or test specific control activities without using IT resources.

e. When performing an audit, the auditor should employ an appropriate combination of both manual and IT related audit techniques. In determining whether to use IT, the auditor should consider such factors as:

- (1) the auditor's expertise, knowledge and experience with IT,
- (2) the availability of suitable IT resources,
- (3) the efficiency and effectiveness of using IT related techniques over manual ones,
- (4) time constraints,
- (5) integrity of the contractor's information system and IT environment, and
- (6) level of audit risk.

f. Certain planning steps should be taken in preparing for the application of selected IT related audit techniques such as:

- (1) setting objectives for using IT,
- (2) determining the accessibility and availability of IT resources and data,
- (3) defining the procedures to be taken (e.g., statistical sampling, recalculation, confirmation, etc.),
- (4) defining output requirements,
- (5) determining resource requirements, and
- (6) documentation of IT used including objectives, high-level flowcharts, and any operating instructions.

g. Data files, such as detailed transaction files, are often retained for only a short period of time; therefore, the auditor should make arrangements for the retention of the data covering the appropriate audit time frame. If the auditor plans to access the contractor's IT resources and data, arrangements should be made well in advance of the needed time period in order to minimize the effect on the contractor's IT environment. The auditor should also assess the effect that any changes to the IT environment may have on the use of IT in any audit applications. In doing so, the auditor should consider the effect of these changes on the integrity and usefulness of IT, as well as the integrity of any data used.

h. The auditor should obtain reasonable assurance of the integrity, reliability, usefulness, and security of IT through appropriate planning, design, testing, processing and evaluation of documentation. This should be done before reliance is placed upon the IT. The nature, timing and extent of testing is dependent on the availability and stability of any IT resources used.

i. The use of IT should be controlled to provide reasonable assurance that the audit objectives and the detailed specifications of the IT related audit activity have been met. Certain tests should be performed such as:

- (1) a reconciliation of control totals,
- (2) a review of output for reasonableness,
- (3) a review of the logic, parameters or other characteristics of the IT, and
- (4) a review of the contractor's IT general controls which may contribute to the integrity of the IT (e.g., program change controls and access to system, program, and/or data files) before the auditor relies upon system outputs.

j. Use of IT for audit applications should be sufficiently documented to provide adequate audit evidence. Specifically, working papers should include a description of the IT related audit activity, its planning and execution, and any output produced along with conclusions reached.

4-502.2 Use of Contractor IT **

a. With some computerized applications, access to contractor IT and data may be clearly essential for proper audit of costs incurred or proposed.

b. When possible, meet audit needs through adjustments to normally scheduled contractor computer runs rather than by special runs solely for contract audit purposes. Consider using reports or other records that are otherwise available before requesting special reports. This requires knowledge of the usefulness of available contractor output. Be receptive to suggestions of the contractor's personnel, so long as audit objectives are achieved effectively and efficiently.

c. In many applications the value of the audit benefit received will far exceed the net cost to the contractor. Often, added IT costs are more than justified by benefits accruing to the contractor, such as accelerated cash flow resulting from timely processing of progress payment requests or public vouchers, greater assurance of the accuracy of records, and reduced administrative support to contract audit requirements. Sample selections, cost reconciliations, and special analyses requested by the auditor often save the contractor other significant audit support efforts; and the audit data can often be used by the contractor's operating personnel to improve performance of their assigned tasks.

4-502.3 Cooperation with Internal and Independent Auditors **

Obtaining cooperation from the contractor's internal audit staff and/or independent auditors can facilitate the use of IT in auditing contract costs. These groups normally perform reviews of the company's IS and the data processed. Obtain and use this assistance following the guidelines in 4-202 and 4-1000.

4-503 Organizational Support of Auditing Using IT **

DCAA maintains a complete network of regional and Headquarters resources to help the field auditor determine the feasibility of using IT resources for audit applications and implementing those that are appropriate. (These resources are, for the most part, the same as are available to assist the field auditor plan and/or perform the types of audits noted in 4-501b.)

4-503.1 Regional IS Auditors and Computer Specialists **

One or more auditors in the regional special programs offices are responsible for coordinating the overall implementation of auditing using IT policy and programs within the regions. These auditors provide technical guidance and assistance in performing audits using IT resources.

4-503.2 Technical Support Branch **

a. OTS provides guidance and assistance for audit applications using IT resources. In addition, OTS is responsible for coordination and control of computer program development to ensure adequate dissemination of new and/or refined IT audit techniques

b. OTS provides technical guidance, support, and assistance for all aspects of audit applications using IT including internal control evaluations, information access, retrieval, displaying, and reporting; capacity planning; computer performance evaluation; and system tuning. OTS also provides direction and assistance in using generalized data management and data manipulation software packages (both commercially available and OTS developed) such as Power BI, SAS, FOCUS, SQL, MSAccess, and VisualBasic.

c. OTS provides guidance and assistance involving statistical sampling, correlation analysis, and improvement curves (EZ-Quant); use of economic data; Flexible Progress Payments; and the computations used to determine if a lease should be classified as an operating lease or a capital lease in accordance with GAAP. In addition, OTS provides onsite and written directions for complex applications of statistical sampling (Variable and Attribute Sampling Guidebooks), correlation analysis (Graphic & Regression Analysis Guidebook), and improvement curves (Improvement Curve Analysis Guidebook).

4-503.3 IT Related Training **

DCAA's general auditor training and career development plan includes courses designed to provide a basic understanding of Information Systems and Information Technology and the audit concerns associated with this environment. The courses are offered through the Defense Contract Audit Institute (DCAI). More specialized courses, offered through both Government and non-government sources, are available on an as-required basis.

4-504 IT Audit Tools **

4-504.1 Generalized Audit Software **

Generalized audit software is a computer program or series of programs designed to perform certain automated functions. These functions include reading computer files, selecting data, manipulating data, sorting data, summarizing data, performing calculations, selecting samples, and printing reports or letters in a format specified by the auditor. This technique includes software acquired or written for audit purposes and software embedded in information systems. When using generalized audit software, the auditor should take appropriate steps to protect the integrity of the contractor's data.

4-504.2 Application Software Tracing and Mapping **

Application software tracing and mapping is the technique of using specialized tools to analyze the flow of data through the processing logic of the application software and document the logic, paths, control conditions, and processing sequences. Both the command language or job control statements and programming language can be analyzed. This technique includes program/system: mapping, tracing, snapshots, parallel simulations, and code comparisons. When using application software tracing and mapping, the auditor should confirm that the source code being evaluated generated the object program currently being used in production. The auditor should be aware that application software tracing and mapping only points out the potential for erroneous processing; it does not evaluate actual data.

4-504.3 Audit Expert Systems **

Audit expert systems or decision support systems are tools that can be used to assist auditors in the decision-making process by automating the knowledge of experts in the field. This technique includes automated risk analysis, system software, and control objectives software packages. When using audit expert systems, the auditor should be thoroughly knowledgeable of the operations of the system to confirm that the decision paths followed are appropriate to the given audit environment/situation.

4-504.4 Test Data **

Test data are simulated transactions that can be used to test processing logic, computations and controls actually programmed in computer applications. Individual programs or an entire system can be tested. This technique includes Integrated Test Facilities (ITFs) and Base Case System Evaluations (BCSEs). When using test data, the auditor should be aware that test data only point out the potential for erroneous processing; this technique does not evaluate actual data. The auditor also should be aware that test data analysis can be extremely complex and time consuming, depending on the number of transactions processed, the number of programs tested, and the complexity of the programs/system. Before using test data the auditor should verify that the test data will not affect the contractor's live system.

4-504.5 Utility Software **

Utility software is a computer program often provided by a computer hardware manufacturer or software vendor and used to support running the system. This technique can be used to examine processing activity; test programs, system activities, and operational procedures; evaluate data file activity; and analyze job accounting data. When using utility software, the auditor should confirm that no unplanned interventions have taken place during processing and that the utility software has been obtained from the appropriate system library. The auditor should also take appropriate steps to protect the integrity of the organization's system and files since these utilities can easily damage them.

4-600 Section 6 - Audit Sampling and Other Analytical Procedures **

4-601 Introduction **

Auditors should make optimum use of all audit techniques which will increase the efficiency and effectiveness of the audit. The appropriate use of audit sampling and other analytical procedures will assist the auditor in reaching this goal. Audit sampling includes statistical sampling. Other analytical procedures include the use of correlation, regression, time series, and improvement curve analysis. These techniques help to ensure the effective use of resources while improving audit quality.

4-602 Audit Sampling **

This section provides guidance for planning, performing, and evaluating audit samples.

4-602.1 Selection Methods That Are Not Sampling – Judgmental Selection **

Auditors employ multiple selection methods to assist in obtaining sufficient and appropriate audit evidence. However, many of these methods are not sampling by definition. For clarification, certain common selection methods which are not sampling include:

- (1) selection of 100 percent of the items within a universe,
- (2) selection of all items within a universe which have a particular characteristic (for example, all items over a certain dollar amount – outliers only; or specific sensitive transactions, such as Executive Airfare in a G&A travel account), or
- (3) a decision not to select any items (i.e., no auditing procedures applied due to low risk or immateriality of items).

Sampling is used to draw conclusions about a universe. Non-sampling selection methods, such as the three listed above, do not permit inferences. They are non-representative selections. DCAA uses the term "Judgmental Selection" to classify this type of selection method. Judgmental selection of items for audit examination may be a viable alternative to sampling, especially when dealing with a small universe, or where a small number of transactions represent a significant portion of the universe value. The judgmental selection findings only apply to the specific items selected. The findings must not be projected to the portion of the universe not tested. This is a key distinction between sampling versus judgmental selection. Judgmental selection may be used to render an opinion on the account balance if the selection results in adequate coverage of the universe to meet the audit objectives. See 4-403.g for guidance addressing required working paper documentation for a judgmental selection.

4-602.2 Sampling **

a. Audit sampling is the application of an audit procedure to less than 100 percent of the items within a universe for the purpose of projecting a conclusion to that universe.

b. Sampling is an important tool to gain information and draw a conclusion about a universe without the need to examine the entire universe. A key expectation is that the sample items reviewed will be representative of the universe taken as a whole (i.e., reflect the same characteristics that occur in the universe). Sampling is used by the auditor to obtain sufficient appropriate evidential matter and is performed because it is generally more efficient than testing 100 percent of a universe. Some important advantages of audit sampling include:

- (1) more efficient, saves audit time,
- (2) more effective way of auditing large complex universes, and
- (3) meets the audit objective providing defensible audit results.

4-602.3 Statistical Sampling **

a. Advantages of statistical sampling include:

- (1) Sample selection is objective and thereby defensible,
- (2) Sample results may be projected to the sampling frame (a group of items from which a sample will be selected),
- (3) Samples may provide coverage without 100% testing, and
- (4) Sampling results provide for a statistical measurement of sampling reliability and/or sampling error (precision at a particular confidence level).

b. Probability theory drives the random sample selection, evaluation of the results, and measurement of uncertainty. Each item in a sampling frame has a known and calculable probability of being selected. Additionally, in stratified random sampling (see 4-602.8c), each sampling unit within a stratum has a known and calculable probability of being selected. The manner of selection of the items must preclude any personal influence as to which items are included in the sample.

4-602.4 Scope and Degree of Testing **

a. The scope and degree of testing is a matter of professional judgment by the auditor. The decision will be influenced by prior experience, materiality, sensitivity, and other factors, including recognition that a statistical sample can be defended as truly objective. Application of audit sampling recognizes that a complete review of all the transactions which support a proposal, claim, or other form of financial representation generally is unnecessary or impractical. It is possible to support a professional opinion regarding a contractor's representation by reviewing transactions on a sampling basis. Review of all representations may be appropriate when a few transactions or items of large amounts are involved or when it is necessary to develop detailed information devoid of sampling error, such as in the case of support for legal action.

b. In selecting the items to be tested, and in determining the extent of the examination, the auditor must have an understanding of the control or account to be tested. To obtain this level of understanding, the auditor may need to conduct a preliminary selection of only a few items to

gain an understanding of the transaction(s) or process flow, controls applied, and types of supporting documentation available. In addition, it is important to profile the account transaction detail to gain an understanding of the type of transactions it contains; both in characteristics as well as transaction dollar values. (For example, the account may include credits, accruals, reversals, and zero-dollar items.) The following guidelines should be considered:

(1) Examination of large transactions (the meaning of "large" will vary; thus, a \$10,000 item in a \$100,000 claim would deserve attention, but the same item might not be "large" in a \$10 million indirect cost pool in which the Government shares a small percentage).

(2) Review of transactions of an unusual or sensitive nature.

(3) More extensive tests in areas where procedures or internal controls are known to be weak or where deficiencies were disclosed in previous audits, where errors or items of a questionable nature are more likely to occur in certain departments or in records produced by certain categories of employees, during certain periods of reorganization, or where personnel are assigned unfamiliar tasks.

(4) Lapse of time since previous tests.

(5) Special attention to those areas where incorrect charges would have the greatest effect on the costs to the Government.

(6) Trend information from previous audits.

(7) Testing of other transactions where the total amount may be significant in the aggregate.

c. There exists an interdependence of audit sampling and the other audit techniques that serve as sources of reliance for audit conclusions and recommendations. Seldom is an audit recommendation based solely on the evaluation of the sample. In the examination of contract costs, the auditor's objective is to report an informed opinion on the propriety of the contractor's cost representations. In expressing an opinion, the auditor does not require complete certainty (which may not be practical to obtain) regarding the contractor's representations. The auditor only needs reasonable assurance that the audit conclusions are substantially correct. An understanding of this relationship is essential to the effective application of audit sampling to contract auditing. It is this relationship and understanding that guides the auditor's judgment in formulating an effective statistical sampling plan that meets the audit objective.

4-602.5 Use of Information Technology to Assist in Sample Selection **

a. DCAA has available a number of automated tools to assist auditors in statistical sampling, including the Variable Sampling Applications Program (VSAP). VSAP is a DCAA developed software which performs statistical sampling. VSAP will be used by auditors for variable sampling applications when performing Classical Variable Sampling, and for random number generation as part of acceptance sampling applications.

b. The VSAP software has been designed to read comma separate values (.csv) files and data files created in MS Excel (with .xls and .xlsx extensions). In addition, VSAP generates Excel worksheets to assist the auditor in preparing and documenting the applied sampling procedures for each step in the sampling process.

4-602.6 Sampling Applications **

a. The sampling procedures applied will be controlled by the audit objective. Audit sampling can be used to conduct compliance tests to determine whether certain controls or procedures are operating effectively, or substantive tests to determine an amount or value of a projection.

b. Generally, the auditor will use acceptance sampling for compliance testing and variable sampling to conduct substantive testing. These two sampling techniques are further distinguished as either acceptance or sampling for substantive tests of details. The purpose of acceptance sampling is simply to either accept or reject a statement of condition, whereas variable sampling for substantive tests of details provides an answer to the question of either how many or how much.

4-602.7 Acceptance Sampling **

a. Acceptance sampling is performed when there are only two possible outcomes from the evaluation of a sample item: the sampled attribute(s) either is or is not in compliance with the law, regulation, or internal control being tested. An attribute is any characteristic of a sampling unit that can be classified as a pass or fail of a test. An attribute test is built around questions answerable by either "yes" or "no". In acceptance sampling, attributes should be evaluated individually so an auditor can make a pass or fail decision relative to each tested feature of the system or sampling frame being audited. Each attribute is tested separately, and results are evaluated separately for each attribute.

b. Acceptance sampling is typically used for evaluating a contractor's internal controls. This includes the evaluation of policies, procedures, and practices to determine the adequacy of internal controls or operational efficiency. Since perfection is seldom expected, there is some level of noncompliance that can be tolerated without altering the planned, assessed level of control risk. Acceptance sampling is designed to discern whether noncompliance is within tolerable limits.

c. Acceptance sampling procedures are designed to test whether the rate of a particular type of error exceeds a specified acceptable or tolerable level. The procedures are pass/fail tests which place limits on the risk that the results will lead to a wrong conclusion. If the number of errors found in the sample exceeds the acceptance number, the sampling frame is deemed unacceptable with respect to the tested attribute. In acceptance sampling, attributes should be evaluated individually so an auditor can make a pass/fail decision relative to each tested feature of the system or universe being audited.

d. Acceptance sampling does not estimate questioned costs. Instead, poor compliance revealed by an acceptance sample would normally prompt recommendations for system changes.

e. The auditor should identify the sampling unit for the attribute(s) being tested and include all sampling units pertinent to the acceptance sampling objective. Data profiling must have been completed to properly establish the sampling frame. The sampling frame can be used to test multiple attributes if the sampling units within the sampling frame are applicable to the all the attributes being tested.

f. The sampling frame should consist of sampling units that are essentially alike, or homogeneous and properly profiled for each attribute being tested for the acceptance sample. If

sampling units within the sampling frame are not applicable to a particular attribute being tested, that attribute must establish a different sampling frame with an appropriate sampling unit. If the auditor is determining a sampling frame based on historical data (i.e. estimated sampling frame), the auditor is required to contact a Region/CAD QM Technical Specialist for assistance.

g. The sampling frame should only include sampling units appropriate for the acceptance sample. Any sampling units deemed invalid or inappropriate for the attribute(s) being tested should be removed from the sampling frame. If the auditor determines the sampling frame includes invalid sampling units not intended to be included in the acceptance sample during the testing phase, the auditor is required to contact a Region/CAD QM Technical Specialist for assistance.

h. If the auditor is determining a sampling frame based on historical data because the current/actual sampling frame has not been established for the acceptance sample (i.e. estimated sampling frame), the auditor is required to contact a Region/CAD QM Technical Specialist for assistance.

i. The tolerable error level is the measure of acceptable errors with respect to a specific attribute or control. The tolerable error level is the maximum error rate the auditor is willing to accept, defined as low, medium, or high. The tolerable error levels are described as:

- Low Tolerable Error Level - the sample size and acceptable number of errors represent a 90% confidence level and a maximum 2% tolerable error rate.
- Medium Tolerable Error Level - the sample size and acceptable number of errors represent a 90% confidence level and a maximum 5% tolerable error rate.
- High Tolerable Error Level - the sample size and acceptable number of errors represent a 90% confidence level and a maximum 10% tolerable error rate.

j. The sample size determination for acceptance sampling is based on (1) the number of sampling units within the sampling frame and (2) the tolerable error level the auditor established. Once the auditor establishes the sampling frame and tolerable errors level (low, medium, or high), the auditor will use the sample size table below to select the appropriate sample size for each attribute independently. The acceptable number of errors are shown in parenthesis.

Sample Size (Acceptable Number of Error)			
Sampling Frame Size	Low Tolerable Error Level	Medium Tolerable Error Level	High Tolerable Error Level
Under 75	Do Not Sample	Do Not Sample	Do Not Sample
75 to 100	69 (0)	58 (1)	55 (3)
101 to 125	67 (0)	56 (1)	55 (3)
126 to 150	80 (0)	61 (1)	58 (3)
151 to 200	87 (0)	67 (1)	60 (3)
201 to 250	92 (0)	66 (1)	61 (3)
251 to 500	102 (0)	73 (1)	63 (3)

501 to 750	106 (0)	73 (1)	64 (3)
751 to 1000	108 (0)	75 (1)	64 (3)
Over 1000	114 (0)	77 (1)	65 (3)

k. If the auditor has a sampling frame under 75 sampling units or the auditor believes the acceptance sampling does not fall under the low, medium, or high tolerable error levels, the auditor is required to contact a Region/CAD QM Technical Specialist for further assistance.

l. Once the sample size has been determined, the auditor must use the random number feature within VSAP to select which items will be tested. If random numbers will not accomplish the audit objectives due to the nature of the data, the auditor is required to contact a Region/CAD QM Technical Specialist to determine and document the best selection method.

m. The pass/fail purpose of the sampling attribute is accomplished when the acceptable number of errors is exceeded or when the evaluation of every sample item is completed, whichever comes first. The acceptable number of errors is the maximum number of errors (non-compliances, failures, etc.) the auditor is willing to accept for each attribute. The acceptable error number can vary from one attribute to another. If the number of errors or non-compliances exceeds the acceptable error number for an attribute, the attribute would have failed the acceptance sample. The acceptable number of errors has been established as 0 (low), 1 (medium), and 3 (high), based on the tolerable error rate for each attribute.

n. Stratification may be employed to ensure adequate representation for certain groups of sampling units. It is required the auditor contact a Region/CAD QM Technical Specialist for assistance when considering the use of stratification in an acceptance sampling application.

o. In certain instances, the auditor may replace selected items in a statistical sample. Once the sample is selected, an item should be replaced only if it was mistakenly or inadvertently included in the sampling frame from which the sample was drawn. Sample items should not be replaced for the sake of convenience or other subjective reasons. Selection bias is introduced into the statistical sample when replacement selections are substituted for validly selected items. The sampling plan should specify the procedure for handling replacement items. It is required the auditor contact a Region/CAD QM Technical Specialist for assistance when the need for replacement sample items has occurred.

p. The acceptance sample for each attribute is considered accomplished when the acceptable number of errors is exceeded or when the evaluation of every sample item is completed, whichever comes first. If the auditor is unable to complete the planned attribute sample procedures, the statistical evaluation of the acceptance sample is considered incomplete. The auditor cannot provide an acceptance sampling conclusion or opinion for the attribute(s) that have not completed the planned attribute sample procedures. The auditor is required to coordinate with a Region/CAD QM Technical Specialist for additional guidance on how to proceed.

q. The audit report will include sampling details such as the attributes tested and whether each attribute passed or failed the acceptance sampling. In expressing an opinion on acceptance sampling, the auditor must document the pass or fail for each attribute examined. The auditor should include the results in terms of the tolerable error rate associated with the tolerable error

level selected (e.g. “We selected a low tolerable error level for our acceptance sample. Based on the result for our acceptance sampling for attribute XYZ, we determined that the error rate in the sampling frame was no more than 2% for the entire sampling frame at a 90% confidence level.”).

r. The following acceptance sampling situations require coordination with a QM Technical Specialist:

- Invalid sampling units in the sampling frame;
- Use of an estimated sampling frame;
- Not utilizing the established tolerable error levels and rates;
- Selection method other than random numbers;
- Use of stratification;
- Replacement of sample items; and
- Incompletion of acceptance sample testing.

4-602.8 Variable Sampling **

a. Variable Sampling is generally used to verify account balances and estimate any differences between the contractor’s claimed or proposed amounts and those supported by the auditor’s evaluation. The sampling frame (e.g., an account or bill of material) is the entire grouping of items from which a sample will be drawn. Variable sampling can be applied to proposals, incurred costs, progress payments, forward pricing rates, and defective pricing, as well as any audit involving adjustments from the amount initially contained in the contractor’s assertion.

b. An important objective of variable sampling is to estimate a particular universe characteristic such as total unallowable costs (or questioned cost). The estimated questioned cost is commonly represented by the “point estimate”. A point estimate strikes a balance between potential understatement (considering both likelihood and amount) and potential overstatement of the true questioned costs. In statistical sampling, “confidence level” and “precision” are used to measure the reliability and accuracy of the point estimate. The confidence level deals with “sureness” (or assurance) while precision deals with “closeness” (or accuracy). All statistical sampling evaluations will be performed using a 90 percent confidence level.

c. Statistical sampling for variables can be performed in two ways, depending on the individual sampling units. These are Classical Variable Sampling (CVS) and Probability Proportional to Size (PPS) Sampling. With CVS, each individual item in the sampling frame is treated as a sampling unit and has an equal chance of being selected. With PPS, each individual dollar in the sampling frame is treated as a sampling unit, and each item has a selection probability that is proportional to its dollar (absolute value) value.

(1) In CVS, sample items (invoices, timecards, travel vouchers, etc.) should be selected using VSAP. In these applications, the auditor may employ stratification to enhance sampling reliability and accuracy. A statistical sample requires that sampling units within a stratum be randomly selected and all units within each stratum of the sampling frame should have an equal chance for selection. The auditor then evaluates the sample items and determines any cost that should be questioned. Stratification is decided as part of the sampling plan and

while it is usually based on dollar value it may also be based on other characteristics. It is required the auditor contact a Region/CAD QM Technical Specialist for assistance when considering the use of stratification in a variable sampling application.

(a) Stratification consists of partitioning the sampling frame into similar, smaller groups (strata) where a simple random sampling method is used independently to draw samples from each stratum. Stratification does not change the sampling frames. Stratification is primarily used in Classical Variable Sampling.

(b) The usual purpose of stratification in contract audit sampling is to improve sampling precision. When stratification is used, the minimum number of sample strata will be three and each stratum should have at least 30 sample items. The use of three strata is related to the nature of accounting data, which tends to include a few very large amounts, a number of moderately large amounts, and a large number of small amounts. Stratification typically tightens the sample precision by reducing the range of variability in the sample results in each stratum.

(c) The most common single basis for stratification in contract audit sampling is the recorded dollar amount of the individual items in the sampling frame. Other bases for stratification are possible, either instead of, or in conjunction with dollar-based stratification. In many situations, the auditor may believe that other characteristics of the items in the sampling frame significantly affect the probability that certain amounts are in error. For example, unallowable costs may be more frequently encountered in vouchers that relate to certain types of transactions, departments, or payees.

(2) Probability Proportional to Size (PPS) Sampling, is a type of variable sampling in which each individual dollar in the sampling frame is treated as a sampling unit. Each physical unit in the sampling frame has an equal chance of selection and the selection probability is proportional to its dollar (absolute value) size. PPS is predominantly useful when the testing data includes clusters, where the auditor is unable to obtain the lower-level details behind the clusters. If an auditor seeks to use PPS, they are required to coordinate with a Region/CAD QM Technical Specialist to determine the acceptability of the approach and are required to coordinate with the HQ-OTS QM Branch for the sample selection and evaluation.

d. The variable sampling frame should consist of costs that are essentially alike, or homogeneous and properly profiled. When the intended variable sampling frame is between 400 and 1000 items, the auditor is required to coordinate with a Region/CAD QM Technical Specialist to determine if statistical sampling is appropriate. The sampling unit is the base element that will be examined, taking into consideration the use of Classical Variable Sampling or Probability Proportional to Size Sampling. A sampling unit may be a document or record, such as a purchase order or travel voucher, or may be an item reflected on the document or record. State the sampling technique to be applied. Document the type of sampling application to be applied; the auditor shall select Classical Variable Sampling (CVS) or Probability Proportional to Size (PPS) Sampling.

e. In determining the homogeneity of the potential variable sampling frame, the auditor should consider the following (not all inclusive):

- Are the costs in the sampling frame alike enough so that we expect questioned costs across transactions to be for the same general reasons?

- Are the expected questioned ratios similar across the sampling frame? If there are transactions with significantly different expected questioned ratios, auditors should consider if those transactions should be included in the sampling frame or if they need to be reviewed separately (and document the appropriate level of testing, if any, based on auditor judgment).
- Are the costs in the sampling frame consistent with the intended sampling objective?
- Can we develop an equitable method to allocate projected questioned costs across all pools, accounts, years, business segments, etc. in the sampling frame? Consider how the projected questioned costs will be reported and negotiated.

If the auditor concludes the potential sampling frame lacks homogeneity, separate methods of testing or analytical procedures should be considered.

f. Auditors are required to coordinate with a Region/CAD QM Technical Specialist if considering combining different indirect cost accounts, costs from multiple fiscal years, contracts, cost pools, cost centers, or business segments, into one sampling frame. The decision whether to combine accounts, contracts, or years should be based on a documented analysis of homogeneity.

g. The auditor should consider the following in establishing the necessary minimum sample size for variable sampling. For sampling frames containing at least 400 items, the sample size selected depends on an assessment of two parameters:

- desired precision, which is set at 4 percent in the sample size table below, and
- expected error rate, which is determined by the audit team.

The table below should be used to determine the appropriate, minimum sample size:

Expected Error Rate	Sample Size
0-5%	81
6-10%	153
11-15%	216

The sample sizes in the above table reflect only the minimum number of sample items. Any other selections (e.g., outliers, high risk items) would be in addition to the sample sizes shown in the table. If the sample size is greater than 10 percent of the sampling frame, but less than or equal to 20 percent of the sampling frame, the auditor is required to coordinate with a Region/CAD QM Technical Specialist to determine if sampling is appropriate. When the sample size is greater than 20 percent of the sampling frame, statistical sampling is not appropriate. The above table uses a confidence level of 90 percent. The table also assumes a desired precision of 4 percent. If the auditor believes the desired precision should be greater or less than 4 percent, the auditor is required to coordinate with a Region/CAD QM Technical Specialist. The sampling plan must document the rationale considered to assess the sample size parameters and determine the associated minimum sample size. Auditors will not perform statistical samples on sampling

frames with less than 400 items. The auditor should consider the following in selecting the appropriate risk levels for the sample size parameters.

(1) Expected error rate. This column represents the auditor's expectation of audit findings, in terms of questioned costs as a percentage of dollars examined. When setting any expected error rate, the auditor must coordinate with a Region/CAD QM Technical Specialist. Lower expected error rates result in smaller sample sizes, reflective of the auditor's expectation of few misstatements. Higher expected error rates reflect the auditor's expectations that a large number of errors exist in the sampling frame. For example, contractor controls to identify unallowable costs are poorly designed or not operational.

(2) Each sampling application requires its own unique, tailored, and documented assessment based on auditor judgment. Considering the expected error rate will assist the auditor in selecting a sample size appropriate for the audit, balancing materiality and audit risk. All rationale used in assessing the expected error rate should be adequately documented in the sampling plan. If the auditor assesses the expected error rate to be greater than 15 percent, they must coordinate with a Region/CAD QM Technical Specialist.

h. As part of the sample evaluation, the auditor, in coordination with a Region/CAD QM Technical Specialist, will determine whether the sample results are representative of the sampling frame and should be projected. The following factors should be considered during the evaluation process:

(1) Relationship between desired and achieved precision. If the achieved precision is less than or equal to the desired precision, the sample is generally considered acceptable for projection purposes and inclusion in the audit results. If the achieved precision is greater than the desired precision, the sample results may still be acceptable for projection given other considerations such as the risk associated with the audit, the sampling frame, and other tests performed related to the universe.

(2) Relationship between margin of error and point estimate, known as relative precision. If the relative precision is very high (25 percent or higher), the sample results may still be acceptable for projection, but the auditor should consider the qualitative aspects of the questioned costs, such as the systemic nature of the findings or homogeneity of the sampling frame.

i. All rationale used in determining whether a sample result is acceptable for projection purposes should be thoroughly documented in the audit working papers. When questioned costs are identified in the sample items, the auditor is required to coordinate with a Region/CAD QM Technical Specialist during the evaluation of the sample results. If the auditor, in coordination with the Region/CAD QM Technical Specialist, determines that sample reliability is insufficient to project sample results to the sampling frame, the auditor must determine what additional steps are required to render an opinion regarding the subject costs. The auditor has the option of:

- expanding the sample (increasing the sample size may result in a lower achieved precision),
- abandoning the sample projection and report the results only for the specific items reviewed, or
- selecting additional items of interest based on the nature of audit findings and

potential for additional questioned costs.

Regardless of which methodology is chosen, auditor judgment should be documented appropriately ensuring the risk has been addressed. The auditor must also consider reporting any other qualitative concerns based on the sample results.

j. For variable sampling, audit reports with projections will include the confidence level, confidence interval boundary amounts, point estimate, margin of error including an explanation of what the margin of error represents, and achieved precision. If the results were not projected, the audit report should explain the reasons why the results were not projected, and the impact, if any, on the audit.

k. The following variable sampling situations require coordination with a QM Technical Specialist:

- Use of Probability Proportional to Size (PPS) Sampling;
- Use of stratification;
- Combining multiple accounts, contracts, years, etc. into one sampling frame;
- Setting desired precision above or below 4 percent;
- Setting any expected error rate (all sampling plans);
- Sampling frames between 400 and 1000 items;
- Sample sizes greater than 10 percent of the sampling frame;
- Performing manual sample selections or evaluations;
- Outliers identified and the auditor considers leaving the outliers in the sampling frame;
- Invalid unexpected sample items;
- The desire for two-point estimates from one sampling application;
- Sample evaluation when questioned costs were identified; and
- If a sampling application has a high risk of litigation.
- Auditors must coordinate with a Region/CAD QM Technical Specialist if considering combining different indirect cost accounts, costs from multiple fiscal years, contracts, cost pools, cost centers, or business segments, into one sampling frame. The decision whether to combine accounts, contracts, or years should be based on a documented analysis of homogeneity.

4-602.9 Sampling Plan Design and Documentation **

a. The successful audit application of sampling begins with the design of the sampling plan. Sampling plans are required for all statistical sampling applications. The auditor should seek to develop a sampling plan that will optimize support for conclusions in return for the time spent in the selection, examination, and evaluation of the sample. Sampling plans must be documented in the working papers in sufficient detail to meet the requirements of the GAGAS attestation or performance audit standards.

b. There are detailed elements within the sampling plan that are applicable to both acceptance and variable sampling. In addition, there are detailed elements specific to variable sampling or acceptance sampling.

c. Detailed elements of a sampling plan are:

- Identify sampling objective(s), sampling approach, and error type(s) to be tested;
- Describe the universe, data profiling, items removed from the universe, and outliers;
- Describe the sampling frame and sampling unit;
- Document homogeneity of the sampling frame;
- Document justification for stratification, if used;
- Document the desired precision, expected error rate/risk, tolerable error level, acceptable number of errors, confidence level, and the resulting sample size as appropriate;
- Describe the sample selection method and random sampling seed;
- Describe how sample results will be evaluated;
- Document coordination with the QM Technical Specialist.

(1). Identify Sampling Objective(s), Sampling Approach, and Error Type(s) to be Tested. A prerequisite to the application of any sampling process is the need to identify the specific objectives to be attained by examination of the area under evaluation. Prior to initiation of the sampling process, the auditor should definitively set forth, in the sampling plan, the characteristics and values to be examined during the audit, as well as the sampling approach. The auditor's sampling objective should satisfy the audit objectives of the area being audited. The precise type of errors, occurrences, or values being audited must be defined to design an economical or efficient sampling plan. The objective should define what specific audit procedures will be applied. To define the objective, the auditor needs to have knowledge or understanding of the audit area to be evaluated. This knowledge can be obtained from prior audit history or other applied analytical procedures and may require the review of a selection of items to obtain the necessary knowledge to effectively plan a sample.

(2). Describe the Universe, Data Profiling, Items Removed from the Universe, and Outliers. A universe is a group of items or transactions from which information is desired and includes all items which could potentially be examined. The auditor should determine the completeness and accuracy of the universe before sampling and the working papers should include evidence of reconciliation among the contractor's assertion, universe, sampling frame, and selected items for examination.

(3). Describe the Sampling Frame and Sampling Unit. The sampling frame is a subset of the universe and consists of items remaining after the outliers or sensitive transactions have been segregated for separate review or other items where no review will be made based on risk or materiality. The sampling frame is a group of items from which a sample will be selected.

(4). Document Homogeneity of the Sampling Frame and Justification for Stratification, if used. The sampling frame should consist of costs that are essentially alike, or homogeneous, and auditors must document considerations leading to a conclusion that the sampling frame is homogeneous. Stratification consists of partitioning the sampling frame into similar, smaller groups (strata) where a simple random sampling method is used independently to draw samples from each stratum. See CAM 4-602.7(n) and 4-602.8(c)(1)(a), (b), and (c) for

considerations regarding stratification; implementation of stratification requires coordination with a Region/CAD QM Technical Specialist.

(5). Document the Desired Precision, Expected Error Rate/Risk, Tolerable Error Level, Acceptable Number of errors, Confidence Level, and the Resulting Sample Size, as appropriate. Some of these elements are strictly used for variable sampling (desired precision, expected error rate/risk) while other elements are related to acceptance sampling (tolerable error level, acceptance number of errors). Sample sizes should be risk based and sufficiently large enough to reasonably provide sample results reflective of the true sampling frame results. The confidence level for acceptance and variable sampling is set at 90%.

(6). Describe the Sample Selection Method, Random Sampling Seed, and Sample Evaluation Method. The sampling plan must document how the sample items were selected. A statistical sample requires that sample items be randomly selected, and all items must have an equal chance for selection. The audit team will select sample items using the VSAP sampling software when performing Classical Variable Sampling (CVS); auditors are required to coordinate with the HQ-OTS QM Branch for any manual sample selections, which includes all those rare instances when Probability Proportional to Size (PPS) Sampling applications. For acceptance sampling, the auditor will utilize the random numbers application within the VSAP software. The sampling plan must document the process used by the auditor to select sample items, including the random sampling seed used to select sample items. The documentation must be sufficiently detailed to allow for the selection process to be duplicated. The sampling plan should identify, by name, the specific software application used for sample evaluation; use of VSAP software is strongly recommended for sampling applications. Manual evaluations, if appropriate, are required to be coordinated with the HQ-OTS QM Branch.

(7). Document Coordination with the QM Technical Specialist. Auditors must document coordination with the QM Technical Specialist, when required. See CAM 4-602.7 for specific acceptance sampling QM Technical Specialist coordination requirements. See CAM 4-602.8 for specific variable sampling QM Technical Specialist coordination requirements.

4-602.10 Sampling Guidelines**

To achieve a desired level of consistency in sampling applications throughout the Agency, the following practice statements and guidelines have been established.

a. Any items identified for separate review (e.g., outliers, or sensitive items) should be removed from the universe and the results will be appraised separately from the statistical evaluation of the sample result.

b. In conducting sampling, the sampling frame should consist of items that are essentially alike, or homogeneous. The auditor is more likely to achieve acceptable sampling results that are reliable, accurate, and more likely to be sustained when the sampling frame contains homogeneous costs. Therefore, during sample planning the auditor should determine if the intended sampling frame consists of transactions that are sufficiently homogeneous to produce acceptable sampling results. In determining the homogeneity of the potential sampling frame, the auditor should consider the following (this list is not all inclusive):

- Are control and inherent risk approximately the same across all pools, accounts, business segments, etc. that might be included in the sampling frame?

- Are the contractor's policies and procedures governing the costs approximately the same across all pools, accounts, business segments, etc. that might be included in the sampling frame?
- Are applicable criteria (e.g., contract terms, FAR) similar enough across accounts, contracts, years, etc.?

c. Audit Report Narrative. Where sampling methods are used, the resulting audit report must disclose whether the auditor used a statistical sample as a basis for the audit conclusions and will include details concerning the universe, sampling frame, data profiling, items removed from the universe, the sampling method, and sampling unit. The audit report should also state whether stratification was used and the outcome for the sampling application conducted.

4-603 Improvement Curve Analysis and Graphic and Regression Analysis **

Improvement Curves and Graphic and Regression Analysis are forms of statistical modeling. The Agency has developed multiple Guidebooks on these subject topics (see the Improvement Curve and Graphic & Regression Analysis guidebooks for further information). **Effective March 29, 2023, the use of all statistical modeling applications requires approval from the DCAA Quantitative Methods Center of Excellence prior to use, in addition to coordination throughout the application, and approval before audit report issuance. Contact DCAA HQ OTS Quantitative Methods Branch for required assistance.**

4-700 Section 7 - Responsibilities for Detection and Reporting of Suspected Irregularities **

4-701 Introduction **

This section covers procedures, audit guidance, and responsibilities relating to fraud, other unlawful activity, and anticompetitive practices. For unsatisfactory conditions not covered by this section see 4-800.

4-702 Suspected Fraud and Unlawful Activity - General **

4-702.1 General **

a. When auditing a contractor's records in accordance with government auditing standards, auditors may encounter, or receive from other sources, information constituting evidence or causing suspicion of fraud or other unlawful activity. (Examples of other unlawful activity include violations of the [41 USC 8701 - 8707](#) (Anti-Kickback Act), anticompetitive (antitrust) practices, and illegal political contributions.) Sources for such information may include company employees, disgruntled participants, or others making allegations by letter, telephone, personal visit, or through a third party. Such information may pertain to acts of:

(1) military personnel or civilian employees of the Government in their relations with the Government.

(2) military personnel or civilian employees of the Government in their relations with individuals or firms.

(3) individuals or firms in their business relations with the Government.

(4) individuals or firms in their business relations with other individuals or firms doing business with the Government.

b. Definition. For purposes of this chapter, the term "fraud" or "other unlawful activity" means any willful or conscious wrongdoing, including, but not limited to, acts of cheating or dishonesty which contribute to a loss or injury to the Government. Some examples are:

- (1) falsification of documents such as timecards or purchase orders
- (2) charging personal expenses to Government contracts
- (3) submitting false claims such as invoices for services not performed or materials not delivered
- (4) intentional mischarging or misallocation of costs
- (5) deceit by suppression of the truth
- (6) bribery
- (7) corrupt payments which violate the Foreign Corrupt Practices Act
- (8) theft
- (9) a Government employee acquiring a financial interest in or seeking employment with a contractor over whom the employee exercises oversight
- (10) kickbacks
- (11) any unlawful or fraudulent acts resulting from accounting classification practices designed to conceal the true nature of expenses, e.g., classifying unallowable advertising or entertainment costs as office supplies
- (12) product substitution or false certification that tests were performed
- (13) when the contractor is invoicing costs but is delinquent in paying accrued costs in the ordinary course of business
- (14) any attempt or conspiracy to engage in, or use, the above devices

4-702.2 Auditor Responsibilities Related to Fraud **

a. The audit team should design audit procedures to respond to the assessed risks of material misstatement for the subject matter or assertion. The audit team should identify and assess risks of material misstatement as the basis for designing and performing procedures that are responsive to the assessed risk and allow the auditor to obtain reasonable assurance about the subject matter's compliance with the criteria. Refer to 4-702.3 for guidance on assessing the presence of fraud risk indicators/factors.

b. The assessment of the risk of material noncompliance due to fraud is a cumulative process that:

- (1) includes a consideration of risk factors individually and in combination, and
- (2) should be ongoing throughout the audit.

c. The audit team should also exercise:

- (1) due care in planning, performing, and evaluating the results of audit procedures, and
- (2) a proper degree of professional skepticism to achieve reasonable assurance that the

subject matter of the audit is free of material noncompliance due to error or fraud.

d. Auditors are not trained to conduct investigations of fraud or illegal acts. This is the responsibility of investigators or law enforcement authorities. When an auditor obtains information that raises a reasonable suspicion that fraud or other unlawful activity has occurred, or is likely to occur, that has not been previously disclosed to the Government, the auditor should issue an investigative referral (see 4-702.4).

e. The auditor should not defer issuing an investigative referral until completion of the audit. Neither should the referral necessarily take place as soon as the auditor is confronted with a fraud indicator. The auditor should discuss the issue with their supervisor and design procedures to follow up on fraud indicators sufficient to assess the likelihood that then even has or may likely occur. The auditor must avoid the appearance of conducting an investigation. Audit support of investigations is covered in 4-702.6 and 4-702.7.

f. Auditors should document in the working papers and promptly report to FAO management suspected irregularities disclosed through audit steps and procedures, or discovered by an auditor inadvertently (e.g., conversation overheard, information disclosed to an auditor, either in person or through an anonymous tip).

g. Treat as a possible audit lead any allegation received from outside sources, such as telephone calls, anonymous letters, and contractor employees. If there is further evidence available at the FAO to support the allegation and a reasonable basis to suspect fraud or other unlawful conduct, report the suspicions in accordance with 4-702.4. If the allegation provides a reasonable basis to suspect fraud or other unlawful conduct, but there is no further corroborating evidence, relay the allegation using the [DCAA OIG Hotline](#) or the [DoD OIG Hotline](#) (4-702.4a(1)).

4-702.3 Audit Procedures for Responding to Fraud Indicators and Risk Factors **

a. When planning the audit, the audit team should perform information-gathering procedures (IGPs) to gain an understanding about the contractor and its environment. These procedures include management inquiries (4-702.3b), analytical procedures (4-702.3c), audit team discussion(s) (4-702.3d-f), and understanding the relevant internal controls that are relevant to potential fraud risk for the engagement (4-702.3h). The understanding gained from these procedures assist auditors in identifying potential relevant risk factors (4-702.3i-k) and designing audit procedures to detect material noncompliances whether due to error or fraud (4-702.3l-n).

b. Management Inquiries

Management inquiries are very important for effective audit planning because fraud is often uncovered through information received in response to inquiries. The audit team should make the following inquiries of contractor management responsible for the subject matter under audit:

- 1) Their knowledge of any actual, suspected, or alleged fraud or noncompliance with laws and regulations affecting the period of time corresponding to the subject matter under audit (AT-C 205.32);
- 2) Whether any investigations or legal proceedings, that are significant to the engagement objectives, have been initiated or are in process with respect to the period of time corresponding to the subject matter. (GAGAS 7.14);

- 3) Other audits and studies performed by other than DCAA that relate to the subject matter under audit. If yes, have the contractor explain the audits and studies performed, any related findings or recommendations, and any contractor corrective actions taken. (GAGAS 7.13).

The audit team should make these inquiries in every audit. The audit team should use information obtained at annual planning meetings about the contractor's programs and controls that mitigate fraud risk in order to facilitate additional inquiries related to the subject matter under audit. When possible, the audit team should conduct inquiries as part of face-to-face discussions. This provides auditors with an opportunity to measure responses and ask follow-up questions. If there are instances of inconsistent information, the audit team should obtain additional audit evidence to resolve the inconsistencies.

c. Analytical procedures, combined with the audit team's understanding of the contractor and its environment, serve as a basis for additional inquiries and effective audit planning. When the results of analytical procedures differ from expectations, auditors should resolve the differences through further inquiries. While the differences in expectations may not necessarily indicate the existence of fraud, the audit team should be aware that some differences could represent a fraud risk factor and they should respond accordingly.

d. Audit Team Discussion

Prior to, or in conjunction with the information gathering procedures, members of the audit team (at a minimum the auditor and the supervisor) should discuss the potential for material noncompliances due to error or fraud. The discussion should include an exchange of ideas or "brainstorming" among the audit team members about how and where they believe the subject matter under audit might be susceptible to material noncompliances due to error or fraud and how management could perpetrate and conceal fraud.

e. The audit team discussions should include consideration of relevant prior audit experience (e.g., questioned costs, relevant reported estimating or accounting system deficiencies, audit leads) and relevant aspects of the contractor's environment. This includes discussion of the relevant fraud risk factors, other known risk factors, and the audit team's understanding of relevant internal controls. The audit team should document how and when the discussion(s) occurred, the team members who participated, the subject matter discussed, and the outcome.

f. A number of factors will influence the extent of the audit team discussion. For example, if the audit involves more than one location, there could be multiple discussions with team members in differing locations. Another factor to consider in planning the discussions is whether to include specialists assigned to the audit team. For example, if the auditor determines that the team needs a professional, possessing information technology skills, he or she may want to include that individual in the discussion.

g. Fraud Risk Factors

The audit team should be familiar with the [DoDIG Contract Audit Fraud Scenarios](#) and common [Red Flags](#) for fraud indicators. AT-C 205.18 - 23 requires the auditor to identify and assess risks of material misstatement as the basis for designing and performing further procedures that are responsive to the assessed risks and will allow the auditor to obtain reasonable assurance about whether the subject matter is in accordance with the criteria, in all

material respects. Refer to the standard audit programs and the listed CAM sections in the table below for additional risk factors in the following audit areas:

Audit Area	CAM/Guidebook Reference
General	Figure 4-7-3
Contractor Business Systems	5-100
Accounting for Material Cost	6-305
Storing and Issuing Materials	6-312
Labor Cost Charging and Allocation	6-404.6
Floor Checks	6-405.2 & .3
Overtime	6-409.2
Consultant Costs	Selected Areas of Cost guidebook, Chapter 58
Defective Pricing Audits	14-121

h. Certain characteristics or circumstances provide opportunities to carry out fraud. The auditing standards and the DoDIG's [Fraud Detection Resources for Contract Auditors](#) provides contract audit fraud scenarios and [Red Flag Indicators](#) to assist auditors in identifying weaknesses in internal controls that may indicate a fraud risk factor. Common red flag indicators include the lack of segregation of duties, inadequate monitoring by management for compliance with policies, laws and regulations, and lack of asset accountability or safeguarding procedures. The audit team should be aware of these fraud risk factors when obtaining their understanding of relevant internal controls and develop procedures to respond accordingly. The audit team also should keep in mind that the levels of internal control for smaller contractors may be less formal and less structured than at larger contractors. Especially at smaller contractors, auditors should be aware that an *opportunity* to carry out fraud does not necessarily indicate the existence of fraud.

i. Detection of fraud is not an objective of the engagement. The audit team should gain a sufficient understanding of the contractor and its environment through the information-gathering procedures to assess the risk of material misstatement due to fraud and noncompliances. From this assessment, and an awareness of fraud risk factors common to the engagement type (see also the DoDIG Red Flag indicators), auditors should respond to the risks and design overall procedures to detect material misstatements or noncompliances, whether due to fraud or error.

j. The audit team should document: any fraud risk factors identified through the work performed in the engagement, their response to the risk (assessment of impact and procedures designed to address the risk, if any), and reference the working paper where the procedure will be performed. If the team does not identify any risk factors during the risk assessment this should be documented on Working Paper B.

k. Responding to the Presence of Fraud Risk Factors

The audit team should respond to the presence of fraud risk factors by designing audit procedures that (i) impact the overall conduct of the audit (4-702.31); (ii) modify the nature,

timing and extent of the audit procedures (4-702.3m); and/or (iii) address the risk of management override of controls (4-702.3n).

l. AT-C 205.19 - .23 requires auditors to design and implement overall responses to address the assessed risk of material misstatement.

m. Responses that modify the nature, timing or extent of the audit procedures should describe how the standard audit procedures changed to address the risk of fraud. The audit team should document the modifications necessary to address the risk by designing additional or different procedures to obtain reliable evidence or additional corroboration of management's explanations or representations.

n. Management has the unique ability to perpetrate fraud by overriding internal controls that otherwise may appear to be operating effectively. Responses that address the risk of management override of controls generally relate to examining journal entries and other adjustments for evidence of possible material misstatement due to fraud, reviewing evidence of arbitrarily managing contracts to budgets, and evaluating the rationale for significant accounting and organizational changes.

4-702.4 Procedures for Referring Suspected Irregular Conduct **

a. An auditor can encounter information which raises a reasonable suspicion of fraud, corruption, or unlawful activity (see 4.702.3) relating to a Government contract while performing audit fieldwork. Upon encountering or receiving information while performing audit fieldwork, the following steps to complete a referral should be performed; note, there is no requirement for the auditor to prove the existence or intent of fraud to submit a referral. For information received from a contractor representative not related to the audit fieldwork see 4-702.4(e).

(1) Promptly prepare a DCAA Suspected Irregular Conduct Referral Form ([DCAAF 2000](#)). Auditors should not wait until an assignment is completed to prepare the DCAAF 2000. A DCAAF 2000 should be prepared as soon as the suspected irregular conduct has been identified. DCAAF 2000 specifies the information needed by investigators and provides for appropriate consideration of audit impact. A copy of the DCAAF 2000 is included as Figure 4-7-2 and the latest version can be found on the DCAA Intranet.

(a) The auditor may also use the [DCAA Hotline](#) or [DoD Hotline](#) to report suspected irregular activities. When issuing a referral to the DCAA-Hotline or DoD Hotline, a DCAAF 2000 does not have to be used; instead follow the most current guidance issued by the DCAA Hotline or DoD Hotline. However, the use of the DCAAF 2000 is the preferred method for forwarding this information.

(b) DCAAF 2000 may be used to report irregularities affecting non-DoD contracts by following the same procedures for DoD referrals discussed below.

(2) When a DCAAF 2000 is used, fully and concisely describe the irregular conduct including appropriate reference to the procurement regulations or statutes which the auditor believes may have been violated. The auditor should not conduct legal research to identify citations, the use of general references are sufficient. Care should be taken to avoid unnecessary use of legal terminology or numerous enclosures beyond those necessary to explain the irregularity. The purpose of the DCAAF 2000 is to alert an investigator to a possible irregularity, not to establish that the reported irregularity is a violation of the law. If applicable, the FAO should include information on contractor efforts to hinder or obstruct audit work which

uncovered the suspected irregular conduct (see 4-708). Forward the referral to Operations Investigative Support (OIS) Division (see 4-702.4(b)) through the FAO's management. Management review of the DCAAF 2000 prior to formal submission to OIS should be limited to that necessary to ensure clarity and completeness. Management should not dissuade an auditor from completing and submitting a DCAAF 2000.

(3) All referrals are reported to the Inspector General of the agency most at risk.

(4) The auditor's obligation to protect contractor's records from unauthorized access requires that the distribution of documents which appear to provide evidence of impropriety be restricted. Protection and strict control of all information related to the suspected irregular conduct and other contractor irregularities is critical. Premature or inadvertent disclosure could compromise the Government's efforts to gather needed evidence.

(5) To prevent inadvertent disclosure of sensitive information, the draft/official DCAAF 2000 should not be stored in FAO's ECPF system. OIS will maintain an official DCAAF 2000 in accordance with the specified records retention requirements. Auditors should document the irregular conduct in their working papers and document that a referral has been made to OIS; however, auditors should not reference the DCAAF 2000 in the working papers. Auditors should use the standard audit lead sheet (see 4-403(e)(4)) to document relevant information that would likely be useful in the performance of future audits in the CPF system, folder B-07 Fraud Risk.

(6) Continue with assigned duties and pursue development of factual information as appropriate or indicated by 4-702.5. Coordinate any continuing evaluation with your supervisor or FAO manager.

(7) Do not alert the Procuring Contracting Officer, the Administrative Contracting Officer, or contracting office personnel that DCAA has identified suspected irregular conduct and submitted a DCAAF 2000 to investigative agencies without first coordinating with the Justice Liaison Auditor (JLA) at dcaa.belvoir.hq.mesg.dcaa-jla@mail.mil.

b. Submit DCAA Form 2000 (DCAAF 2000) referrals as follows:

(1) For referrals containing unclassified information, the FAO Manager will send an encrypted e-mail, attaching the dated and signed DCAAF 2000 in a Portable Document Format (PDF) file (see 4-702.4(c)) to the JLA at the following e-mail address: dcaa.belvoir.hq.mesg.dcaa-jla@mail.mil.

(2) For referrals containing unclassified information, but originating from Field Detachment activities, the FAO Manager will send an encrypted e-mail, attaching the dated and signed DCAAF 2000 in a PDF file (see 4-702.4(c)) to the JLA at the following e-mail address: dcaa.belvoir.hq.mesg.dcaa-ois-spform2000@mail.mil. Do not send any classified information to this email address.

(3) For referrals containing classified information or on classified programs/contracts coordinate directly with the JLA.

c. Other electronic files such as MS Word, MS Excel, or PDF documents may be included or attached to the DCAAF 2000. However, because DCAAF 2000s are usually transmitted through email, it is recommended that files not exceed 5MB in order to maximize the effectiveness of delivery. Ensure attached files are cross-referenced to information in the

DCAAF 2000 or any detailed narrative of events. Large data files may be referenced in the DCAAF 2000 and made available to investigative agencies upon request.

d. Information and documents, including any internal pages, generated as a result of the activities prescribed above will be marked “CUI” at the top and bottom of the page. In addition, the following verbiage should be added to the bottom right of the page:

Controlled by: DCAA-OIS

CUI Category: LEI

POC: Justice Liaison Auditor 571-448-2322

If the information warrants a security classification, the appropriate security markings will be affixed to the documents.

e. If an auditor is approached by a contractor representative with information which raises a reasonable suspicion of fraud, corruption, or unlawful activity, a DCAAF 2000 should not be used. The auditor should refer the contractor representative to the DCAA Hotline or the DoDIG Hotline to submit a hotline complaint. The DCAA Hotline can be reached at 855-414-5892 or dcaa.belvoir.hq.mbx.oig@mail.mil. The Defense Hotline can be reached at 800-424-9098 or the complaint can be submitted online at <https://www.dodig.mil/Components/Administrative-Investigations/DoD-Hotline/Hotline-Complaint/>. Mailed correspondence should be addressed to the DoD Hotline, The Pentagon, Washington, DC 20301-1900.

4-702.5 Audit Activities Subsequent to Referral - Continuing Audits **

a. Following a referral, or after notification of the initiation of an investigation, take no actions that would compromise an investigation. For example, do not attempt to establish wrongdoing (an investigative responsibility) nor inform the contractor that a fraud referral has been made. Coordinate any potential notification to the procuring or administrative contracting offices regarding the fraud referral with the DCAA Justice Liaison Auditor (JLA) who will recommend a course of action. Continue to follow up on fraud indicators through the normal course of the audit. This is similar to the manner in which a tentative decision to question costs would be followed. Do not expand the audit scope for the sole purpose of gathering additional information to support an investigation. The auditor must avoid the appearance of conducting an investigation. If audit activities relate to an area under investigation or litigation, coordinate with the JLA to determine the best course of action. An example of such an audit activity is the issuance of final audit-determined indirect cost rates. Audit activities outside the area of investigative interest will continue unless the investigative organization requests in writing (e.g., letter or email) that they be deferred or suspended (see also 4-702.5(e)). If it is believed the requested deferral will cause financial harm to the Government or unnecessarily impede the audit mission, elevate the matter for management resolution between the respective organizations. Before any decision is made to defer or suspend an audit, coordinate the matter with Operation Investigative Support (OIS).

b. When requested, auditors should coordinate with OIS to furnish draft copies of any audit reports issued in connection to a submission of a DCAAF 2000 to the appropriate investigative organization. Also, coordinate with the JLA to communicate additional information relating to the suspected wrongdoing or similar misconduct, without filing a separate DCAAF 2000. For all subsequent documents relating to the DCAAF 2000, auditors should reference the DCAA case number assigned by OIS. Note, the DCAA case number should not be documented

in audit working papers. In all future working papers that are applicable, auditors should only document that a referral was made to OIS.

c. Suspected irregular conduct or other unlawful activity may be so serious as to prevent the issuance of an unqualified audit report or lead to a recommendation that contract payments be halted pending resolution. If additional time is required to develop factual information for an audit impact determination, the final audit report can usually be delayed for DCAA-initiated assignments. See 4-702.5(a) and (e) before issuing a report. Examples of such assignments are operations audits, estimating system surveys, or postaward audits. However, when an audit report is scheduled for issuance within a specified time frame (e.g., a report on a price proposal audit) the suspected condition may have a serious impact on the auditor's ability to meet the due date. When this occurs:

- (1) Consult the regional office to determine whether the FAO should qualify the report if the due date cannot be extended and/or if the auditors should question any costs improperly claimed as a result of the suspected wrongdoing.

- (2) Coordinate with the JLA prior to contacting the Procurement Contracting Officer/Administrative Contracting Officer or the representative of a non-DoD agency, as appropriate, to explain the condition and arrange for an extended report due date. The JLA will coordinate with the investigative agency and advise if coordination with contracting personnel is not appropriate, e.g., if the contracting representative may be involved in the suspected unlawful activity.

d. Protect and strictly control all information related to the suspected irregular conduct or other unlawful activity. This is to protect the reputations of innocent persons and ensure that information is not prematurely or inadvertently disclosed to persons suspected of wrongdoing. Premature or inadvertent disclosure could compromise the Government's efforts to gather needed evidence. Control and protect all such information as follows:

- (1) During normal duty hours, keep the documents in an out-of-sight location if the work area is accessible to nongovernment personnel (e.g., contractor personnel).

- (2) After duty hours, place hard copy documents in locked receptacles such as file cabinets, desks, or bookcases. If necessary, relevant information may be stored in the Electronic Contractor Permanent File (ECPF) system, follow procedures in 4-702.4(a)(4).

e. Do not issue an audit report on any part of a representation containing suspected irregular conduct without first coordinating with the JLA (see 2-306.6 or 2-502.7). Normally there is no need to withhold an audit report unless it can be demonstrated that its issuance would hinder an investigation or prosecution. If the FAO believes the audit report should be withheld the FAO or region should coordinate the matter with the JLA. Do not make reference in the audit report to suspected irregular conduct or a referral for investigation.

f. Effective communications throughout the audit is an important aspect of the audit function. Continuous communication keeps the requestor/contracting officer informed of major preliminary audit issues and problems (see 4-100). This includes the suspected irregular conduct, illegal acts, or violations of provisions of contracts. However, it is DCAA policy to promote and maintain strong controls in order to protect the integrity of a potential investigation. The FAO should coordinate with the JLA when situations require communicating these matters with the contracting officer during the investigative agencies assessment period. An example of activities

that may require immediate communication may include final administrative action such as issuance of final audit-determined indirect cost rates or issuance of suspension or disapproval of costs or payments ([DCAA Form 1](#)). Do not communicate the existence of a DCAAF 2000 with the contracting officer without first coordinating with the JLA. Information relating to a matter referred for investigation will be protected and not released or disclosed to a contractor, or a contractor's employee, representative, or attorney. This guidance is based on the need to avoid the disclosure of information which might impede or compromise an investigation. Case-by-case exceptions to this guidance are made by OIS after consultation with the cognizant investigator.

g. Representatives of a contractor seeking protected information relating to a DCAAF 2000 might take unusual measures to contact an auditor. If representatives of a contractor attempt to contact an auditor to obtain information relating to a DCAAF 2000 notify OIS and the region.

4-702.6 Auditor Responsibilities for Ongoing Investigations [](#)**

a. The auditor's responsibility for detecting fraud on any given audit ends with the submission of a DCAA Form 2000 (DCAAF 2000) or Hotline referral. The cognizant investigative agency is responsible for directing, monitoring, and reporting on the status of fraud investigations. Investigative support to DoD investigative organizations is authorized by DoD Instruction 7600.02, "Audit Policies," dated October 16, 2014. The Operations Investigative Support (OIS) Division typically performs this function.

b. FAO auditors should not support fraud related investigations. Instead, auditors should furnish any request for assistance by investigative agencies to OIS. Guidance pertaining to requests from investigative agencies is provided in 1-405. Under no circumstances is the FAO to contact the contractor or access contractor information by any other means to obtain data or other information in support of an investigation.

c. No DCAA employee should inform a contractor that it is under investigation. Contractor documents or information that DCAA has collected in the course of its normal audit activities may be provided to an investigator through the OIS auditor supporting the investigation. Investigative organizations must use their own authority to obtain documents or information for ongoing investigations.

d. OIS will document the meeting date, time and general discussion topic of meetings with DCAA auditors and Government investigative agencies. Relevant documentation will be maintained by OIS.

4-702.7 Control of Documents Obtained Under Inspector General or Grand Jury Subpoenas and Civil Investigative Demands [](#)**

a. For criminal investigative purposes, documents may be obtained under either an Inspector General (IG) or a grand jury subpoena. The civil investigative equivalent of a grand jury subpoena is referred to as a civil investigative demand (CID). DCAA subpoenas will not be used in connection with investigations. When an investigative office obtains documents under an IG subpoena, it is the custodian of the documents. When the documents are obtained under a grand jury subpoena, the grand jury is the custodian and the Government prosecutor or the investigator acts as the grand jury's agent or representative. Similar custodial requirements exist for CIDs. Requirements for safeguarding grand jury materials or CIDs are more stringent than for IG subpoenas.

b. Auditor responsibility for safeguarding contractor records is discussed in 1-507. The auditor is not relieved of responsibility simply because the records in question have been obtained under subpoena or because the contractor itself should be excluded from access to the subpoenaed records. When auditors are assigned to assist an investigation, they should be aware of their responsibility to exercise due care and be mindful that removal of original documents from the designated workplace could result in both significant embarrassment to the Agency and penalties to the auditor.

c. If an auditor is to work directly with an investigator or trial attorney, the acknowledgment of the request for audit services should state that, while the auditor will exercise due professional care, neither the auditor nor the Agency can assume responsibility for the completeness of subpoenaed documents that are not inventoried upon receipt and maintained under appropriate security thereafter.

d. If unsatisfactory conditions are encountered, the cognizant manager or supervisor should advise the head of the investigative agency of the situation in writing. The matter should then be left to the discretion of the investigative office. It is highly unlikely that security problems will arise under a grand jury subpoena; however, in that case, notice of unsatisfactory conditions should be furnished to the trial attorney with a copy to the investigator.

4-702.8 Audit Reports Involving Alleged Subcontractor Fraud **

a. Most fraud statutes provide for measurement of total cost impact to the Government for damages resulting from subcontractor fraud or false statements. For example, a second-tier subcontractor may make a false statement to a first-tier subcontractor resulting in a \$1 million defective pricing. If the first-tier subcontractor and the prime contractor rely on the defective data, the impact to the Government would exceed \$1 million after adding the two additional levels of overhead, G&A, and profit. In this example, the second-tier subcontractor would be liable for the entire cost impact to the Government (plus penalties) even though its gain was only \$1 million. This situation differs significantly from a non-fraudulent defective pricing case where the Government would seek recovery of the entire cost impact from the prime contractor. In non-fraudulent subcontractor defective pricing cases, the audit report procedures described in 10-602b. apply (i.e., subcontract audit reports are provided to the prime contract auditor who issues a consolidated report to the procurement authority).

b. In subcontract fraud matters, auditors at subcontractor locations are usually requested by investigators or attorneys to determine the total cost impact to the Government. In such cases, the auditor supporting the investigation of the subcontractor should assume full responsibility for coordinating all audit activity necessary to respond to the request. Accordingly, the subcontractor investigative support auditor should request audit assistance from FAOs with audit cognizance over any higher-tier contractors and incorporate the results into a single consolidated report or memorandum to the requestor. Use this procedure regardless of the number of higher-tier contractors. As part of this process, the subcontractor investigative support auditor should identify information needed from the higher-tier locations and supply the higher-tier auditors with any data necessary to assist them in their work. In acknowledging the request from the investigators or attorneys, the cognizant investigative support auditor should inform the requestor of arrangements being made for the submission of reports on any:

(1) technical analysis or

(2) evaluations of intracompany or higher-tier contractor additive factors.

c. Resolve any disputes between regions on administrative procedures or technical accounting matters that arise during assist audits in accordance with 6-807.

4-703 Suspected Contractor Provision of Improper Gifts/Gratuities to Government Personnel **

a. The Standards of Ethical Conduct for the Executive branch ([5 C.F.R. Part 2635](#), Subpart B) state that federal employees shall not accept gifts/gratuities directly or indirectly which are given because of the employee's official position or which are given to the employee by a prohibited source. "Direct or indirect acceptance" includes gifts to an employee's parent, sibling, spouse, child or dependent relative given because of the employee's relationship to that other person. "Prohibited sources" are any person or legal entity that:

- (1) seeks official action from the employee's agency;
- (2) does business or seeks to do business with the employee's agency;
- (3) conducts activities regulated by the employee's agency;
- (4) has interests that may be affected by the performance or nonperformance of the employee's duties; or
- (5) is an organization, a majority of whose members fall within any one or more of the prior four categories.

b. The Standards of Ethical Conduct for the Executive branch are found at Chapter 2 of DoD's Joint Ethics Regulation (JER), DoD 5500.7R. Additionally, [18 U.S.C. 203](#) makes it a crime for a Government employee to receive compensation for his or her duties as a Government employee from anyone other than the Government. It also makes it a crime for someone to pay such compensation to a Government employee.

c. A violation of 18 U.S.C. 203 or DoDD 5500.7 may become the subject of an investigation and can result in disciplinary action. DCAA auditors do not have a designated mission to monitor compliance with either the Standards of Ethical Conduct or the statute; consequently, audit programs do not contain specific steps to detect noncompliance. However, any apparent noncompliance coming to your attention, regardless of the length of time since the suspected event occurred, is referable. Be aware, however, that there are exclusions from the definition of a gift and a number of listed exceptions to the gift prohibition including a blanket exception for gifts valued at less than \$20 per occasion and \$50 per calendar year. The exclusions and exceptions are found in Section 204 of 5 C.F.R. Part 2635, Subpart B. Additional exceptions are found in Chapter 2 of the JER. Section 204 of 5 C.F.R. Part 2635, Subpart B also provides exceptions for Federal agency ethics officials to permit the gift of free attendance to a "widely attended gathering" to be accepted by a Federal official when there is agency interest in that employee's participation in the event [e.g. a conference, dinner, reception, etc.] Therefore, be sure to evaluate these exceptions before making a referral. Forward suspected offers or acceptances of gratuities even though no recipient can be identified or no investigative lead is apparent. The requirements for referral of personnel from other Federal agencies who have accepted gifts, gratuities, loans, favors, or entertainment are the same as those for DoD employees (see 4-704).

- (1) The referral (DCAAF 2000 may be used) must contain as much information as is

available. Such information includes the identity of the offeror and recipient (names, position titles, and agency/department or contractor), type of gratuity, range in dollar value of the gratuity or benefit detected, estimated total dollar value, the records reviewed, whether access to any records was denied, and why the auditor suspects that a gratuity was offered or received. Also, state whether the contractor is aware of the condition and, if so, include comments on the nature of corrective action taken or contemplated, including the adequacy of any repayments to the Government.

(2) Do not forward with the referral many copies of essentially duplicative documents from the contractor's records, such as expense vouchers. Instead, forward one or two representative samples of such records along with a listing of pertinent information such as names, dates, and amounts extracted from the records. All copies should be legible. If it is not possible to obtain a legible copy, state this fact in the referral and briefly describe the document.

(3) Send the referral to Headquarters, ATTN: OTS, with copies to the regional director. OTS will review the referral for possible forwarding to the appropriate investigative agency.

4-704 Suspected Violations of the Anti-Kickback Act (41 U.S.C Chapter 87) **

4-704.1 General **

a. The [Anti-Kickback Act](#) (4-7S1) prohibits providing, attempting to provide, or offering to provide any kickback; soliciting, accepting, or attempting to accept any kickback; or including, directly or indirectly, any kickback in the contract price charged by a subcontractor to a prime contractor or a higher-tier subcontractor or in the contract price charged by a prime contractor to the Government.

b. Kickback is defined as any money, fee, commission, credit, gift, gratuity, thing of value, or compensation of any kind which is provided, directly or indirectly, to any prime contractor, prime contractor employee, subcontractor, or subcontractor employee for the purpose of improperly obtaining or rewarding favorable treatment in connection with a prime contract or in connection with a subcontract relating to a prime contract.

4-704.2 Examples of Questionable Practices **

Questionable practices under the Anti-Kickback Act may take such form as: payments of commissions to prime contractor personnel; entertainment provided for prime contractor personnel; loans to prime or higher-tier contractor personnel that may not be repaid and may be later recorded as an expense on the subcontractor's records; and expensive gifts or preferential treatment to particular subcontractors.

4-704.3 Audit Responsibilities **

Ascertain that contractors have informed:

- (1) their personnel who award or administer subcontracts or purchase orders and
- (2) their subcontractors and suppliers about the provisions of the amended Anti-Kickback Act and questionable practices thereunder.

If such action has not been taken by a contractor, recommend that the contracting officer require such action. In addition, cooperate to the extent necessary to ensure that the contractor's procurement personnel are aware of the provisions of the Act.

4-704.4 Referral Requirements **

Because Public Law 99-634, "Anti-Kickback Enforcement Act of 1986," imposes a duty on the contractor to promptly report the possible violation in writing to the Inspector General of the contracting agency, to the head of the contracting agency if the agency does not have an Inspector General, or to the Department of Justice, the contractor has a statutorily imposed duty to self-report. When there is reason to believe that a violation of the Act has occurred, and the cognizant Defense criminal investigative organization has not been notified, the auditor shall promptly prepare a DCAA Form 2000. The Form 2000 will state all known details of the transaction. Coordinate and forward the Form 2000 in the same manner as those on suspected fraud (see 4-702.4).

4-705 Suspected Anticompetitive Procurement Practices **

a. Anticompetitive procurement practices are those designed to eliminate competition or restrain trade. They include those practices or events listed in [FAR 3.303\(c\)](#). They do not include bona fide sole-source procurement actions, violations of the Competition in Contracting Act by the procuring activity, or buying-in by a contractor.

b. If information received from any source indicates suspected anticompetitive procurement practices by a contractor or subcontractor, determine, by appropriate audit techniques, whether sufficient evidence exists to indicate an improper practice. If the anticompetitive procurement practice involves exclusive teaming arrangements, see 4-705c. For all other anticompetitive procurement practices, promptly submit a referral using the procedures set forth in 4-702.4.

c. When auditing a contractor's records, auditors may encounter, or receive from other sources, information constituting evidence or causing suspicion of an anticompetitive exclusive teaming arrangement. Because of the complexity of antitrust laws, the existence of an exclusive teaming arrangement does not necessarily mean an anticompetitive situation exists. An example of an anticompetitive exclusive teaming arrangement is when one company teams exclusively with another company which other potential offerors consider essential for contract performance. The potential for an antitrust violation is present only if one or a combination of the companies participating in an exclusive teaming arrangement is the sole provider of a product or service that is essential for contract performance, and the Government's efforts to eliminate the exclusive teaming arrangement are unsuccessful. Therefore, if the information received from any source indicates an anticompetitive exclusive teaming arrangement, the auditor should promptly notify the contracting officer. If the auditor believes the contracting officer's efforts to resolve an anticompetitive exclusive teaming arrangement are not successful, the auditor will consult with DCAA Headquarters General Counsel for further guidance.

4-706 Suspected Illegal Political Contributions **

4-706.1 The Statute **

a. [Title 52 U.S.C. 30119](#), in essence, prohibits any firm or person contracting with the United States from making a contribution to or expenditure for a political party, committee, candidate for public office, or any person, for a political purpose or use. The statute applies only at the national level, not the state and local levels.

b. The term "contribution" includes:

(1) any gift, subscription, loan, advance, or deposit of money or anything of value made by any person for the purpose of influencing any election for Federal office; or

(2) the payment by any person of compensation for the personal services of another person which are given to a political committee without charge for any purpose.

4-706.2 Methods of Channeling Inappropriate Expenditures **

Corporations that make illegal political contributions may use several means to channel such payments to the intended recipient. Be alert to such methods as:

a. Bonus payments to contractor personnel passed on by the employee as a personal contribution or returned to the company to make the contribution. These payments usually cover taxes paid by the employee. Review carefully any bonus payments which might be based on a formula designed to cover taxes due.

b. Payments to outside consultants or other professional contacts. Such payments may be too high for the service received or there may be no services received at all. Scrutinize high or unusual professional and consultant service expenses for inappropriate expenditures. Such scrutiny involves a comprehensive review of supporting documentation, which should state the extent of services provided.

c. Padding or falsifying expenses paid to employees. Such expenses may include travel, dues, memberships and subscriptions, training, educational expenses, or any expenses where the contractor makes payment based on an invoice from an employee or a close, outside associate.

4-706.3 Audit Responsibilities **

It would be impractical to perform the audit effort necessary to disclose every illegal political contribution. However, government auditing standards require auditors to design audit steps and procedures to provide reasonable assurance of detecting errors, irregularities, abuse, illegal acts, or other unlawful activity that could significantly affect the audit objectives or results of audit (see 4-702.2a).

4-706.4 Referral Requirements **

When a violation of the statute is suspected, submit a report describing all known details of the transaction to Headquarters, ATTN: OIS, for possible referral to the Federal Election Commission. The DCAAF 2000 may be used for this purpose.

4-707 DoD Contractor Disclosure Program **

4-707.1 Introduction **

The [FAR 52.203-13](#) - Contractor Code of Business Ethics and Conduct, requires contractors to timely disclose in writing, credible evidence of certain violations of Federal criminal law or the civil False Claims Act. The contractor's submission of disclosures has been termed the Contractor Disclosure Program within the Department of Defense (DoD), and replaces the predecessor DoD Voluntary Disclosure Program. This section provides guidance and procedures to be followed when DCAA receives a Contractor Disclosure.

4-707.2 Background Information **

a. Section 6102 of Public Law 110-252, Title VI, Chapter 1 "Close the Contractor Fraud Loophole Act," passed by Congress on June 30, 2008, directed the revision of the Federal

Acquisition Regulation (FAR) to require inclusion of provisions that require timely notification by Federal contractors of violations of Federal criminal law or overpayments in connection with the award or performance of covered contracts or subcontracts, including those performed outside the United States and those for commercial items.

b. [FAR 52.203-13](#) “Contractor Code of Business Ethics and Conduct,” became effective December 12, 2008. This regulation is applicable to contracts and subcontracts expected to exceed \$5 million with a period of performance of 120 days or more. Major elements of this regulation include:

(1) Establishing the requirement for a contractor to make timely disclosure, in writing, to the agency Office of the Inspector General (OIG), with a copy to the Contracting Officer, whenever, in connection with the award, performance, or closeout of the contract or any subcontract thereunder, the contractor has credible evidence that a principal, employee, agent, or subcontractor of the contractor has committed:

(a) A violation of Federal criminal law involving fraud, conflict of interest, bribery, or gratuity violations found in Title 18 of the U.S.C.; or

(b) A violation of the civil False Claims Act ([31 USC. 3729-3733](#)).

(2) Requiring certain contractors to establish business ethics awareness and compliance programs and internal control systems.

(3) Providing protection for the information being provided on the disclosure.

(4) Requiring that contractors provide full cooperation to the Government. This means that the disclosure must provide information sufficient for law enforcement to identify the nature and extent of the offense and the individuals responsible for the conduct. It includes providing timely and complete responses to Government auditors’ and investigators’ requests for documents and access to employees with information. However, the rule does not foreclose any contractor’s rights arising in law, the FAR, or the terms of the contract. It does not:

(a) Require a contractor to waive its attorney-client privilege or the protections afforded by the attorney work product doctrine;

(b) Require any officer, director, owner, or employee of the contractor, including a sole proprietor, to waive his or her attorney client privilege or Fifth Amendment rights; and

(c) Restrict a contractor from conducting an internal investigation or defending a proceeding or dispute arising under the contract, or related to a potential or disclosed violation.

c. The [FAR 52.203-13](#) enactment also led to amendments in other parts of FAR by creating additional causes for suspension or debarment actions against contractors (see [FAR 9.406-2\(b\)\(1\)\(vi\)](#) and [9.407-2\(a\)\(8\)](#)). Specifically, a contractor may be suspended or debarred, based upon a preponderance of the evidence, for knowing failure by a principal, until 3 years after final payment on any Government contract, to timely disclose:

(1) A violation of Federal criminal law involving fraud, conflict of interest, bribery, or gratuity violations found in Title 18 of the U.S.C.;

(2) A violation of the civil [False Claims Act](#) (31 U.S.C. 3729-3733); or

(3) Significant overpayment(s) on the contract, other than overpayments resulting from

contract financing payments as defined in [FAR 32.001](#).

d. Contractors make a disclosure with no advance agreement regarding possible resolution of the matter and with no promises regarding potential civil or criminal actions by the Government.

4-707.3 Introduction [](#)**

The Department of Defense revised DoD Directive 5106.01 “Inspector General of the Department of Defense (IG DoD)” assigning the DoD Inspector General with the responsibility to serve as the initial point of contact within the DoD for Defense contractors and subcontractors to disclose potential civil or criminal fraud related matters that affect their contractual relationships with the DoD, and manage the DoD Contractor Disclosure Program. [DFARS 203.10](#) “Contractor Code of Business Ethics and Conduct” implements the program requirements for DoD. Defense contractors and subcontractors must submit the disclosure to the DoD Contractor Disclosure Program Manager, at the DoD Office of the Inspector General at the following address:

Office of the Inspector General of the Department of Defense
Investigative Policy and Oversight
Contractor Disclosure Program Management Office
4800 Mark Center Drive, Suite 11H25
Alexandria, VA 22350-1500

E-mail Address: disclosures@dodig.mil

Information for contractors on the DoD Contractor Disclosure program is available online.

4-707.4 DCAA Responsibility [](#)**

DoD Instruction 5505.15, dated June 16, 2010, establishes policies and assigns responsibilities under the program. In accordance with this instruction, DCAA is assigned two specific responsibilities:

(1) Establish procedures to ensure any contractor disclosure received directly from a contractor is immediately forwarded to the OIG DoD.

(2) Provide audit support to the contracting officer, the OIG DoD, and the Defense Criminal Investigative Organizations (DCIOs).

4-707.5 DCAA Receipt of Contractor Disclosure Procedure [](#)**

a. DCAA should only receive the DoD contractor disclosure from the OIG DoD - DoD Contractor Disclosure Program Management Office (DoD CDPMO). This office will provide the contractor disclosures directly to the DCAA Justice Liaison Auditor (JLA) at Headquarters – Operations. The JLA will be responsible for distribution to DCAA Regions and the cognizant FAOs. The FAO manager should immediately contact the JLA for assistance:

(1) Should a contractor, subcontractor, or its legal counsel provide a contractor disclosure under the DoD Contractor Disclosure Program directly to a FAO.

(2) Should a DoD contracting officer contact the FAO to request audit assistance with a contractor disclosure not previously received by the FAO.

b. The JLA will assist in determining whether the contractor has properly submitted the disclosure to the DoD CDPMO. If not properly submitted, the FAO manager should direct the contractor (by formal letter) to submit the disclosure to the DoD CDPMO. Furnish the DoD CDPMO, the JLA, and when applicable the contracting officer, a copy of any such correspondence. Under no circumstances are DCAA personnel to accept refund checks.

4-707.6 Processing of Contractor Disclosure – General **

a. The JLA will conduct an initial analysis of the contractor's disclosure to determine whether a formal action is required. Factors the JLA will consider include: the nature of the violation being disclosed; the impact or damage to the Government; the impact on current or future audit planning; and the potential that an audit or an assessment could impact ongoing criminal or civil investigations. The JLA will prepare a notification form to the cognizant FAO manager and attach a copy of the contractor disclosure. As soon as practicable, the FAO manager should review the submission to confirm the FAO has cognizance of the contractor and the contractor's books and records that support the contractor disclosure. Contact the JLA should the contractor disclosure need to be redirected to a different FAO.

b. Within 30 days of FAO receipt of the contractor disclosure notification form, the FAO should complete the DCAA Disclosure Response (see example on Figure [4-7-4](#)) and return it to the DoD CDPMO with a copy to the JLA. The purpose of the DCAA Disclosure Response is to acknowledge the FAO's receipt of the disclosure, provide initial information regarding the disclosure (i.e., any prior knowledge/coordination of the disclosure), identify an FAO point-of-contact, and when required, provide an assignment number to document the disposition analysis (see 4-707.6c(2)). The DCAA Disclosure Response is required for each contractor disclosure. Upon receipt of the FAO's completed DCAA Disclosure Response, the DoD CDPMO may directly contact the FAO manager regarding the contractor disclosure. The FAO manager should respond directly to the DoD CDPMO, copying the JLA, with their response to the inquiries.

c. The JLA will classify each contractor disclosure as either: an Information Notification or an Action Required Notification. The following processes will be followed contingent on the type of notification received:

(1) Information Notification. An Information Notification requires no formal action (see example of an Information Notification Form in Figure [4-7-5](#)). However, if the FAO manager determines that a disposition analysis is needed, the FAO manager should immediately contact the JLA for coordination. In such circumstances, follow the same guidance as Action Required Notification below.

(2) Action Required Notification. Contractor disclosures not designated as an Information Notification will be designated as an Action Required Notification by the JLA (see example of an Action Required Notification Form in Figure [4-7-6](#)). Action Required Notifications will require the FAO manager to perform the following actions:

(a) Establish an assignment using Assignment Activity Code 17920. A separate assignment is to be established for each Action Required Notification in part to ensure the program's desired visibility and to serve as the collection point for the continued FAO's activity. Conduct a disposition analysis to determine the best course of action to address the disclosure. A disposition analysis is not an audit risk assessment. A disposition analysis differs from an audit risk assessment because it is less comprehensive in nature. An auditor may conclude after

completing a disposition analysis that a detailed examination of the contractor disclosure is not necessary and that no further action is required based on the risk of the disclosure. The disposition analysis should consider coordination discussions with the cognizant contracting officer (e.g., ACO or PCO) as appropriate. Refer to 4-707.7d for suggested disposition analysis steps.

(b) After completion of the disposition analysis the FAO manager should issue a memorandum to the cognizant contracting officer documenting the results of the disposition analysis and when necessary, include a statement as to the additional actions the FAO will pursue as a result of the contractor's disclosure. Furnish a copy of the memorandum to the DoD CDPMO and copy the JLA. Timely actions will increase the program's success. Therefore, the FAO should complete the disposition analysis and issue the memorandum generally within 60 days after the disclosure is received. Exceptions to the 60 day requirement may include when a contractor makes a preliminary disclosure (see 4-707.7c), when a criminal or civil investigator requests that any actions be postponed due to a pending investigation (see 4-707.8a), or when an FAO has higher work priorities. Other exceptions may be coordinated with the JLA.

(c) The memorandum documenting the results of the disposition analysis should reference the applicable contractor disclosure number on the subject line.

d. All contractor disclosures should be annotated in the Electronic Contractor Permanent File, folder B-06 Audit Leads and should be considered, where applicable, in the risk assessment when planning the scope of future audits.

4-707.7 Guidance on Action Required Notification [](#)**

a. A contractor disclosure received from the JLA as an Action Required Notification should be considered as high audit risk due to the contractor's disclosure of credible evidence of fraud and its potential damage to the Government. For this reason, the FAO should give priority to any required action. An auditor may conclude that a contractor disclosure is other than high risk only after the completion of a disposition analysis. A documented disposition analysis will ensure our audit resources are efficiently used while fulfilling our audit responsibilities under the program.

b. Some examples of criteria for assessing the risk of a contractor's disclosure while performing a disposition analysis may include:

- (1) the nature of the subject matter disclosed,
- (2) financial or monetary degree of damage to the Government,
- (3) prior material weaknesses noted on the relevant control environment, and
- (4) the contractor's degree of compliance with the Contractor's Code of Business Ethics and Conduct Program (see [5-306](#)).

c. The extent of the disposition analysis documentation will depend on the auditor's judgment, keeping in mind that audit resources should be focused on those areas of highest risk. Auditors must use their professional judgment when determining what actions to take.

d. Auditors should also be alert for any contractor preliminary disclosures submitted under the DoD Contractor Disclosure Program. [FAR 52.203-13](#) does not restrict the contractor from examining or investigating the incident internally to determine whether the evidence is

credible (see 4-707.2b(4)(c)). There are instances in which the contractor will choose to disclose the violation to the DoD CDPMO, prior to completing an internal investigation to conclude the nature and extent of the incident. Typically these preliminary disclosures lack the clarity with respect to the underlying facts. Auditors should determine if the contractor is planning or is in the process of performing an internal investigation prior to expending significant FAO resources. Auditors may postpone any further action and defer the disposition analysis until the contractor has completed its internal investigation and has submitted to the DoD CDPMO an updated disclosure documenting the results of the investigation. Notify the JLA that the assignment is being delayed pending receipt of the final disclosure. The disposition analysis should document this interim decision.

e. Consider the internal controls in relation to the contractor's disclosure process and assess control risk. CAM 5-100 may be used to obtain a general understanding and assess control risk. Additional disposition analysis steps may include the following:

(1) Through discussion, inquiries, understanding of the matters disclosed, and a review of the contractor's permanent files, the auditor should have a general understanding of:

(a) how the contractor discovered the disclosed matters;

(b) the contractor's methodology for quantifying the cost impact;

(c) whether the contractor took corrective actions in accordance with the contractor's business ethics awareness and compliance program;

(d) whether the disclosed subject matter is an isolated incident or appears to be systemic in nature, i.e., system deficiencies or material weakness. For example, has the contractor made several disclosures representing a pattern of possible systemic concerns, i.e., has the contractor submitted individual disclosures for numerous instances of labor mischarging at a single contractor facility covering the same time periods?

(e) whether the contractor appears to have included all directly associated costs and related burdens;

(f) whether the contractor appears to have removed expressly unallowable costs associated with the incident, (see [FAR 31.205-15](#)); and

(g) whether the contractor made or is planning to make a refund or credit to the Government and if a refund or credit was made, verification that the Government received the contractor calculated amount.

(2) Identification of completed or in-process audits related to the disclosure;

(3) Determination of the impact on currently planned and in-process audits that may be affected by the disclosed issue; and

(4) Coordination with the contracting officer and when necessary with other Program Stakeholders (i.e., criminal investigators, Government attorneys, etc.) to discuss particular concerns.

f. While materiality is an important factor during the documentation of the disposition analysis, auditors should avoid using solely a predetermined dollar threshold to determine actions required. A dollar threshold implies an arbitrary assessment based exclusively on the monetary impact rather than the nature of the individual disclosure, especially on matters when

other risks are present. For example, an individual disclosure may not reflect the risk that controls may not exist or the risk that the contractor's controls in place will not prevent or detect future incidents on a timely basis.

g. The documentation of audit leads may provide the desired visibility and may be appropriate to conclude the disposition analysis. The Audit Lead sheet preparation and documentation requirements are discussed in [4-403\(e\)\(4\)](#). The final approved audit lead sheet should be attached to the memorandum issued to the contracting officer documenting the completion of the disposition analysis.

h. Coordination with the contracting officer (e.g., ACO or PCO) is essential for the program's success. The [DoDI 5505.15](#) assigns the responsibility to DoD components, except DCAA, to determine whether administrative remedies are necessary when a disclosure is made. Therefore, all actions should be coordinated with the cognizant contracting officer.

i. When an examination of the disclosure is the best course of action as a result of the disposition analysis; the auditor should expand the disposition analysis and conduct an audit risk assessment to establish the scope of audit efforts using the established 17920 assignment. Auditors should not issue a separate memorandum to the contracting officer documenting the results of the disposition analysis, instead the auditor should communicate the commencement of an audit using an acknowledgment letter to the contracting officer. Furnish a copy of acknowledgement letter to the DoD CDPMO and copy the JLA. Reference the applicable contractor disclosure number on the subject line of the acknowledgment letter (see [4-104](#) for the content and format of an acknowledgment letter). The examination will focus on matters disclosed by the contractor and, at a minimum, should include a verification of the completeness and accuracy of the disclosed matters, including any disclosed monetary impact to the Government and whether the contractor made or is planning to make a refund or credit to the Government and if a refund or credit was made, verification that the Government received the contractor calculated amount. Audit reports should reference the applicable contractor disclosure number and be addressed to the cognizant contracting officer. Furnish a copy of the audit report to the DoD CDPMO and copy the JLA. Prepare the audit report using the format in [10-1200](#) making certain that all relevant issues are covered. Do not hesitate to expand the report in the interest of clarity. The FAO can complete audit effort for a number of contractor disclosures under one assignment, ensuring that results are clear and easy to understand for the intended user of the information.

4-707.8 Investigative Support on DoD Contractor Disclosure Program [](#)**

a. DCAA responsibility includes providing support to Defense Criminal Investigative Organizations (DCIOs) (see 4-707.4b). Support to DCIO's will typically be provided by the Investigative Support Division (OIS) as part of the DoD Contractor Disclosure Program. Investigative support responsibilities are discussed in 4-702.6.

b. FAOs have primary responsibility for reviewing contractor disclosures referred to them for action. FAO managers are expected to complete required effort regarding contractor disclosures irrespective of any pending investigations or investigative support being provided by OIS. However, should an FAO manager be contacted by a criminal or civil investigator with a request to postpone or stop their audit efforts to avoid compromising a pending or open investigation, the FAO manager should immediately coordinate the action with the JLA. Audit effort will be postponed or stopped at the request of a criminal or civil investigator or a U.S.

Government attorney. The FAO manager should take no actions that would compromise the investigation. If it is believed the requested deferral will cause financial harm to the Government or unnecessarily impede the audit mission, elevate the matter for management resolution between the respective organizations. Before any decision is made to defer or suspend an audit, coordinate the matter with the JLA.

c. If contacted by DoD investigators or Government attorneys for assistance on contractor disclosure matters, OIS should avoid duplication of efforts and determine if the cognizant FAO may have audits in-process or may have completed any audit efforts that will meet the agent or attorney's request.

4-707.9 Other Special Considerations **

a. Contractor disclosures should not be disseminated outside of DCAA without the prior approval of the DoD CDPMO.

b. When performing an examination of the contractor disclosure, auditors should follow communication requirements with the contractor and contracting officials discussed in 4-100 and 4-300. However, if an auditor becomes aware that the audit relates to any pending criminal or civil investigations, the auditor will coordinate, through OIS, with the DCIO to determine whether any of the audit results or working papers should be first provided to the investigators. The auditor must also determine whether the DCIO will restrict or limit discussions during an exit conference to avoid compromising the ongoing investigation.

c. Contractor cooperation is essential to timely and effective completion of any audit effort. The FAO manager should promptly notify both the DoD CDPMO and the JLA when the contractor fails to cooperate fully as required by [FAR 52.203-13](#) (see 4-707.2b(4)(c)); this will afford an opportunity to resolve the matter before any action to formally report a denial of access to contractor records. If the DoD CDPMO efforts are unsuccessful in resolving the matter, the FAO manager should consider the contractor's lack of cooperation in supporting their disclosure as a denial of access to contractor records and follow the procedures in [DCAA Instruction 7640.17](#), Formal Reporting Procedures for Denial of Access to Contractor's Records. When contractors assert attorney-client privilege, or attorney-work-product doctrine, auditors should observe procedures discussed in [1-504.4g](#). The FAO manager should consider whether the contractor's unsatisfactory cooperation impacts the contractor's current control environment and contractor responsibility for performance on Government contracts (see [5-306.3](#)).

d. Immediately coordinate with the contracting officer, DoD CDPMO, and JLA any significant findings or concerns identified during the disposition analysis or audit of the contractor disclosures. If submitting a DCAAF 2000 to the JLA related to suspected irregular activities not previously disclosed, but related to the contractor's disclosure, identify the related contractor disclosure number on the referral. Procedures for reporting Suspected Irregular Conduct (e.g., DCAAF 2000) are discussed in 4-702.4.

4-708 Obstruction of Audit **

a. [Title 18 U.S.C. section 1516](#) contains an obstruction of audit provision. This provision makes it a crime for a person or corporation to endeavor to influence, obstruct, or impede, with the intent to deceive or defraud the Government, a Federal auditor in the performance of official duties. The purpose of the provision is to punish acts designed to prevent an auditor from discovering or reporting fraud or deceit against the Government. The provision does not make it

a crime to deny an auditor access to records unless the purpose of the denial is to prevent such discovery. Therefore, do not report a suspicion of fraud or other unlawful activity solely on the basis that access to records was denied. Pursue access to records problems in accordance with [1-504.5](#).

b. If there is a reasonable basis to suspect fraud or deceit against the Government and you believe a denial of access to records is an attempt to prevent an auditor from discovering or reporting this fraud or deceit, include this information in a suspected fraud referral (see 4-702.4). The mere denial of access to records, however, is not by itself a reasonable basis to suspect fraud.

c. When reporting suspicions of fraud or other unlawful activity (see 4-702.4), include any information on suspected contractor efforts to influence, obstruct, or impede an auditor with the intent to deceive or defraud the Government.

4-709 Qui Tam Actions Under the False Claims Act [](#)**

Qui tam actions are civil, not criminal, actions, which are brought under the authority of the False Claims Act. In such a suit, the plaintiff brings the action on behalf of the Government. A qui tam suit is filed under seal. The defendant contractor is not provided with a copy of the filing nor is it to be told the contents of the filing while the action is under seal. The Government is furnished a copy of the filing and has 60 days in which to make a decision on whether it will join in the suit. To assist its deliberations, the DOJ will frequently seek information about the defendant contractor from DCAA. Information in our files and working papers is to be made readily available to the attorney handling the case as well as any DoD personnel supporting the attorney. Any requests for additional audit support will be treated as a customer requested assignment. The contractor is not to be informed of the source of these requests without the approval of the requesting attorney. At the same time, the FAO should determine if the attorney has any objections to providing the results of the audit to the contracting officer. If there are none, a report should be sent to the contracting officer. However, the report will caution that the audit was conducted in connection with a qui tam suit and that before any contractual action is taken on the matter, permission must be obtained from the responsible attorney.

4-710 Defense Hotline [](#)**

a. The Defense Hotline is an element of the DoD Inspector General Office of Investigations which receives and reviews audit and investigative leads. The Defense Hotline operates to ensure that allegations of fraud and mismanagement are properly evaluated, substantive allegations are examined, appropriate administrative, remedial or prosecutive actions are taken and administrative procedures are in place and maintained in order to properly manage Hotline allegations. It receives allegations from Government entities such as DoD, from private individuals both inside and outside the Government, and from the GAO. The Hotline assigns review of these leads to the audit or investigative agency it believes is best qualified to determine their validity; monitors the progress of the examination; reviews and analyzes all interim and final reports to determine that the examinations are conducted properly and the appropriate corrective measures were recommended and/or taken; and tabulates and reports case dispositions. DoD instructions pertaining to the Defense Hotline program are discussed in DoDD 7050.1. DCAA responsibilities for reviewing Hotline referrals are set out in [DCAAI 7600.1](#).

b. In accordance with DoD IG Joint Policy Memorandum Number 95-2 dated May 26, 1995,

the DoD Hotline reviews will only be performed by individuals and organizations who are independent. Accordingly, non-government employees and/or organizations, including contractor internal audit groups or external auditors, will not perform any work in relation to any DoD Hotline review because of their inherent lack of independence.

c. The Hotline and the Agency are obligated to protect the anonymity of sources. The Headquarters, DCAA transmittal of a sensitive Hotline referral will make specific reference to nondisclosure requirements in its opening paragraph. Hotline documents arising from such a source are clearly marked. In order to evaluate a Hotline referral, it may be necessary to advise a contractor that an audit lead has been received. However, the auditor should strive to reveal only the minimum amount of information necessary to conduct a proper and thorough review. The Hotline should not be identified as the source of the lead. Under no circumstances may Hotline documents be released outside the Government. Hotline documents may be released within Government channels only to agencies/employees involved in the Hotline review.

d. At its discretion, the Hotline may determine that an allegation lacks significant detail or significant subject matter to warrant formal inquiry. Such a matter will be classified as an information referral. All other referrals are action referrals which are assigned a due date. Hotline referrals are reviewed in Headquarters, OTS, and are forwarded to the cognizant regional office for information or response. The regional office may further delegate responsibility. Delegation of the decision to conduct a field review of an information referral does not convert the status of that referral to an action referral. However, if a field audit is undertaken, results must be reported to the Hotline.

e. All Hotline referrals which have been assigned due dates, either by the Hotline or by Headquarters, are to be treated as customer requested assignments. If a due date cannot be met, an extension should be requested by filing a Hotline Progress Report (DCAAI 7600.1). The Hotline has suggested that six month extension requests reduce unnecessary proliferation of progress reports. It is the responsibility of the Regional Office to assure that Hotline progress and completion reports are issued in the specified format.

f. When a field audit of a Hotline referral involving alleged fraud is undertaken, allegations are to be treated as audit leads and followed up through audit in accordance with 4-702.2c. If a reasonable suspicion of fraud or other unlawful activity remains after performing the appropriate risk assessment and audit steps, arrangements should be made for transfer of the matter to an investigative agency. The responsible field element should discuss the case with the investigative office to which it would have sent a DCAAF 2000 had the allegation arisen through audit. (However, matters first reported through the Defense Hotline are deemed to be known to the Government, and therefore ineligible for reporting on the DCAAF 2000.) Case responsibility may be transferred by submitting a Hotline Completion Report (DCAAI 7600.1) to Headquarters, Attention OTS, setting out the results of audit, the reason(s) for transfer, and the investigative office to which the matter should be transferred.

g. Audit procedures and reporting following transfer of a Hotline referral to an investigative agency should be carried out in accord with 4-702.5. If a transfer is not made, audit findings should be pursued and reported in accord with normal procedures. If available, audit reports containing findings and recommendations which arose from a Hotline referral should be submitted as an enclosure to the Hotline Completion Report.

h. When a referral makes allegations of a technical nature, the assistance of a Government

technical evaluator should be obtained. Occasionally it becomes apparent that the technical evaluator's agency should assume responsibility for the referral, with audit support as needed. When this happens, transfer of responsibility should be formalized similarly to investigative transfer.

4-711 Evaluating Contractor Compliance with Administrative Suspension and Debarment Agreements **

a. Background. Contractors found to have committed fraud or other misconduct sometimes enter into suspension and debarment agreements to avoid being suspended or debarred from obtaining Government contract awards or to be removed from the listing of suspended or debarred companies. These agreements usually require the contractor to implement ethics and fraud prevention programs and strengthen internal controls over the areas where the fraud or other misconduct occurred. Often, the agreements require the contractor to maintain a Hotline for employees to report fraud or other irregularities. Sometimes the costs incurred by the contractor to comply with these agreements are unallowable under [FAR 31.205-47](#). Each Service and the Defense Logistics Agency has suspension and debarring officials or designees who are responsible for monitoring contractor compliance with the agreements.

b. Responsibilities. The suspension and debarring officials or designees will request DCAA audit support to evaluate contractor compliance with any provisions of the agreement that relate to DCAA's audit mission. For example, the auditor will generally be requested to perform an audit if the contractor is identifying and segregating the unallowable costs being incurred to comply with the agreement. If the agreement also provides for the contractor to make improvements to its internal control systems, the auditor will generally be requested to determine if the improvements have been made. The suspension and debarring officials or designees are responsible for assessing overall contractor compliance with the agreement.

c. Briefing of the Agreement and Coordination. At those contractors with suspension and debarment agreements, the FAO should obtain a copy and brief the agreement to identify provisions that fall within DCAA's areas of responsibility. The FAO should then discuss with the responsible suspension and debarring official or designee and the contracting officer the audit services needed to assist in evaluating contractor compliance. Any differences of opinion between the FAO and the suspension and debarring official or designee or any difficulty in arranging a meeting should be communicated through the Regional Office to PPS for resolution. The results of this coordination should be documented in the FAO's audit planning files.

d. Audit Planning. The FAO normally will not have to establish special audits to provide the needed audit support. The audit steps needed to assist the suspension or debarring official or designee in determining compliance with the provisions of the agreement can be usually performed as part of the FAO's regularly scheduled audits; e.g., the FAO's planned audits of internal controls relating to the identification and segregation of unallowable costs. However, if the compliance officer requests a special audit because of his scheduled responsibilities, the FAO should provide the requested services.

e. Corporate Offices. Settlements at the corporate level affecting two or more segments should be coordinated by the corporate auditor or CAC. After the briefing, the corporate auditor or CAC will disseminate the agreement to the segment auditors with an assist audit request (if applicable) on any services needed to assess compliance with the relevant parts of the agreement.

f. Reporting. The FAO should communicate in writing all noncompliances or other concerns with the agreement to the ACO cognizant of the contractor with a copy to the suspension and debarring official or designee. All applicable DCAA audit reports should contain comments on any contractor actions required by a suspension/debarment agreement until the contractor fully implements or complies with the agreement.

g. Excluded Parties Listing. The General Services Administration (GSA) maintains an “Excluded Parties Listing System” in the [System for Award Management](#), which provides data on all suspended and debarred parties. If you are accessing System for Award Management (SAM) from a government computer network, you automatically have access to Entity Management Controlled Unclassified Information data, so DCAA users do not need to register for an account. The site allows data searches via various search criteria, makes available a number of reports in different formats, and provides other useful data. This information is updated continuously. This site is the only source that should be used when checking the suspensions and debarment status of a contractor. A complete user’s manual for SAM is available.

4-7S1 Supplement - Public Law 99-634, Anti-Kickback Enforcement Act of 1986 **

An Act to prohibit kickbacks relating to subcontracts under Federal Government contracts.

[41 USC Chapter 87](#) (Anti-Kickback Enforcement Act of 1986)

Figure 4-7-1 Pro Forma Cautionary Transmittal Memorandum **

MEMORANDUM FOR (name and address of requestor)

SUBJECT: Cautionary Statement Related to Audit Report (audit report number, date and subject, and the contractor's name and location)

The attached audit report addresses certain matters which have raised a suspicion of potential fraud on the part of (indicate the name of the company involved). Specifically, those matters are (provide a brief description of the suspected irregular conduct). We are willing to discuss these matters with you, your counsel, and representatives of the cognizant criminal investigative organization in an effort to reach a proper disposition of these issues in light of the requirements of DoD Instruction 7050.05, Coordination of Remedies for Fraud and Corruption Related to Procurement Activities.

CUI

INSTRUCTIONS

Information which suggests a reasonable basis for suspicion of fraud, corruption, or unlawful activity affecting Government contracts must be reported **promptly**. For reporting purposes, **fraud** is defined as: a **material statement** of fact which is **false**, and **known** to be false. The auditor does not need to nor should the auditor try to prove fraud, which is a matter decided by a court, suspicion is the key here. Other reportable irregularities include Kickbacks, Gratuities, Illegal Political Contributions, Foreign Corrupt Practices Act violations, and Agreements in Restraint of Trade. Activities **NOT** reportable on the Form 2000 include matters such as (1) those already known by the Government, (2) Contractor Disclosures, and (3) unsatisfactory conditions (CAM 4-800).

An effective referral requires close communication between auditors, supervisors and FAO Managers. You may also coordinate with the Justice Liaison Auditor (JLA) if there are any questions about whether or not to refer the matter, keeping in mind the need for **promptness**. Follow instructions in CAM 4-702.4 and DCAAI 7640.15 in preparing the Form. Use continuation pages as necessary, especially for question 5, keeping in mind the need for **conciseness**. See the below instructions for preparing a Form 2000.

- | | |
|---|--|
| <p>1. NAME: (First, Middle, Last). As stated.</p> <p>2. FAO. Enter the Field Audit Office (FAO) name designation.</p> <p>3. RORG NUMBER. Enter your FAO five digit office code, e.g., 0110X.</p> <p>4. CONTRACTOR COGNIZANT RORG. Enter the FAO five digit office code with cognizance of contractor listed in 7 below.</p> <p>5. ORIGINATING ASSIGNMENT. Enter the assignment number, including the office code, where the suspected irregularity was found.</p> <p>6. NAME OF CONTRACTOR. As stated.</p> <p>7. DIVISION. If applicable, enter the contractor's impacted division, subsidiary, Business Unit, etc.</p> <p>8. CONTRACTOR ADDRESS. Enter the contractor's full address, include city, state, and zip code.</p> <p>9. SMALL BUSINESS (8a designation). If known, indicate (YES/NO) when the contractor claims any small business designations, e.g., SBA 8(a) Program, etc.</p> <p>10. PRIMARY CAGE CODE. Enter the primary CAGE Code used by the contractor. DCAA FORM 2000 INSTRUCTIONS, May 2024

CUI

INSTRUCTIONS (Continued)

16. DESCRIPTION OF IRREGULAR CONDUCT. Describe the irregular activity keeping in mind the need for conciseness. The following criteria is recommended: who, what, when, how and how much. Include appropriate reference to the procurement regulations or statutes, which the auditor believes may have been violated. General reference is sufficient, i.e., the auditor is not expected to conduct legal research to identify citations. Other electronic files such as MS Excel or PDF may be attached for clarity purposes. Use the attachments window on Adobe (paper clip icon) to attach any separate files. Because DCAAF 2000s are usually transmitted through e-mail systems, it is recommended that files not exceed 5MB in order to maximize the effectiveness of its delivery. Ensure all attached files are cross-referenced to information on the DCAAF 2000 or any detailed narrative of events.

17. JUSTIFICATION. State the reasons this issue should be treated as other than normal question costs (e.g., if suspected fraud, where is the material statement, which is false, and why do you think it is known by the maker to be false? Expand as necessary in separate document, preferably MS Word. Keep in mind the need for conciseness. See also DESCRIPTION OF IRREGULARITY above.

18. ESTIMATED LOSS. Provide the estimated loss or impact to the government, if known. Explain basis and any reasons for limited current visibility of total losses.

19. DATE. Enter the date the Form 2000 is completed and ready to be submitted to DCAA Headquarters.

20. PREPARER'S NAME. As stated.

21. PREPARER'S SIGNATURE. Use CAC electronic signature.

DCAA FORM 2000 INSTRUCTIONS CONTINUED, May 2024

**Figure 4-7-3 Examples of Characteristics and Types of Activity Associated with
Illegal Expenditures and Acts for Specific Audit Areas [**](#)**

Audit Area	Indicators
Labor	Unexplained changes to timecards transferring hours from commercial firm-fixed-price contracts to Government cost-type contracts.
	Employee time charged differently from associated travel costs.
	Diverting labor from firm-fixed-price contract by reclassifying employees as indirect who provide direct labor to firm-fixed-price contracts.
Material	Significant material requirements charged to Government cost-type contracts where follow-up work shows that the material was not needed.
	Using inferior material on Government contracts that does not meet contract specifications.
	False certification of inspection test results.
Subcontracts	Intercompany profit claimed and billed for an intercompany affiliate that the contractor represented to the Government was an unrelated subcontractor.
Indirect Cost	Overrun contract costs charged to indirect expenses for allocation to other contracts.
	Expressly unallowable costs recorded in accounts that are generally allowable such as small tools and supplies.
	Improper transfers, or recording, of costs to indirect accounts for direct contract costs that are not allowed to be charged under the terms of the contract.
Defective Pricing	See 14-121.2 for listing.
All Audit Areas	Alterations to documents that would result in improper costs claimed for Government contracts.
	Evidence showing that payments were not actually made for the amounts shown on the document.

SECTION C – INFORMATION NOTIFICATION

As part of the Contractor Disclosure Program administered by the Department of Defense Inspector General (DoDIG), we received contractor disclosure _____ (Enclosure 1). The DCAA Justice Liaison Auditor (JLA) conducted an initial analysis of the contractor disclosure and determined that no formal action is required by the FAO. However, if you decide action on the contractor disclosure is warranted, immediately coordinate those actions with the JLA following the guidance outlined in CAM 4-707.

In addition, please complete the following steps:

- 1) Complete the “DCAA Disclosure Response” (Enclosure 2) providing key information that the DoDIG has requested. Please forward the completed form to the DoDIG (CDP@dodig.mil) with a copy to dcaa.belvoir.hq.mesg.dcaa-jla@mail.mil within 30 days from the date of this notification.
- 2) Annotate the contractor disclosure in the Electronic Permanent File for your information and use, where applicable, in the risk assessment when planning the scope of future audits. (Folder B-06 Audit Leads)

Questions concerning this form may be directed to the JLA, at (571) 448-2322 or e-mail dcaa.belvoir.hq.mesg.dcaa-jla@mail.mil.

Figure 4-7-7 DCAA Contractor Disclosure Process and FAO Decision Tree **

4-800 Section 8 - Special Reporting of Unsatisfactory Conditions **

4-801 Introduction **

This section contains guidance and procedures on special reporting requirements on unsatisfactory conditions noted by contract auditors that are not reportable under 4-700, Responsibility for Detection and Reporting of Suspected Irregularities. Unsatisfactory conditions may relate to contractor operations or actions of Government officials.

4-802 Voluntary Refunds for "Windfall Profits" **

4-802.1 Introduction **

[DFARS Subpart 242.7100](#) expresses DoD policy and general procedures on the solicitation or acceptance of voluntary refunds from contractors or subcontractors.

4-802.2 Audit Responsibility – Voluntary Refunds **

When the contract auditor reaches a conclusion pursuant to 4-802.3 that it may be appropriate to seek a voluntary refund, the auditor should observe [DFARS Subpart 242.7100](#) carefully, and inform the cognizant administrative contracting officer, in writing, of this conclusion and its basis, either in an audit report or otherwise.

4-802.3 Audit Procedures **

On audits of any type, auditors should be alert to situations where the Government was overcharged under a contract; was inadequately compensated for the use of Government-owned property, or in the disposition of contractor inventory; and where the contractor's or subcontractor's retention of the amount in question would be contrary to good conscience and equity. If any of these situations are disclosed and it is due, at least in part, to the fault of the contractor or subcontractor, the Government may request a voluntary refund or credit, provided the adjustment is not otherwise required by contractual terms or statutory requirements such as [10 U.S.C. Chapter 271](#): Truthful Cost or Pricing Data (Truth in Negotiations).

4-802.4 Audit Reports **

a. Prepare reports on situations involving voluntary refunds in a narrative format pursuant to [chapter 10](#). A decision to seek a voluntary price adjustment must be approved by the head of the contracting activity, or as provided in department/agency regulations. Therefore, the report or letter should contain sufficient information to permit adequate consideration of the facts and to support a decision at that level.

b. Address a report or letter involving a subcontractor to the contracting officer and forward it through the office which has audit cognizance of the prime contractor. Where audit cognizance has not been established for the prime contract and the prime contractor is not otherwise subject to audit by another audit office, transmit the report directly to the contracting officer in the same manner as if it involved a prime contract.

4-803 Unsatisfactory Conditions (Serious Weaknesses, Mismanagement, Negligence, etc.) on the Part of Contractors **

4-803.1 Introduction **

a. Unsatisfactory conditions, such as repeated and material weaknesses or system deficiencies in accounting or estimating practices, mismanagement or negligence, and failure to

comply with acquisition regulations may result in significant monetary loss or cost to the Government, or frustrate public policy.

b. Unsatisfactory conditions are not to be reported on the DCAAF 2000. Denial of access to records ([DCAAI 7640.17](#)) is an unsatisfactory condition for which a specific remedy (the DCAA subpoena) is available. Neither suspected irregular conduct nor denial of access to records is reportable under this section.

c. Unsatisfactory conditions related to a Government official are discussed in 4-804 below.

4-803.2 Examples of Questionable Practices **

Examples of unsatisfactory conditions in contractor operations include, but are not limited to, the following:

(1) An estimating system and related practices so deficient that price proposals are consistently unreliable, resulting in widespread defective pricing.

(2) Significant and chronic violations of Cost Accounting Standards.

(3) Internal control weaknesses of a magnitude that could cause significant monetary loss to the contractor and excessive cost to the Government.

(4) Excessive or premature contractor reimbursement because of inappropriate application or review of economic price adjustment provisions.

(5) Failure to pay the minimum wages required by [29 U.S.C. Chapter 8](#), [41 U.S.C. 6502](#), or [41 U.S.C. 6701 - 6707](#).

4-803.3 Audit Responsibilities **

a. Serious weaknesses causing major audit problems encountered during audit performance should be discussed with the contractor, the principal cognizant ACO, and the CAD as soon as possible so as to expedite the resolution process. The auditor should not wait until the final exit conference or the issuance of the audit report to convey such findings. All such discussions should be documented by appropriate memorandums or notations in the working papers and a separate audit report issued using the procedures in [chapter 10](#).

b. When an unsatisfactory condition is called to the FAO manager's attention in writing, the FAO manager may:

- determine that no action is required;
- take appropriate action to resolve the condition; or
- determine that the condition cannot be resolved at the FAO level and request regional assistance.

The FAO manager should prepare a memorandum for record documenting judgments and conclusions supporting the choice of alternative. A copy should be furnished to the originator, with an information copy to the RAM, and the original report and the resulting MFR should be retained within an appropriate FAO file.

4-803.4 Headquarters Reporting Requirements **

a. When an FAO encounters unsatisfactory conditions in contractor operations and the issue cannot be resolved at the FAO level, the FAO should involve the regional office promptly.

b. If the condition is not or cannot be corrected after all FAO and regional office efforts have been exhausted, the regional office will prepare a Headquarters report describing the condition along with the actions taken to correct it and submit it to Headquarters, ATTN: Policy and Plans. It is important that the information forwarded to Headquarters is complete and has been reviewed by the Regional Director. Incomplete submissions will be returned to the Region for additional action and result in delaying the resolution of the condition. The following are examples of items to include in the submission to Headquarters; however, it is not an all-inclusive list:

- Audit Reports and/or other documents related to the unsatisfactory condition (to include monetary amounts involved when feasible);
- Timeline that details all actions taken to resolve the issues and result of each action;
- Documentation of all meetings, which will include the names and titles of all participants and a summary of the discussion; and
- All correspondence between DCAA, the contractor, principal cognizant ACO, and the CAC, if applicable.

4-804 Unsatisfactory Conditions (Mismanagement, Negligence, etc.) Related to Actions of Government Officials **

4-804.1 Introduction **

Unsatisfactory conditions include actions by Government officials that appear to reflect mismanagement, a failure to comply with specific regulatory requirements or gross negligence in fulfilling his or her responsibility that result in substantial harm to the Government or taxpayers, or that frustrate public policy. Most unsatisfactory conditions should be handled by the region/FAO elevating the issues through the Government official's management chain. However, for some unsatisfactory conditions an independent assessment is necessary due to the sensitivity or significance of the matter. DCAA will report such conditions to the Department of Defense Inspector General (DoDIG) for appropriate action.

4-804.2 Audit Responsibilities **

a. Auditors should discuss unsatisfactory conditions they encountered with the FAO management and the FAO manager should assess the issues and take the appropriate actions. The FAO manager may be able to resolve some unsatisfactory conditions at the local level. For example, the FAO manager may resolve an issue related to the contracting officer by elevating it to the head of the local procurement office. For unsatisfactory conditions addressed at the FAO level, the FAO manager should take the necessary actions and prepare a memorandum for record (MFR) documenting the relevant facts, including judgments and conclusions supporting the actions taken. A copy should be furnished to the originating auditor for filing in the appropriate FAO file, with an information copy furnished to the RAM.

b. If the FAO's efforts to resolve the issue are unsuccessful or it is determined that the

unsatisfactory conditions should not be handled at the FAO level due to the sensitivity or significance of the matter, the FAO manager should discuss the unsatisfactory conditions with the regional office. Based on these discussions, the region/FAO will determine whether to (1) attempt to resolve the issues at the regional level by elevating the issues through the Government official's management chain, or (2) forward the unsatisfactory conditions to Headquarters for forwarding to the DoDIG for resolution. If the region/FAO determine that the region should attempt to resolve the issue and those regional efforts fail, the issue will be forwarded to Headquarters.

c. Any unsatisfactory conditions forwarded to Headquarters, either for resolution at the Headquarters level or forwarding directly to the DoDIG, will be accompanied by a report prepared by the FAO describing the condition. Before the region submits the report to Headquarters, ATTN: Policy and Plans it is important that the information forwarded to Headquarters is complete and has been reviewed by the Regional Director. Incomplete submissions will be returned to the Region for additional action and result in delaying the resolution of the condition. The following are examples of items to include in the submission to Headquarters; however, it is not an all-inclusive list:

- Audit Reports and/or other documents related to the disagreement (to include monetary amounts involved when feasible);
- Timeline that details all actions taken to resolve the issues and result of each action;
- Documentation of all meetings, which will include the names and titles of all participants and a summary of the discussion; and
- All correspondence between DCAA and the Government official's management chain.

Headquarters will either attempt to resolve the issue at the Government official headquarters level or, if an independent assessment is needed, forward the submission to the DoDIG for appropriate action.

d. This special reporting to the DoDIG applies only to the most significant and sensitive issues. Less significant/sensitive matters should be handled at the local level, elevating the issue to the next higher level of management authority within the Government official's chain of command for appropriate resolution. Examples of the types of unsatisfactory conditions that may warrant an independent assessment by the DoDIG include, but are not limited to, the following:

(1) A contracting officer purposely excludes DCAA from performing or completing an audit to avoid a negative report (e.g., audit report with an adverse opinion).

(2) A contracting officer takes an action grossly inconsistent with procurement law and regulation; e.g., awards a contractor unreasonable or excessive costs and/or profit.

e. Contracting officers have wide authority to make decisions regarding contract matters. DCAA auditors act as advisors to contracting officers. Simple disagreement between the audit position and the contracting officer's decision is not reportable as an unsatisfactory condition.

f. Suspected irregular conduct, e.g., violations of criminal and penal statutory provisions, such as those implemented by the Joint Ethics Regulation, should be reported on the DCAAF

2000 and not as unsatisfactory conditions.

4-900 Section 9 - Requesting Audit Guidance Regional Offices and Headquarters **

4-901 Introduction **

a. This section states policies and procedures for processing requests to regional offices and Headquarters for expert advice, assistance, and guidance on significant auditing and accounting issues. Requirements for feedback to Headquarters on the application of guidance received are also included.

b. The policies and procedures in this section generally do not apply to requests for informal guidance. Informal guidance represents quick comments on an issue without a detailed analysis performed by the regional/Headquarters staff and with no or little management review of the guidance.

4-902 Obtaining Guidance **

4-902.1 Definition **

For purposes of this paragraph, auditing and accounting issues mean any questions involving interpretation of the FAR and DFARS cost principles, Cost Accounting Standards (CAS), Generally Accepted Government Auditing Standards (GAGAS), Generally Accepted Accounting Principles (GAAP), or other applicable laws and regulations relating to the conduct of audits or allowability, allocability, or reasonableness of costs charged to Government contracts.

4-902.2 Background and General Responsibilities **

a. On occasion, field auditors require assistance and advice to help resolve new, unique, complex, or controversial auditing and accounting issues. Before issues are elevated to the region for assistance, the FAO will research the issue by reviewing relevant guidance in CAM, open MRDs, and regulations (e.g., FAR and CAS). FAOs should not research and analyze court cases or regulatory history. When the FAO's research does not adequately resolve the issue, a request for assistance should be submitted to the regional office. The region should thoroughly research the issue using the regional library (except for requests meeting the criteria for the streamlined approach (see 4-902.2c).

b. When the region's research does not adequately resolve the issue, the region should submit an audit guidance request with supporting documentation to Headquarters, DCAA, ATTN: P, using the following format:

(1) SUBJECT. Always start the subject line with the following: "Request for Headquarters Guidance on ..."

(2) Program Area. Identify the major operational area; for example, FAR Cost Principles, CAS, Forward Pricing, Defective Pricing, Comprehensive Labor, etc.

(3) Problem/Issue Identification. Provide:

(a) background information regarding what generated the request;

(b) a clear and succinct statement of the problem/issue, with sufficient information to clearly explain the issue, as well as all relevant facts related to the specific

circumstances; and

(c) specific questions that the region would like addressed in the guidance.

(4) Regional Staff Evaluation. Explain the nature and extent of, and the sources used in, the regional evaluation prior to submission to Headquarters. (Exclude this section when the streamlined approach is used.)

(5) Regional Alternatives. List and explain any alternatives that the regional office may have identified for resolving the issue, including the pro(s)/con(s) of each alternative. (Exclude this section when the streamlined approach is used.)

(6) Regional Recommendation. Identify the solution recommended by the region with the supporting rationale. (Exclude this section when the streamlined approach is used.)

(7) Use of Guidance. Explain how the guidance will be used; e.g., in draft audit report on [subject]; to rebut contractor's response to draft audit report on [subject].

(8) Regional Contact. Identify the regional focal point, telephone number, e-mail, and FAX number.

(9) Regional Working Paper File. Provide with the request the region's electronic assignment file containing working papers and other documents used during its research (as well as any relevant hard copy documents that are not available electronically). This will eliminate the need for Headquarters to duplicate research already performed by the region and should reduce the time and effort required by Headquarters to respond. Applicable working papers and other documents should be referenced in the other sections of the region's request. When the streamlined approach is used (see 4-902.2.c) relevant background documents and other documentation needed to clearly understand the facts should be submitted with and referenced in the request.

c. Streamlined Approach.

(1) For certain types of issues, the region may not be required to perform research prior to submitting its audit guidance request to Headquarters; e.g., where a legal opinion is required; there is an urgent need for Headquarters guidance; there is no current policy covering the issue; or where external agency coordination is required.

(2) Issues that the region believes may be appropriate for the streamlined approach should be discussed with the appropriate Headquarters division as soon as the region has sufficient facts to adequately understand the issue.

(3) If it is determined that the streamlined approach is appropriate, the region should submit a request as outlined in 4-902.2.b, except that only items (1) through (3) and items (7) through (9) need to be included.

d. Headquarters will research Federal laws and regulations, FAR, DFARS, and CAS case history files, decisions of courts and boards of contract appeals, authoritative accounting literature, etc. to develop guidance. When appropriate, legal and/or technical input from outside experts or specialists will be obtained.

e. The proposed guidance will be coordinated with elements of the Office of the Secretary of Defense (OSD), when appropriate.

f. The feedback required by 4-902.4 below will be used to evaluate whether further guidance is needed.

4-902.3 Requesting Guidance For Use Of Legal Citations **

Audit guidance is based on generally accepted accounting principles, applicable Government regulations, and rulings of Boards of Contract Appeals and Federal courts. Often the authoritative source of the guidance (e.g., a board or court case) is cited in CAM and/or specific audit guidance provided by Headquarters in support of the recommended audit conclusion. The guidance stated in CAM and specific audit guidance, including relevant legal citations, should be employed in the audit and explained in the audit report to the extent necessary to support the audit conclusions. When the auditor believes it is necessary to include in the audit report a legal citation not discussed in CAM or Headquarters guidance, the use of the citation must be formally coordinated, through the region, with Headquarters, Policy and Plans Directorate. The Headquarters division responsible for the audit issue will coordinate with our legal advisors and the FAO to ensure that the citation is relevant and properly applied.

4-902.4 Requirements for Feedback to Headquarters **

a. When a guidance memorandum is issued to one region, applicable to a specific issue at a particular FAO, the region should advise the Headquarters division that issued the guidance, of the application of the guidance by forwarding to the appropriate Headquarters division copies of audit reports, memorandums to contracting officers or others, or letters to contractors or others which reflect application of the Headquarters guidance. When a region issues a guidance memorandum to an FAO without Headquarters guidance, the FAO should submit the information listed above to the regional office.

b. Regional offices will also forward to the appropriate Headquarters division copies of any resulting contractor rebuttals, contracting officer comments, related legal opinions, or other comments received that:

(1) could have an impact on the guidance previously provided; or

(2) could lead to the issuance of a general memorandum to all regions and FAOs concerning the issues and related audit guidance.

4-1000 Section 10 - Relying Upon the Work of Others **

4-1001 Introduction **

This section provides guidance for using the work of other auditors. Other auditors' include external auditors (i.e. independent public accountants), government auditors from federal, state, or local agencies, and internal auditors who are employed by the contractor. This section also provides guidance on using the work of other DCAA audit offices through the One Audit Approach and assist audits. For guidance on using the work of Government technical specialists, see [Appendix B](#).

4-1002 Using the Work of External Auditors **

a. An external auditor performs financial statement audits, attestation engagements, or performance audits but is not an employee of DCAA or the audited entity. This section excludes discussion of work by a qualified private auditors performing incurred cost audits pursuant to Section 803 of the FY 2018 NDAA (see 4-1004). Additionally, see 4-1006 for audits performed

by foreign auditors under Reciprocal Agreements.

b. The DCAA auditor should request a copy of the external audit report from the contractor or the audit organization to confirm the audit was performed in accordance with applicable auditing standards (e.g. GAGAS or AICPA standards) and assess whether the work performed by the external auditor relates to the objectives of the current DCAA audit. See 4-202 for guidance on obtaining access to external audit reports. For requests of information when the contractor hired the external auditor to perform the audit, permission must be obtained from the contractor (i.e. audited entity).

c. The decision of how to use the external auditor's work is based on several factors such as the DCAA auditor's involvement in the work, compliance with applicable auditing standards, and relevance to the audit subject matter. The use and reporting of the external auditor's work depends on the following:

(1) If the DCAA auditor assumes responsibility for the work, it requires involvement by the DCAA audit team in the performance of the work such as real-time supervision and review of working papers. When the DCAA auditor assumes responsibility for the work it is not necessary to mention the external auditor in the audit report.

(2) If the DCAA auditor uses the work of the external auditor to provide evidence to support audit conclusions but does not take responsibility for the work performed, the external auditor's name and scope of work performed must be disclosed in the "Report on" section of the audit report. The external auditor information should not be included in the listing of personnel section.

d. The use of the external auditor's work is at the sole discretion of the DCAA audit team. In determining whether or not to use the external auditors work, the DCAA auditor should:

(1) Obtain evidence concerning whether the external auditor's work has been performed under ethics and independence requirements that adhere to federal regulations and auditing standards.

(2) Obtain evidence regarding the external auditor's professional competence.

(3) Evaluate whether the external auditor's work is adequate for DCAA's purposes. This includes determining the nature, timing, and extent of audit procedures performed and, if necessary, reviewing the external auditor working papers.

(4) The extent of the evaluation of the three factors above depends on factors such as if the external auditor is subject to similar quality control policies and procedures, and previous experience with, or knowledge of, the external auditor.

(5) When using another audit organization's work, request a copy of that organization's most recent peer review report. The audit organization should provide this document when requested.

4-1003 Using Contractor Internal Auditors to Provide Direct Assistance [](#)**

a. The DCAA auditor may use the work of internal auditors employed by the contractor on Contractor Business System (CBS) audits through direct assistance. Direct assistance is defined as the use of internal auditors to perform audit procedures, under the direction, supervision, and review of the DCAA auditor that would otherwise be performed directly by a member of the

DCAA audit team.

b. Internal auditors are not independent of the audited entity and should not sign the documentation of independence working paper. Their work must be reviewed and appropriately supervised by the DCAA audit team. The direct supervision of the contractor internal audit staff and other safeguards, as outlined in this section, generally mitigate DCAA's independence risk.

c. The DCAA auditor has the sole responsibility for the opinion expressed and should make all significant judgments, including when to use the work of the internal audit function in obtaining evidence. Significant judgments include:

- (1) Evaluating the adequacy of the contractor's assertion;
- (2) Assessing the risk of material noncompliance; and
- (3) Evaluating the sufficiency and appropriateness of evidence obtained.

d. Prior to using the work of internal auditors the DCAA should perform and document the following:

- (1) Determine the level of competence of the internal audit function as well as the individual auditors providing direct assistance. This includes their level of education, nature of their education (e.g. accounting degrees), and relevant audit experience;
- (2) The extent to which the internal audit function's organizational status and relevant policies and procedures support the objectivity of the internal audit function or internal auditors providing direct assistance;
- (3) The existence of threats to the objectivity of the internal auditors and the related safeguards applied to reduce or eliminate those threats; and
- (4) The internal audit function's use of a systematic and disciplined approach, including its system of quality control.

4-1004 Using the Work of Qualified Private Auditors for Incurred Cost Audits Pursuant to Section 803 of the FY 2018 National Defense Authorization Act (NDAA) **

a. Section 803 of the FY 2018 NDAA allows the Department of Defense to contract with qualified private auditors to perform incurred cost audits. This section discusses the required use of qualified private auditors for incurred cost audits. For all other audits performed by other external auditors, including incurred cost audits not subject to Section 803, see 4-1002.

b. Section 803 of the FY 2018 NDAA states the Secretary of Defense shall consider the results of an incurred cost audit performed under this section without regard to whether the DCAA or a qualified private auditor performed the audit. As part of the contracting process, the qualified private auditor must adhere to certain legal requirements, such as ensuring there is no conflict of interest, auditors have the necessary independence, and the audit firm has a current peer review with a pass rating. Therefore, it is not necessary for the DCAA auditor to perform a separate evaluation of independence and competence to rely on these audits.

c. If qualified private auditors have completed incurred cost audit work pursuant to Section 803, and that work is related to the objectives of the current audit, the DCAA auditor may use the work of the qualified private auditors to support findings and conclusions and thereby avoid

duplication of efforts. Using the work of qualified private auditors generally takes two forms:

(1) The DCAA auditor may rely on the audit report of a qualified private auditor in totality to obtain sufficient and appropriate audit evidence. In this instance, the DCAA auditor relies on the audit opinion and associated subject matter taken as a whole and does not differentiate between different aspects of the subject matter.

(2) The DCAA auditor does not rely on the totality of the subject matter and audit opinion but rather limits the use to certain cost element or aspect of the subject matter. In this instance, the auditor must determine whether the testing performed on the specific element or aspect of the subject matter is sufficient for use in the DCAA audit.

4-1005 Using Work Performed by other DCAA Offices **

When using the work of other DCAA auditors as part of the engagement team, either through the one audit approach or as an assist audit, there is no need to perform additional procedures to determine whether the auditors are independent or competent. All DCAA auditors must adhere to Agency-wide policies and procedures related to independence and are under the same system of quality control. The following list provides commonalities between all DCAA auditors:

(1) The DCAA's quality control system requires all auditors to take annual independence training and evaluate independence using the GAGAS conceptual framework approach.

(2) For each assigned audit, whether directly assigned or through another office, the DCAA auditor must re-evaluate his or her independence and sign an audit specific independence working paper documenting his or her independence in relation to performing that specific audit.

(3) The Agency has established and implemented performance and quality standards, consistent training, and has issued common policy and procedures that further facilitate the use of auditors between offices. Refer to [2-S103.1](#) for additional information on the quality control system for independence and [2-S103.2](#) for competence.

4-1005.1 Using the One Audit Approach **

a. The Agency's One Audit Approach (OAA) may be used when an audit covers multiple geographic locations within the same contractor organization (e.g., business segments, related divisions, and offsite locations) that are operating under one control environment. The OAA method allows the requesting FAO to incorporate audit procedures performed by the assisting FAO into its working papers without a traditional assist audit. FAOs should not use the OAA when an audit of a subcontractor is necessary. It should also not be used when an audit is needed for contractor business units that operate under a different control environment.

b. Using the OAA requires the requesting office to assume responsibility for the work performed by the assisting DCAA office(s). A single risk assessment is performed by the requesting office with input on risk factors from the assisting office, which establishes the overall audit strategy and plan for the expected conduct and scope of the audit. The audit effort of the assisting office does not represent a separate audit. When considering whether to use the OAA audit teams should use professional judgment in applying the following factors that may impact the decision.

(1) The degree to which the specified compliance requirements apply at different contractor locations or business segments (e.g. when performing business system audits);

(2) The similarity of operations over compliance for the different locations (e.g. business segments, related divisions' offsite-locations);

(3) Judgments about materiality;

(4) The degree of centralization of records and supporting documentation and contractor staff;

(5) The effectiveness of the control environment (i.e. particularly management's direct control over the exercise of authority delegated to others and its ability to supervise activities at various locations effectively); and

(6) The nature and extent of operations conducted at the various locations (e.g., business segments, related divisions, offsite locations, etc).

c. The requesting FAO should send an instruction/confirmation memorandum to the assisting office for signature and confirmation by the cognizant assisting FAO manager(s). The memorandum should include or refer to any coordinated audit steps, due dates and other relevant information.

d. When the requesting and assisting offices use CaseWare, the assisting auditor(s) should be added to the CaseWare assignment and input working papers directly into the audit package, unless the assisting office is Field Detachment (FD). When the assisting office is an FD office, the FD office will set-up its own assignment and will not be added to the requesting office's Caseware assignment. The FD office will provide results via memorandum to the requesting office. The requesting office will issue the audit report and include the assisting FAOs (except FD) and any cognizant assisting contracting officers in the report distribution. The FD FAO should not be listed in the report distribution.

e. The supervisor at the assisting FAO will perform a supervisory review of its working papers to ensure that the working papers contain sufficient appropriate audit evidence to support the conclusions reached and achieve the stated objectives prior to submission to the requesting FAO. Once completed, working papers provided by the assisting office should not be changed by the requesting office. If changes are needed prior to the completion of the audit, the changes should be coordinated with the assisting office and the documented concurrence should be included in the working papers. If disagreements arise, the auditors, supervisory auditors, and managers of the two offices should attempt to resolve the disagreement. Refer to 4-409 for information on the documentation of differences of opinion on audit issues.

f. The requesting FAO will have final responsibility of ensuring that the assisting FAO working papers support the overall audit findings and conclusions. Both the requesting and assisting offices should be alert to conditions encountered during the performance of the fieldwork that may impact the previous assessment of risk.

4-1005.2 Assist Audit Approach **

a. The assist audit approach refers to the situation where a DCAA auditor at one location (the requesting office) requests assistance by a DCAA auditor at another location (the assisting office) in the form of an audit report. Each office establishes a separate assignment in EPIC. For assignments other than incurred cost audits, the "assist" engagement should be cross-referenced to the "parent" engagement. Note, the cross-reference field is not currently available for incurred cost audits because an incurred cost audit assignment may support several audits (e.g., a

contractor can have both prime contracts and be a subcontractor).

b. The assist audit approach may be used when an audit covers multiple geographic locations within the same contractor organization (e.g. separate segments, divisions) that are not operating under one control environment. Additionally the assist audit approach may be used when an audit of a subcontractor is necessary to obtain sufficient appropriate audit evidence (e.g. for price proposals where, based on the facts in [9-104.2](#) the government is not relying on the prime contractor's price or cost analysis).

c. Using the assist audit approach, the requesting office should coordinate with the assisting office to communicate the audit needs, including the due date. The requesting office should send a memorandum to the assisting office to request assistance. The requesting memorandum generally should identify the elements of the assertion to be examined under the assist audit (e.g. costs recorded at the off-site location, corporate office costs, Field Detachment cognizant costs, subcontract costs), and provide information to coordinate the assist audit request (e.g. due date requirements). Changes to the request or due date that occur after the issuance of the assist audit acknowledgment letter should be coordinated with the requesting office.

d. Additionally, the requesting and assisting offices should coordinate regarding whether the audit report issued by the requesting office will reference the assist audit report. For example, in relation to assist audits from Field Detachment, consideration must be given to security concerns and the probable need to present audit findings without reference to the classified nature of the awards or without reference to Field Detachment. The coordination between the offices should be documented in the working papers of both audit assignments.

e. The assisting office will issue an audit report to the requesting office and retain its own working papers and audit documentation. The supervisor at the assisting FAO will review the assist audit working papers to ensure that the working papers contain sufficient appropriate audit evidence to support the conclusions reached and achieve the stated objectives prior to submission of the signed audit report to the requesting FAO.

4-1006 Audits Performed by Foreign Auditors under Reciprocal Agreements [](#)**

a. The United States Department of Defense (DoD) has agreements with governments of certain foreign countries to provide contract audit services and other contract administration services without charge. Under these agreements, DCAA performs audits of U.S. companies performing or bidding on contracts of the foreign country and the auditors of the foreign country perform audits of the foreign companies performing or bidding on U.S. Government contracts. The U.S. currently has reciprocal audit agreements with five countries; Canada, United Kingdom, France, Netherlands, and Germany. Audits of foreign companies in countries not covered by reciprocal audit agreements will be performed by the appropriate FAO (e.g. European Branch Office).

b. When audits are performed by foreign auditors under reciprocal agreements, it is generally not possible for the DCAA auditor to perform the procedures required by auditing standards to allow incorporation of the foreign auditors' results into DCAA audit reports because access to the necessary documentation is generally precluded by terms of the agreements and restrictions on disclosing proprietary information. Therefore, DCAA cannot incorporate the results of audits performed by foreign auditors.

c. When requested to audit a contractor submission (e.g., incurred cost or forward pricing

proposal) that includes identifiable costs requiring audit by foreign auditors under a reciprocal agreement, the FAO should coordinate with the contracting officer and communicate the following:

(1) DCAA is unable to perform the procedures required by government auditing standards to allow incorporation of the foreign auditors' results into the DCAA audit report,

(2) The DCAA report opinion will not address the portions of the contractor's submission that are subject to coverage by the foreign auditors.

(3) The contracting officer should use the procedures outlined in the applicable reciprocal agreement to request a separate audit of the foreign company's costs be performed by the foreign auditors. The contracting officer can contact DCMA's [International Command](#) if assistance is needed in obtaining a reciprocal agreement or requesting an assist audit or field pricing assistance.

(4) The contracting officer should request that the foreign auditor's report be sent directly to the contracting officer.

d. In situations where the costs requiring an audit by the foreign auditors cannot be readily separated and therefore a "parts of submission" approach cannot be used (e.g., audits of incurred cost submissions including indirect flow-down costs from a foreign company), the audit report will clearly identify those costs that the FAO did not audit and will qualify the audit report as necessary.

e. In the event the FAO receives the audit report from the foreign auditors, it should be immediately forwarded to contracting officer. Do not incorporate the foreign auditor's audit report results into the DCAA audit report.
